1.4. Vendor Configuration.....	3
2. VENDOR ONBOARDING PROCESS	6

1.Pre-Setup

To do the Vendor onboarding and further Vendor Collaboration there are some pre-requisite setups need to do. Those are given below: -

- User Workflows
- External Roles
- Vendor creation Workflow
- Vendor Configuration
- Questionnaires

Let's start to do the setups.

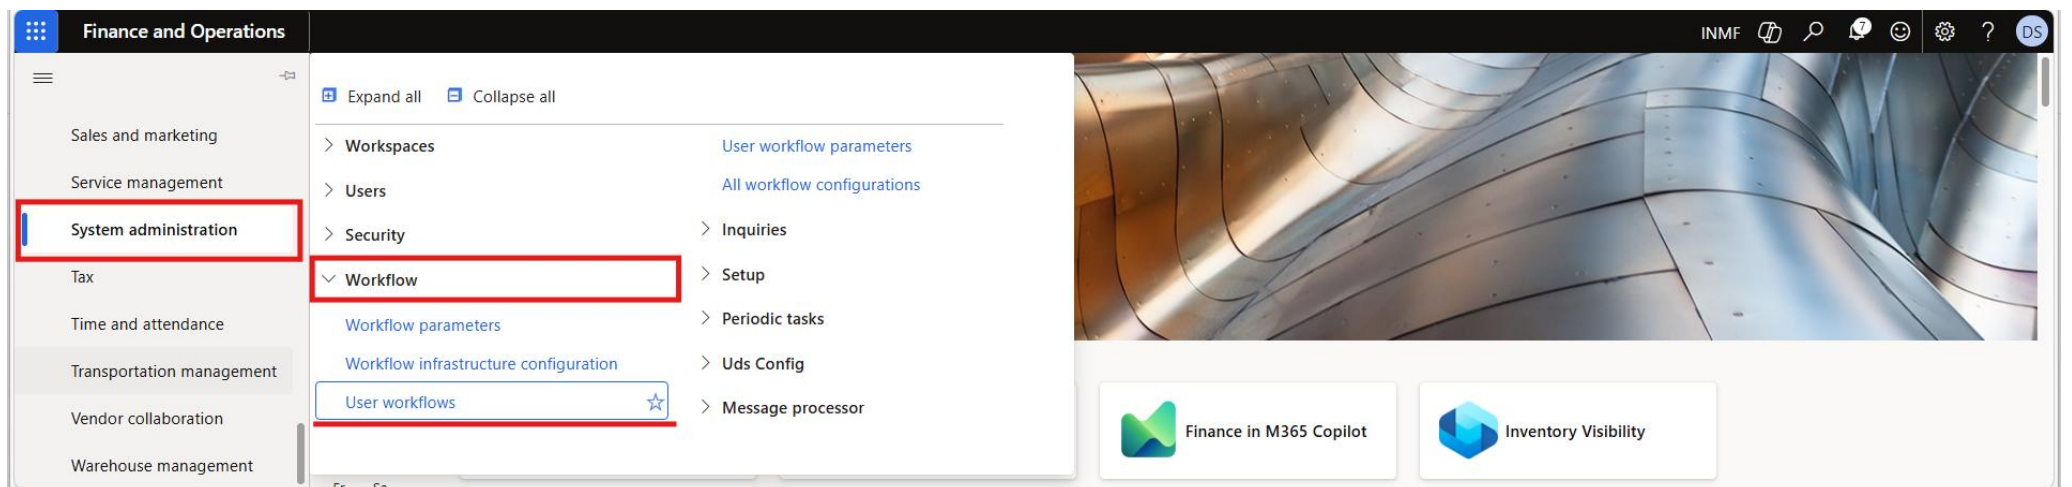

1.1. User Workflows

User workflows in **D365 F&O** are automated processes that manage and control the flow of business documents (like purchase orders, expense reports, invoices) for **approval, review, or task completion**.

Example: A purchase requisition is created → automatically sent to a manager → if approved, sent to finance → finally processed.

Navigate to –

- System administration > Workflow > User workflows**

- Here as you can see in below image that there is a workflow named **Vendor user request (new user or modify user)** so before doing the process you have to check that whether workflow is configured or not.

