

How to Generate Fixed Asset Barcodes in Microsoft Dynamics 365 Finance and Operations (D365 F&O)

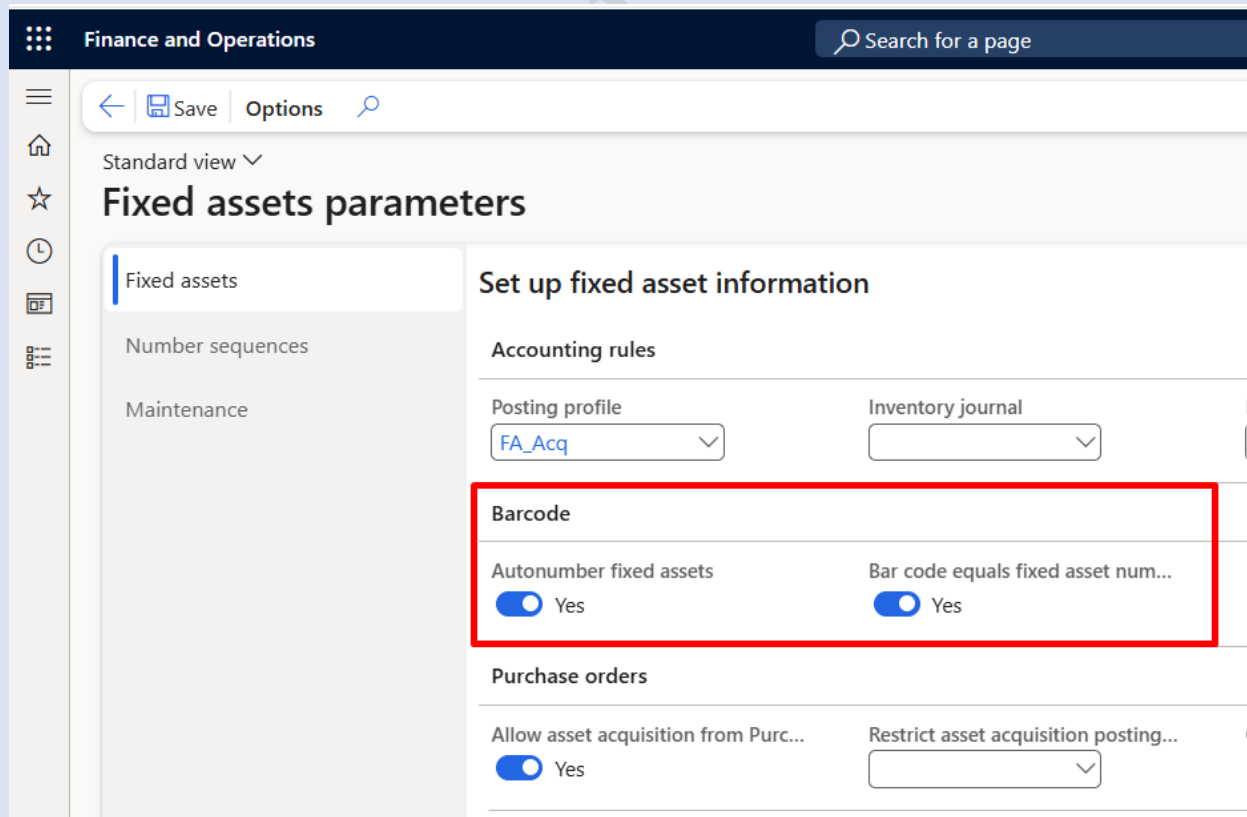

Tracking fixed assets manually can be time consuming and error-prone. Fortunately, **Microsoft Dynamics 365 Finance and Operations (D365 F&O)** offers built-in **barcode generation** capabilities for fixed assets, improving accuracy, physical verification, and reporting.

Here's a **step-by-step guide** to help you configure barcode functionality for fixed assets in D365 F&O:

Step 1: Enable Barcode Settings in Fixed Asset Parameters

 **Path:** Fixed Assets > Setup > Fixed asset parameters

- Enable **Auto number fixed assets** – This allows D365 to generate asset numbers automatically.
- Enable **Barcode equals fixed asset number** – This sets the barcode value to match the fixed asset number. (You can still override this if needed.)

The screenshot shows the 'Fixed assets parameters' page in Microsoft Dynamics 365 Finance and Operations. The page is titled 'Fixed assets parameters' and has a 'Standard view' dropdown. The left sidebar shows a navigation menu with 'Fixed assets' selected. The main content area is titled 'Set up fixed asset information' and contains several sections: 'Accounting rules', 'Barcode', and 'Purchase orders'. The 'Barcode' section is highlighted with a red box and contains two toggle switches: 'Autonumber fixed assets' and 'Bar code equals fixed asset num...'. Both toggle switches are currently set to 'Yes'.

