

Getting Started with Electronic Invoicing in Dynamics 365 Finance & Operations

What you really really need to know to get started

GUSTAV SUNDBLAD, SOLUTION ARCHITECT

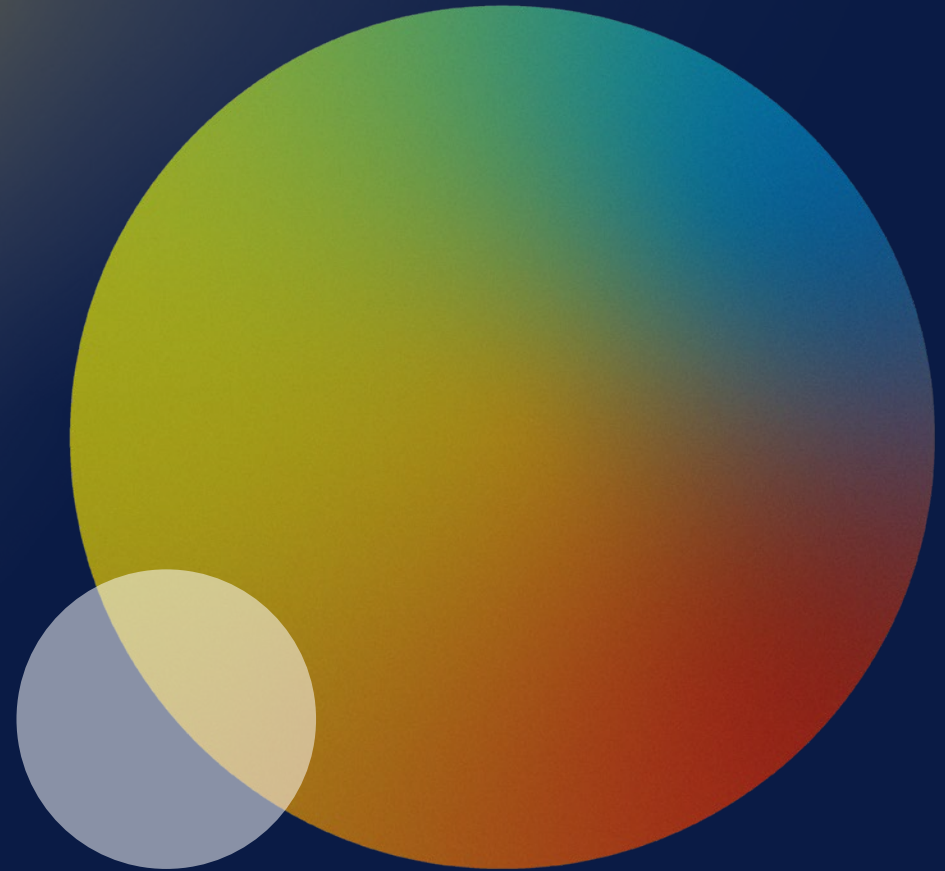

Dynamics 365 ERP Community Call Presentation

Our mission!

Enable electronic customer invoicing

- Deliver invoice to customer
- Understand Electronic Reporting
- Create your checklist and set the plan forward

A brief history

Before the dawn of time

- AIF based exports
- Time consuming
- Development required

Legal requirements

- Mandatory B2B invoicing in many countries
- EU Directive EN16931
- Requirement from many customers/vendors

Pain points

- Master data preparation
- Technical solution
- Varying formats and requirements across countries

The Tools!