St...	Default	ID	Name	Association	Type	Instances	Active version
☒	✓	000031	User request workflow	Organization-wide	UserRequestAddUserTemplate	1	1.0.0.0
☒	✓	000201	Vendor user request (new user or modify user)	Organization-wide	SysUserRequestAddUserTemplate	4	2.0.0.0
☒	✓	000202	Vendor user inactivation request	Organization-wide	SysUserRequestInactivateUserTe...	14	1.0.1.0

1.2. External Roles

External Roles in D365 F&O are **security roles assigned to external users (vendors)** via the **Vendor Collaboration / Vendor Portal** to allow limited, controlled system access.

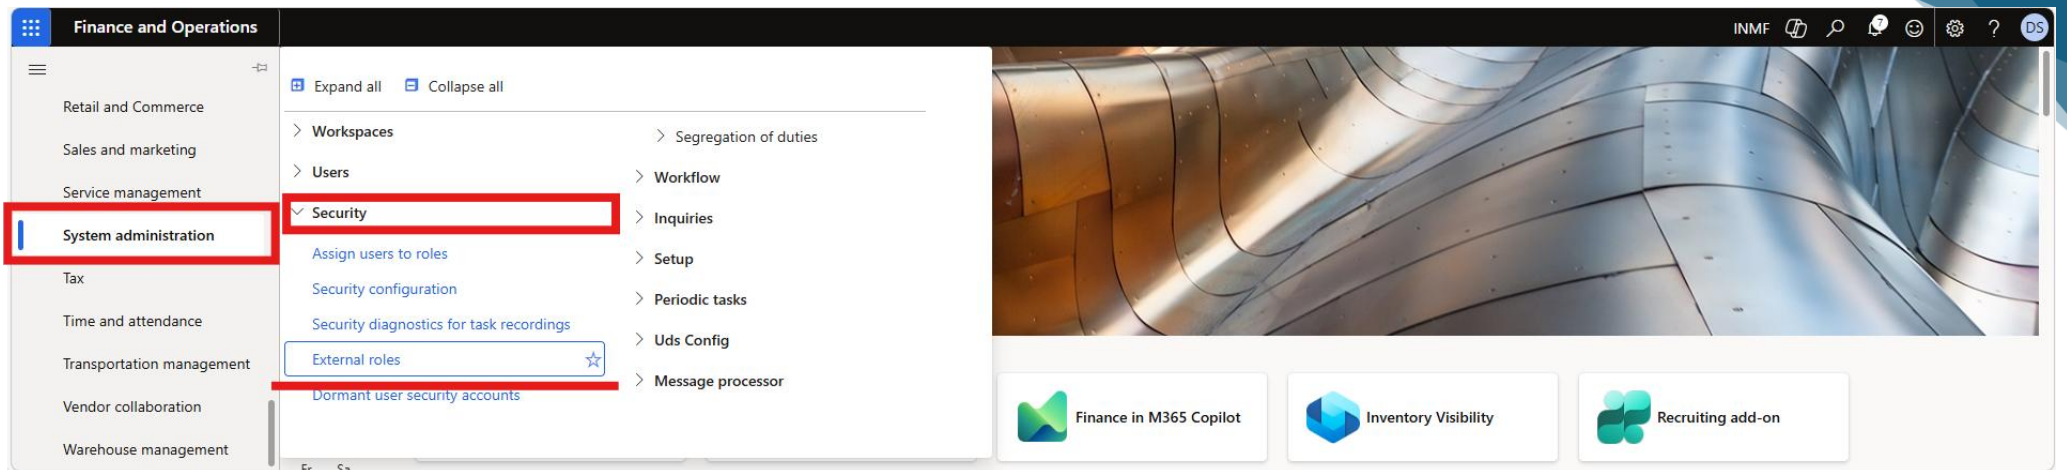

Key Roles (Examples):

- Vendor (External) – Basic access to submit and maintain vendor information.
- Vendor Admin (External) – Can manage users within the vendor company.
- Prospective Vendor – Used during onboarding before approval.

