Enter an addition to a fixed asset

This procedure shows how to add an addition to an existing fixed asset. The purpose of Fixed asset additions is to track item additions, maintenance, or improvements for an asset, and **is informational only**. Any changes to the fixed asset value or service life must be made separately.

The procedure uses the accountant role and demo data for the USMF legal entity.

Go to Fixed assets > Fixed assets > Fixed assets.

In the list, find and select the fixed asset for the addition.

In the list, click the link in the selected row.

On the Action Pane, click Fixed asset.

Click Fixed asset additions.

Fixed assets | Standard view

	Fixed asset number	Name	Fixed asset group	Type	Location
	EY-0001	EY Microsoft dynamics Infrastra...	Salman	Tangible	
☒	EY-02	Lenovo Laptop Thinkpad	Salman	Tangible	
	IP_0001	Iphone-repair machine	Salman	Tangible	

Click New.

In the Name field, type a value.

In the Acquisition date field, set the date of the addition purchase or service.

In the Unit cost field, enter the cost of the item, maintenance, or other improvement for the asset.

In the Quantity field, enter a number. The total cost will have no impact on the value of the fixed asset and is for tracking and informational purposes only. If the cost will be capitalized, then a write-up adjustment transaction must be posted separately.

Addition num...	Name	Acquisition date	Unit cost	Quantity	Total cost
001	Additional SSD	10/6/2023	100.00	20.00	2,000.00

Click the General tab.

Note:

Set Increases service life to Yes if the addition increases the service life of the asset.

This field is informational only. To increase the service life, modify the Service life on the Value models and/or Depreciation books for the asset.

Fixed assets reclassification

Now, we will cover the fixed asset reclassification functionality. This function is used to reclassify a fixed asset to another fixed asset from two perspectives; the first perspective is accounting, and the second perspective is the fixed asset group. The reclassification function incorporates changing the asset group by canceling the old one and creating a fixed asset, and this will generate the necessary financial entries. new

Let's assume that there is a fixed asset in an acquired status, and this asset should be reclassified to a new fixed asset ID. The main account, which represents the acquisition, will also be reclassified to another account. The execution of this process will close the original fixed asset, reverse the acquisition entry of the original fixed asset, and create a new entry representing the new asset acquisition.

Follow these steps to reclassify a fixed asset:

1. Go to Fixed assets > Periodic tasks > Reclassification.
2. In the Fixed asset group field, select the group to reclassify.
3. In the Fixed asset number field, select the fixed asset to reclassify.
4. In the New fixed asset group field, select a group to transfer the fixed asset to.
 - If the new fixed asset group is attached to a number sequence, the New fixed asset number field is updated with the number from the new fixed asset group number sequence. Otherwise, the New fixed asset number field is updated with the number from the number sequence that is set up on the Fixed asset parameters page. If a number sequence is not set up on the Fixed asset parameters page, enter a number in the New fixed asset number field.

5. In the Reclassification date field, enter a date.
6. In the Voucher series field, enter or select a value.
7. Select OK.

Financial dimensions

Dimension values

We didn't find anything to show here.

Set other financial dimension values as appropriate.

All financial dimension values change when a transfer occurs, whether a value has been entered or left blank. For example, if you entered a value for the BusinessUnit and left the CostCenter and Department financial dimensions blank. If your account structure allows blank values for CostCenter and Department, the transfer would result in each value model having the new value for BusinessUnit and a blank value for CostCenter and Department.

Click Update.

Fixed asset transfer confirmation

This transfer will change the default financial dimensions for the selected fixed assets and create accounting entries in the journal.
