

How to create a new product, release product in D365 Finance and Operations I

Introduction to the product

Products in DAX365 can be categorized as *Product Masters* (with variants) or *Released Products* (ready for transactions). Understanding this distinction is crucial for managing inventory, pricing, and configurations.

All products, product master and products forms are same, only filter is applied.

Core Product Concepts:

Product Master: A template for products that have variations (e.g., a T-shirt with different sizes and colors).

Product Variant: A specific version of a product master (e.g., T-shirt, size M, color red).

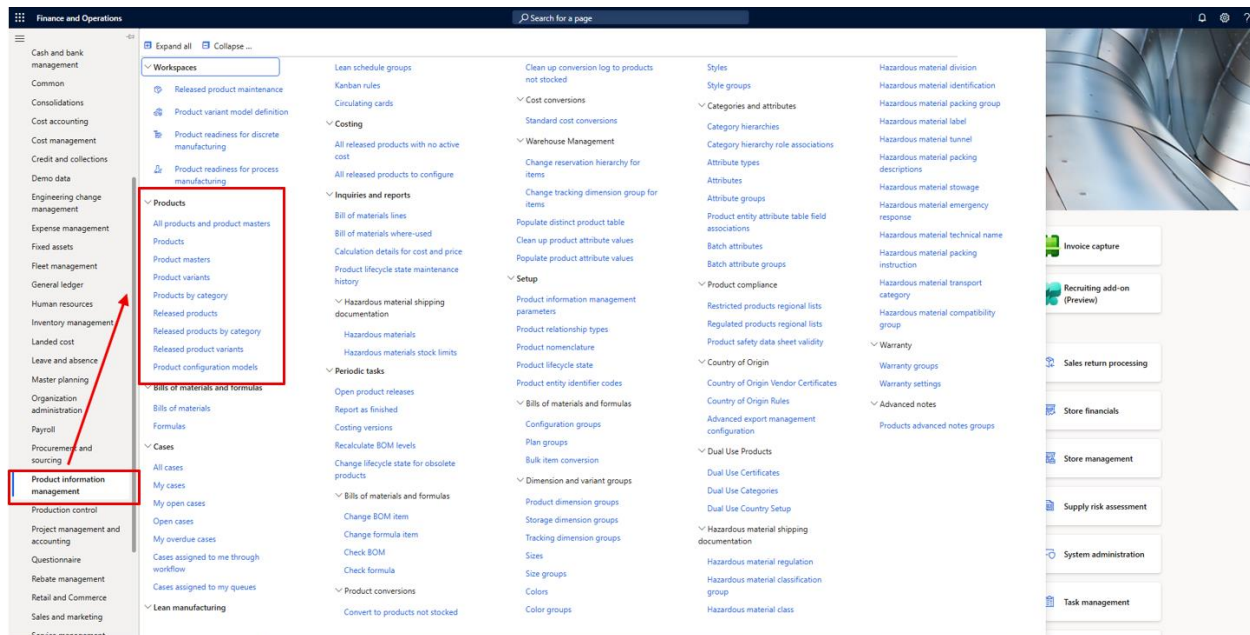

Released Product: A product that's been made available for use in a specific legal entity (company).

Product Dimensions: Attributes like size, color, configuration used to define variants.

Tracking Dimensions: Serial number, batch number used for inventory tracking.

Storage Dimensions: Site, warehouse, location used for logistics and warehousing.

Product Information management > Products

Types of Products

- **Item:** A physical good (laptop, raw material)
- **Service:** A non-tangible offering (installation, consulting)

Product: A standalone item or service

Product Master: A template used to create multiple variants (e.g., T-shirt with different sizes/colors)

Product Variant: A specific combination of dimensions (e.g., Size M, Color Red)

In DAX365 configuring **Product Information Management (PIM) parameters** sets the foundation for how products behave across modules like sales, procurement, and production.

I have already discussed this point of products in my **Exploring Product information management Microsoft D365** topic, which I shared already

Term	Meaning	Example
Product	A general definition of a good or service offered by the company.	"Laptop Model X"
Item	A specific, sellable or stockable version of a product, often with unique identifiers like size, color, or configuration.	"Laptop Model X – Silver, 16GB RAM"
Service	A non-tangible offering	installation, consulting

Creating a new product.

Product information management > Product > All products and product masters

The screenshot shows the SAP PIM 'All products and product masters' page. The left sidebar contains a navigation tree with 'Sales and marketing' highlighted. The main area displays a grid of product-related tasks and settings, including 'Workspaces', 'Costing', 'Inquiries and reports', 'Periodic tasks', 'Cases', 'Bills of materials and formulas', 'Product variants', 'Released products', 'Product configuration models', 'Product lifecycle state maintenance', 'Hazardous material shipping documentation', 'Product entity identifier codes', 'Bills of materials and formulas', 'Dimension and variant groups', 'Product dimension groups', 'Storage dimension groups', 'Tracking dimension groups', 'Sizing', 'Size groups', 'Colors', 'Color groups', 'Hazardous material division', 'Hazardous material identification', 'Hazardous material packing group', 'Hazardous material label', 'Hazardous material tunnel', 'Hazardous material packing descriptions', 'Hazardous material storage', 'Hazardous material emergency response', 'Hazardous material technical name', 'Hazardous material packing instruction', 'Hazardous material transport category', 'Hazardous material compatibility group', 'Warranty', 'Warranty groups', 'Warranty settings', 'Advanced notes', 'Products advanced notes groups', 'Country of Origin', 'Country of Origin Vendor Certificates', 'Country of Origin Rules', 'Advanced export management configuration', 'Dual Use Products', 'Dual Use Certificates', 'Dual Use Categories', 'Dual Use Country Setup', 'Hazardous material shipping documentation', 'Hazardous material regulation', 'Hazardous material classification group', and 'Hazardous material class'.