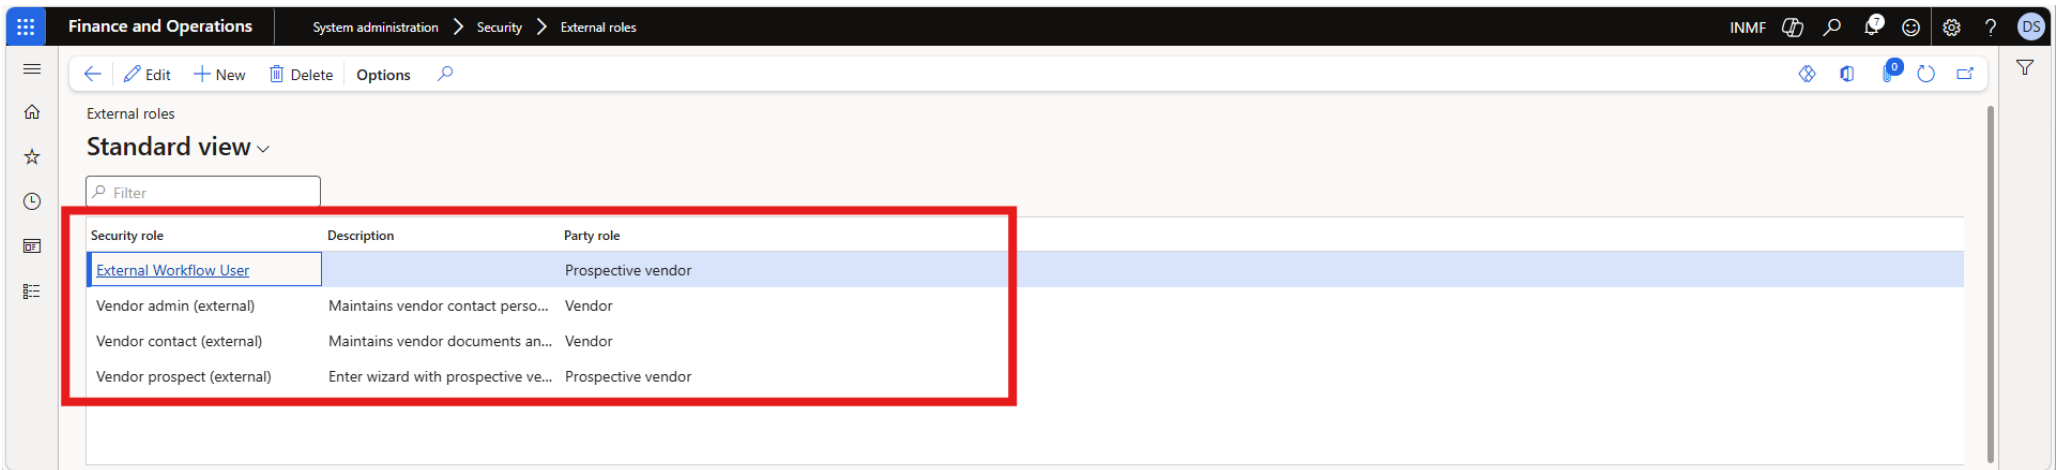

In short, external roles enable vendors to securely **participate in onboarding workflows and manage their data** through controlled portal access.

Navigate to –

- System administrator > Security > External Roles**

- Here you can see the External roles, including the Vendor Prospect role, which will be used for the vendor onboarding process.