Dynamics 365 Finance
and Operations

Validation Tools /
Copilot

Electronic Reporting
Framework

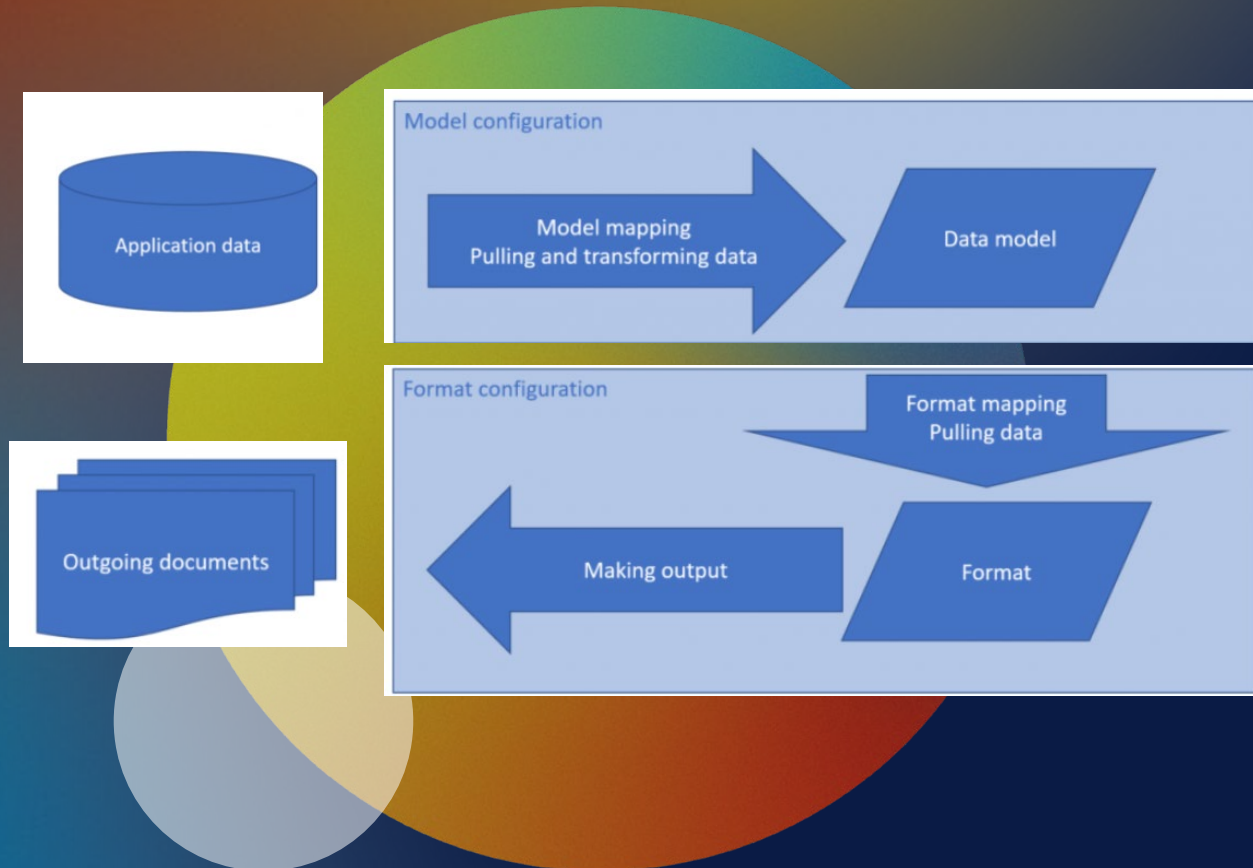

EDI Brokers

E-invoicing add-in

ISVs

Electronic Reporting Framework

"New" framework covering necessary reporting requirements for legal and statistical reporting.

Configurable models and formats that can be used in several scenarios

Low-Code solution in many cases

Using Validation Tools

- ⚠ Tax exempt number for customer 004181 not specified.
- ⚠ Field Contact name must be filled in.
- ⚠ Field Primary contact does not exist in table Customers.

Hide Warnings

XML Structural Validation

UBL 2.1 Invoice

eInvoice standard EN16931 rules (Nov 2023 release)

Flag	Rule id	Message	Location (click on path to display in XML)	Full Location
warning	UBL-CR-601	[UBL-CR-601]-A UBL invoice should not include the InvoiceLine Item ClassifiedTaxCategory TaxExemptionReason	/Invoice[1]	
fatal	BR-CL-23	[BR-CL-23]-Unit code MUST be coded according to the UNECE Recommendation 20 with Rec 21 extension	/Invoice[1]/InvoiceLine[1]/InvoicedQuantity[1]	
fatal	BR-CL-23	[BR-CL-23]-Unit code MUST be coded according to the UNECE Recommendation 20 with Rec 21 extension	/Invoice[1]/InvoiceLine[1]/Price[1]/BaseQuantity[1]	

Masterdata setup is critical

Check validations using tools or Copilot (pro tip!)