Barcode	
Autonumber fixed assets	Bar code equals fixed asset num...
☒ Yes	☒ Yes

✅ Step 2: Configure Fixed Asset Groups

📌 **Path:** Fixed Assets > Setup > Fixed asset groups

In the **General** tab:

- Enable **Auto number barcode**
- Assign a **Barcode number sequence**

Each asset created under this group will now receive a barcode number automatically.

Projects	Projects	

General

Type	Autonumber fixed assets	Autonumber bar codes
Tangible	☒ Yes	☒ Yes
Major type	Number sequence code	Bar code number sequence
	PROJ	PROJ_BAR

✓ Step 3: Configure Barcode Setup via Retail and Commerce Module

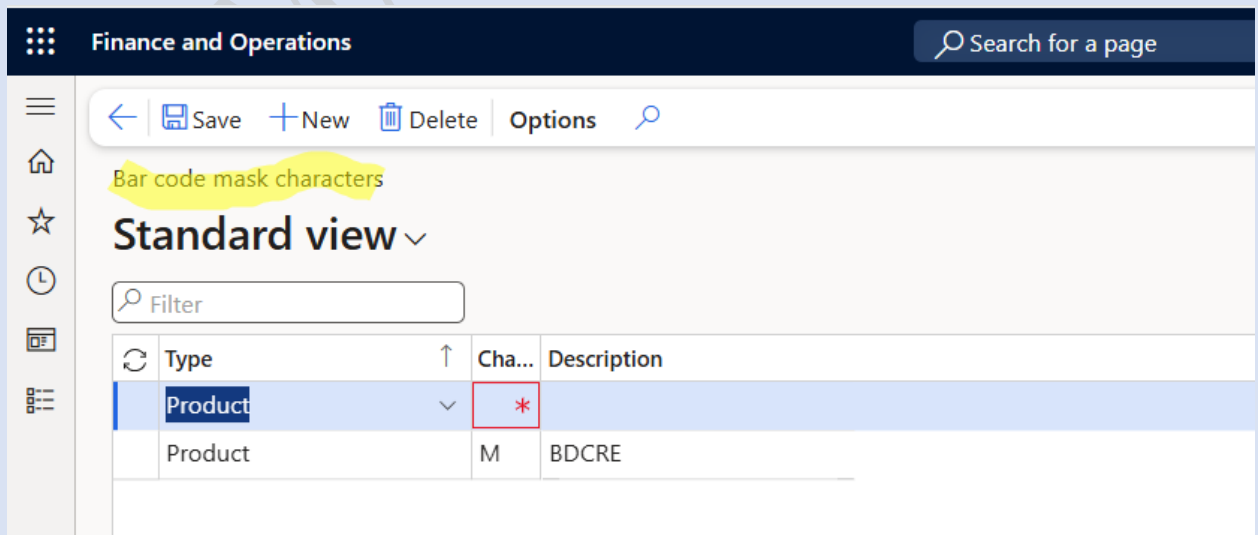

🔧 Step-by-Step Barcode Configuration Process

1. Create Barcode Mask Characters

Before you create a Barcode Mask, you **must first create Barcode Mask Characters**. These characters define the placeholders used in the barcode mask format (e.g., numbers, letters, constants).

📌 **Path:** Retail and Commerce > Inventory management > Barcodes and labels > Barcode mask characters

2. Create Barcode Mask

Once the characters are defined, you can create a **Barcode Mask** using those characters.

Path: Retail and Commerce > Inventory management > Barcodes and labels > Barcode masks

- This defines the structure/format for how barcodes will be generated.

Bar code masks setup

Mask ID	Description	Type
NEW1	NEW MASK	Product

General

Bar code standard	Mask	Prefix	Length
No bar code	NEWMMMMMMMMMM	NEW	12

Bar code mask segment

+ Add - Remove

Segment n...	Type	Length	Character	Decimals
1	Product	9	M	

3. Create and Configure Barcode

Now, create a new barcode using the mask.

Path: Retail and Commerce > Inventory management > Barcodes and labels > Bar codes

- **Select Barcode Type** (Code 39 or Code 128)
- **Font** is auto-filled based on barcode type
- **Assign Barcode Mask ID** (mandatory)
- **Enter Barcode Size and Maximum Length**

Bar code type	Mask ID	Font	Size	Minimum length	Maximum length
Code 39	TST 1	BC C39 3 to 1 HD Wide	52	0	52

✓ Step 4: Automatically Generate Barcodes for New Assets

Once all configurations are complete:

- When a **new fixed asset** is created, a barcode will be **automatically generated** (matching asset number if that option is enabled).
- You can view the barcode number on the **Fixed asset master > Location** fast tab.
- If needed, you can manually assign a different barcode number.