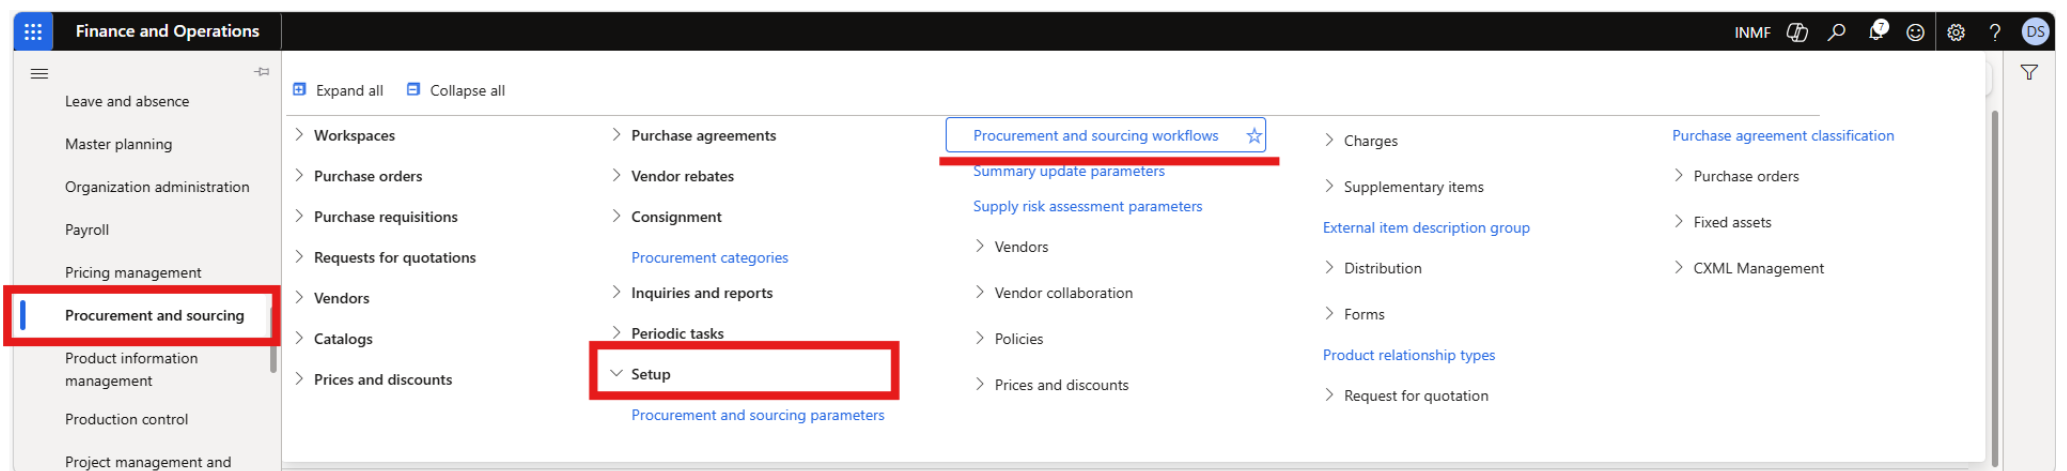

1.3. Vendor creation Workflow

The **Vendor Add Application Workflow** is used to **control and approve new vendor registration requests** during the onboarding process. It ensures that every vendor is **reviewed, validated, and approved** before being created as an active vendor in the system.