Check with your EDI broker

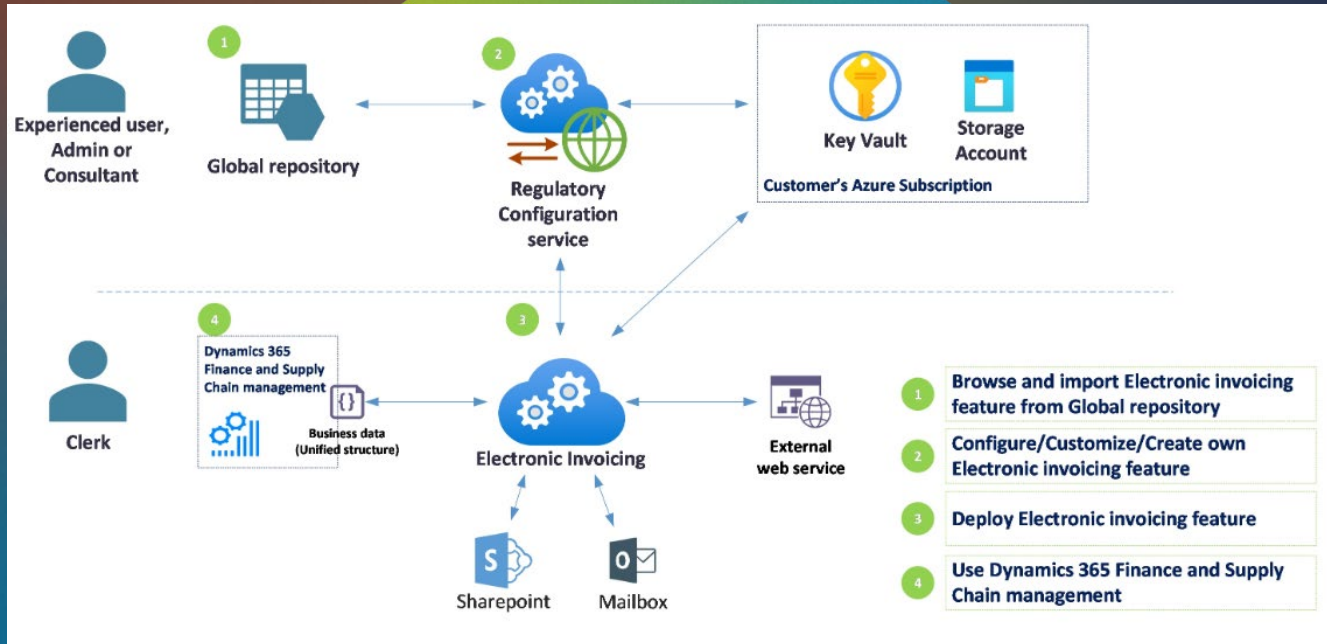

indicating document types such as packing slips at the header level in Peppol BIS Billing is through the XML node:

```
1 <AdditionalDocumentReference>
2   <cbc:ID>OVERRIDE</cbc:ID>
3   <cbc:DocumentType>packing_slip</cbc:DocumentType>
4 </AdditionalDocumentReference>
5
```

- The `cbc:DocumentType` field is used to define the type of document (e.g., `packing_slip`, `email`, `postal`, `peppol`) ¹.
- The `cbc:ID` value `OVERRIDE` is hardcoded to signal that the sender is overriding default channel logic, which is relevant when working with operators like Ropo ¹.

This method allows you to attach metadata about the packing slip directly to the invoice header, ensuring it is recognized by downstream systems or operators.

E-invoicing add-in

A Microsoft managed microservice that can handle much more of the E-invoicing story

Capable to generate, publish and process responses

Has "Last-Mile" connector that together with EDI-broker agreement can submit to EDI network

Monitoring

Electronic Reporting
Jobs

LogicApps/Integration

Print Archive

EDI Brokers

Electronic Document
Log (e-invoice)

Batch jobs / Telemetry