The screenshot shows the 'Fixed asset master' form in Oracle Finance and Operations. The 'Location' tab is selected, and the 'Bar code' field is highlighted with a red box, displaying the value 'PROJ-000001'. Other fields visible include 'Insurance vendor', 'Policy number', 'Insured value', 'Agent', 'Policy expiration date', 'Room number', 'Department', 'Responsible', 'Contact', and 'Lease note'.

✓ Step 5: Assign Barcodes to Existing Fixed Assets

📌 **Path:** Fixed Assets > Periodic tasks > Assign fixed asset number to barcode

The screenshot shows the Oracle Finance and Operations navigation menu. The 'Fixed assets' option is highlighted in the left sidebar. In the 'Periodic tasks' list, the 'Assign fixed asset number to bar code' option is highlighted with a red box.

This function allows you to assign barcode numbers to **pre-existing assets**:

- Assign by **specific assets** or **asset group**
- Useful for onboarding older assets into the barcode system.

OK Cancel

This is useful for companies already maintaining fixed assets without barcodes.

✓ Step 6: View and Print Barcode Reports

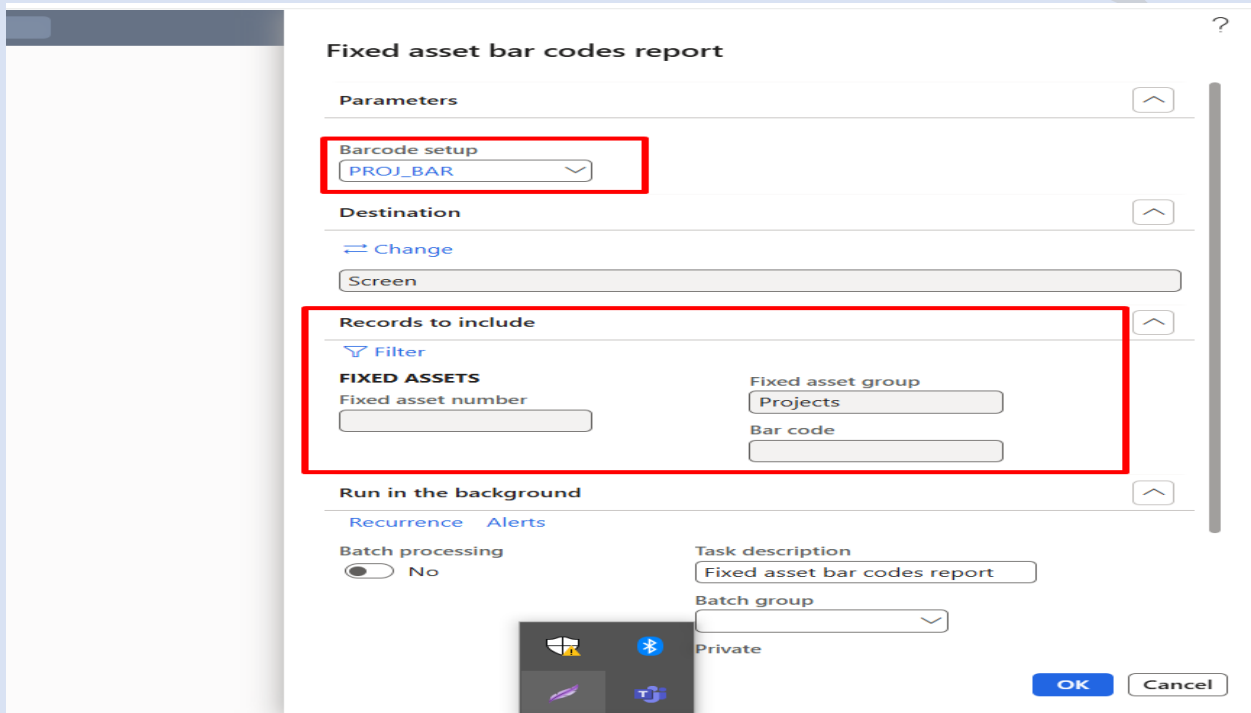

📍 **Path:** Fixed Assets > Periodic tasks > Fixed asset barcode reports

You can generate barcode reports based on:

- Specific Fixed Asset number
- Fixed Asset Group
- Barcode number

 These reports include **scannable barcode images** ready for printing.

The report displays the barcode image, which can be printed and used as a physical label.

Summary of Benefits:

-  Improved physical tracking & audits
-  Barcode support (Code 39, Code 128)
-  Seamless integration with asset lifecycle
-  Automated number generation & reporting
-  Centralized asset management

 **Pro Tip:** Always test your barcode on a scanner before finalizing labels for widespread use.