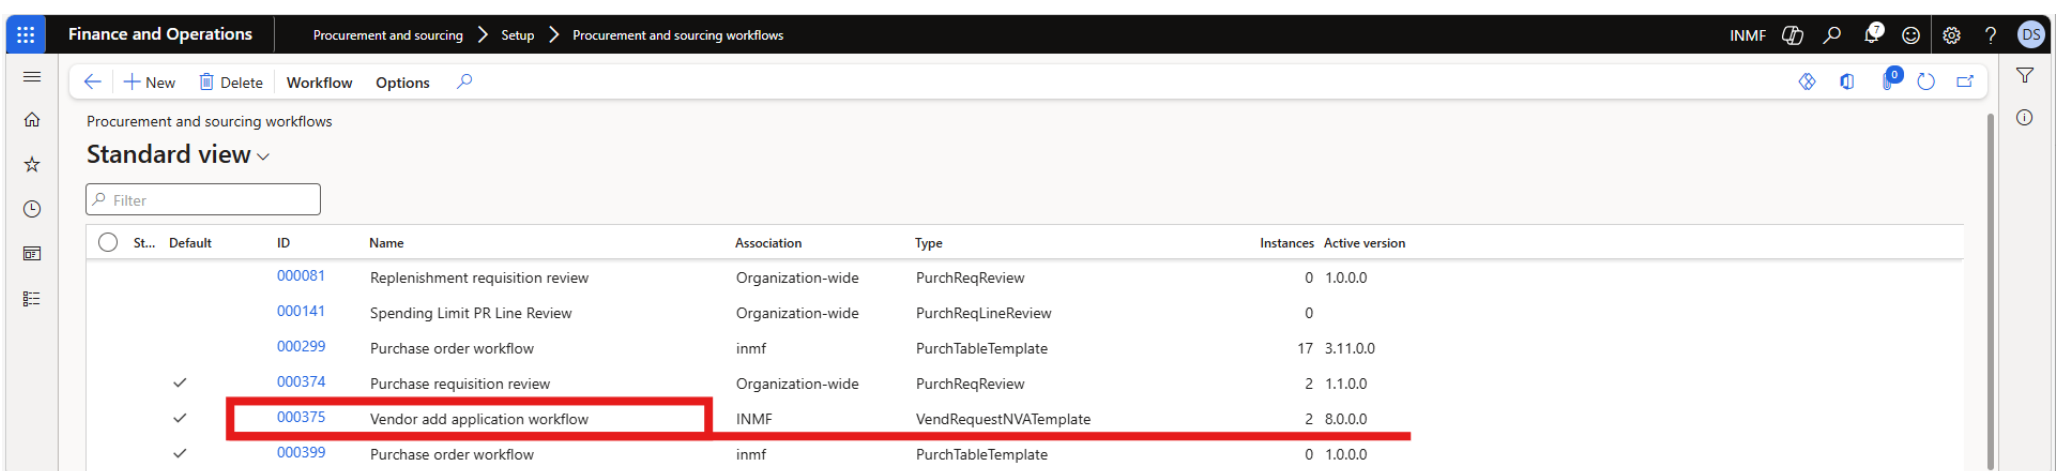

The typical Flow is **Prospective Vendor submits application → Internal review (procurement/finance) → Approval/Rejection → Vendor record created automatically on approval.**

Navigate to –

- **Procurement and sourcing > Setup > Procurement and sourcing workflows**

- Here you can see the **Vendor Add Application workflow** before starting the process, you need to verify whether the workflow is configured or not.

