Create Functional Location and Install Asset on the Functional Location

Part 3

Rehan Ahmed

Contents

Create a functional location2

Install an asset on a functional location4

Functional locations in Asset Management for Dynamics 365 Supply Chain Management provides your organization the ability to define and track where your assets are located. The benefit of functional locations not only provides traceability, but improves the reporting relationship to work orders, condition and fault assessments, and production stop registrations.

In this module, you will:

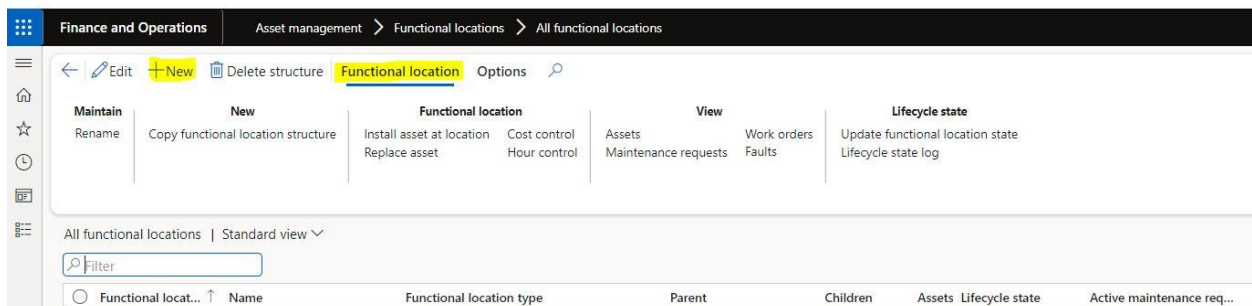

- Discover how to create functional locations.
- Learn how to install assets on functional locations.

Create a functional location

You should set up a location that is used as the default when you create a new asset. Because this location is the default, the functional location can be changed by the user if needed.

Follow these steps to create a default functional location:

1. Go to **Asset management > Functional locations > All functional locations**.
2. On the **All-functional locations** page, select **New** on the **Action Pane**.

3. Type **Production site 1** in the functional location column.
4. Select functional location type **"plant"**

Refer to the screenshot below.

Install an asset on a functional location

Follow these steps to install an asset on a functional location:

- 1. Go to **Asset Management > Functional locations > All functional locations**.
- 2. Select the functional location that you want to install an asset on.
- 3. On the **Functional location** tab on the Action Pane, select **Install asset at location**. The Install asset at location page will display

Follow the screenshot below for more details.