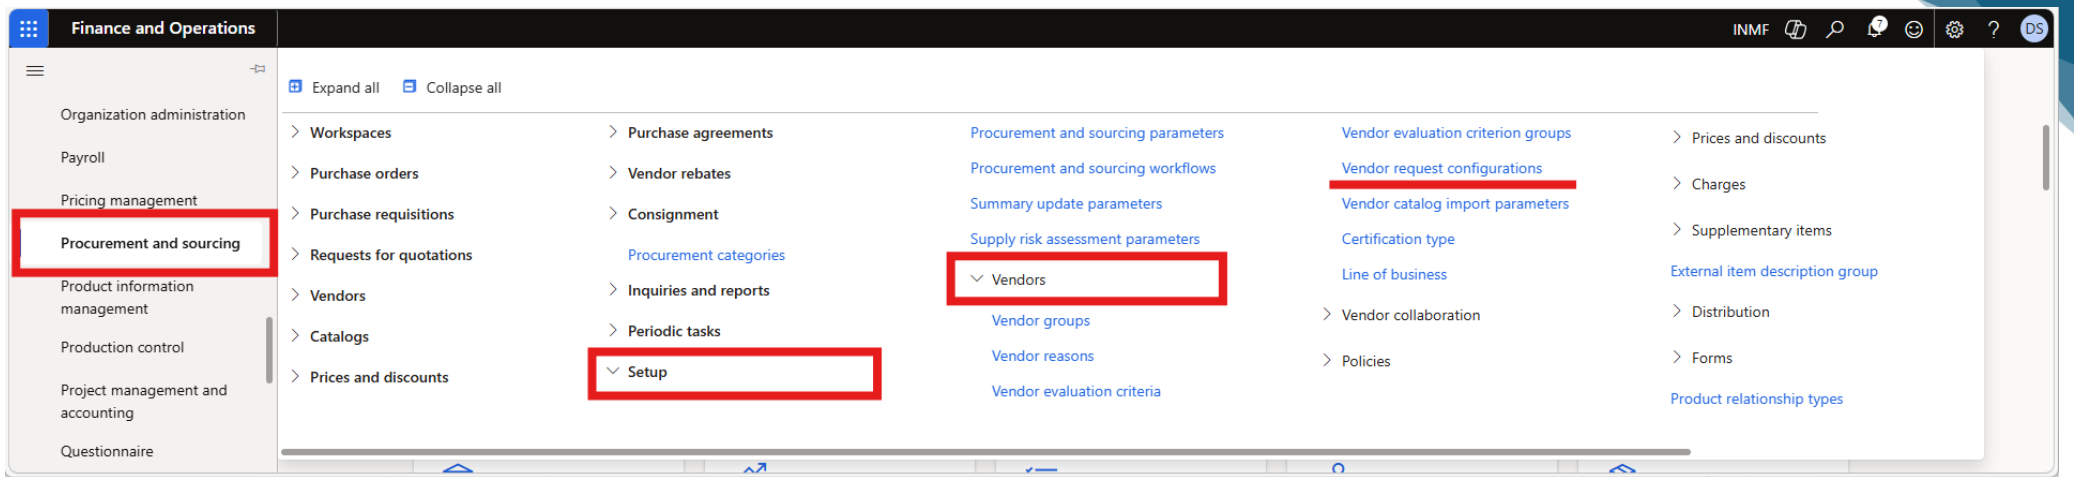

1.4. Vendor Configuration

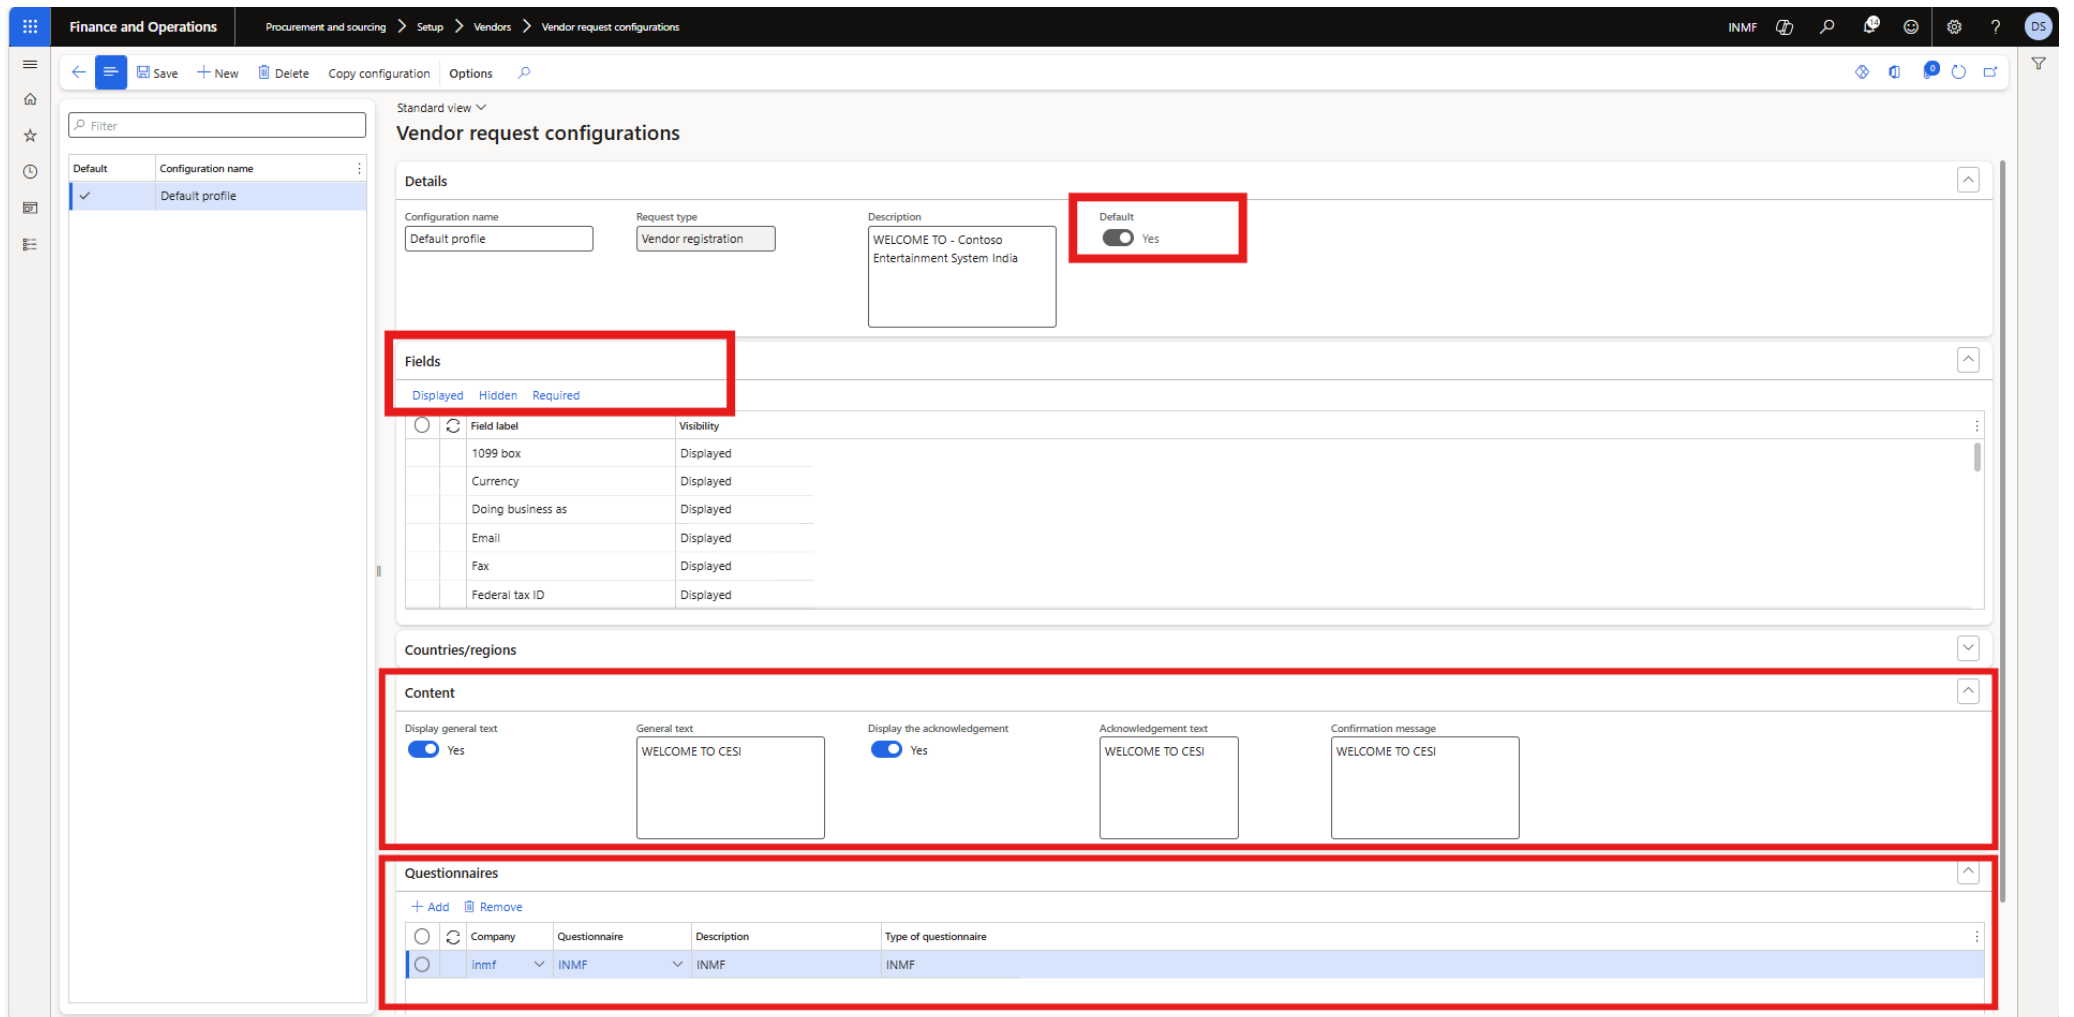

Vendor request configuration controls how **new vendor onboarding requests are created, captured, and processed** in the system. It defines the structure and rules for **collecting vendor information and initiating approval workflows.**

Navigate to –

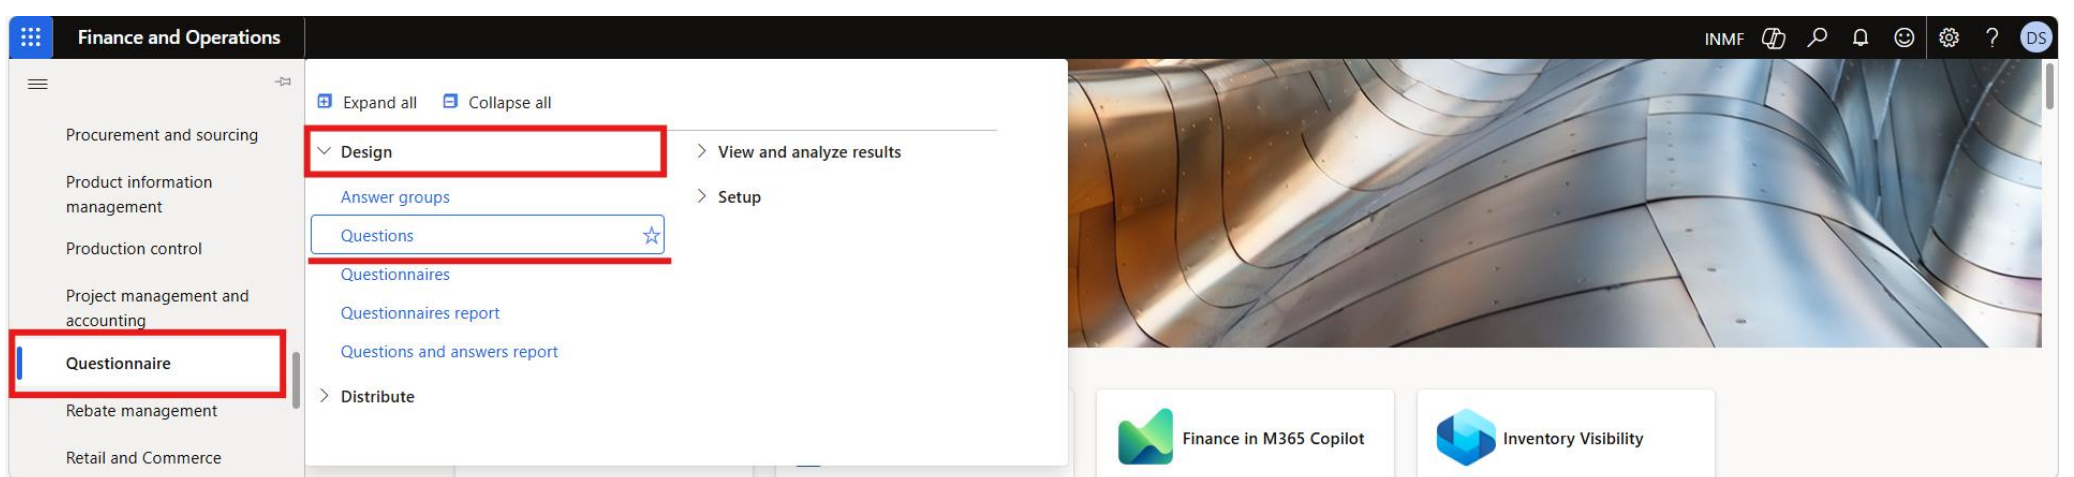

- **Procurement and sourcing > Setup > Vendors > Vendor request configurations**

- This is the **Vendor Request Configuration form**, where you can define what the vendor will see during the registration process. In the Fields tab, you can configure each field as **Hidden, Required, or Displayed**.
- There is a **Content** tab in which you can put text that you want to showcase in vendor registration form.
- There is **Questionnaires** tab in that you can attach questionnaires for vendor registration form.

- For making questions Navigate to - **Questionnaire > Design > Questions**

- There is a **Question type** in which you will define what type of questions this is.
- There is an **Input type** in which you will put what type of answer you want from vendor like **text, integer, real number, date, time and many options** like this.