OK Cancel

Product Dimension Group:

In Dynamics 365 Finance and Operations (DAX365), a **Product Dimension Group** defines which product dimensions like **color**, **size**, **style** and **configuration** are applicable to a **Product Master**. These dimensions help distinguish product variants from one another. First option is greyed because I am creating product not product master.

NATIONAL MOTOR FREIGHT CLASSIFICATION

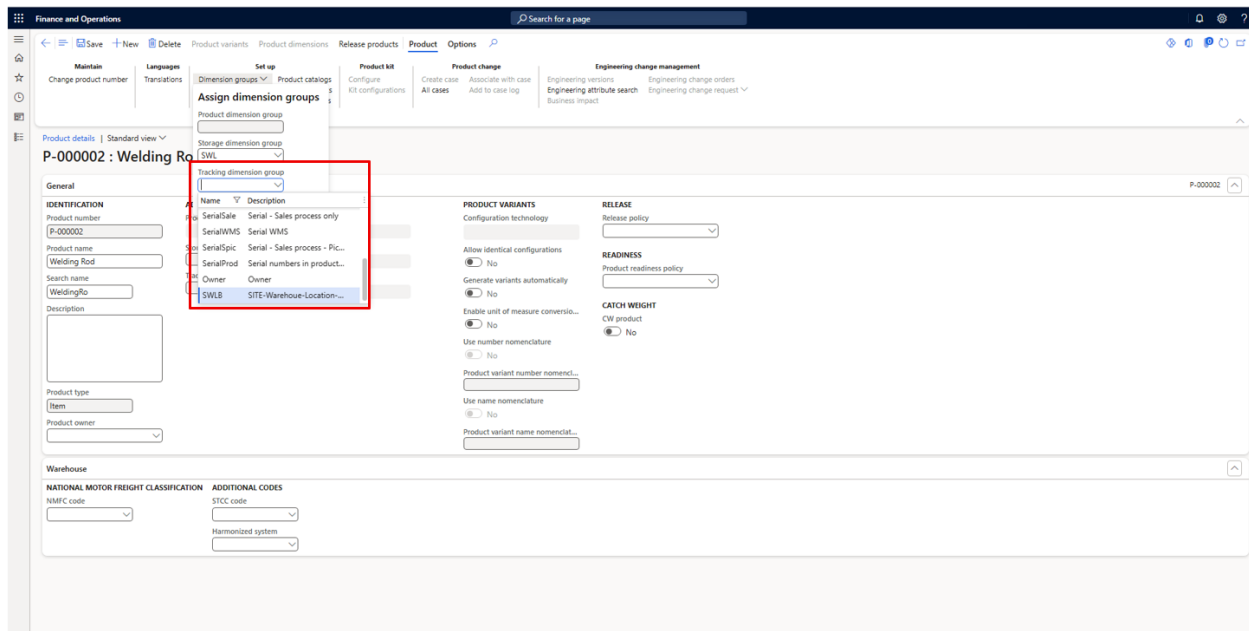

NMFC code: STCC code: Harmonized system:

A **Storage Dimension Group** determines which physical storage attributes are used to manage inventory transactions. (Site, WH, Location, Inventory Status or etc)
Let's attach the SWL dimension.

The screenshot shows the SAP Finance and Operations interface. The 'Assign dimension groups' dialog box is open, and the 'Storage dimension group' is being assigned. The 'Storage dimension group' dropdown is highlighted, and the 'SWL' option is selected. The 'SWL' option is described as 'Site-Warehouse-Location'.

A **Tracking Dimension Group** defines how inventory items are tracked at a granular level especially for traceability, compliance, and quality control. (Batch #, Serial #, ownership)
Attach SWLB tracking dimension and press OK button

The screenshot shows the SAP Finance and Operations interface. The 'Assign dimension groups' dialog box is open, and the 'Tracking dimension group' is being assigned. The 'Tracking dimension group' dropdown is highlighted, and the 'SWLB' option is selected. The 'SWLB' option is described as 'SITE-Warehouse-Location'.

Here you can see the dimensions group.

The screenshot shows the SAP Product Details form for 'P-000002 : Welding Rod'. The 'ADMINISTRATION' tab is highlighted with a red box, showing fields for 'Product dimension group' (SWL), 'Storage dimension group' (SWL), and 'Tracking dimension group' (SWLB). Other tabs include IDENTIFICATION, VARIANTS, PRODUCT VARIANTS, RELEASE, and CATCH WEIGHT.

Creating a product is very easy and has few steps to complete but on the other hand creating a release product is more complex, but it has more fields. In this manual we are just creating a Product that's why we are not going to select other fields like color group, size group and style group. These fields are for the product master not for the product. Currently no Product attributes linked with product.

The screenshot shows the SAP Product Details form for 'P-000002 : Welding Rod'. The 'VARIANTS' and 'PRODUCT VARIANTS' tabs are highlighted with red boxes. The 'VARIANTS' tab shows fields for 'Color group', 'Style group', and 'Size group'. The 'PRODUCT VARIANTS' tab shows fields for 'Configuration technology', 'Allow identical configurations', 'Generate variants automatically', 'Enable unit of measure conversion', 'Use number nomenclature', 'Product variant number nomenclature', 'Use name nomenclature', and 'Product variant name nomenclature'.

A **related product** is any item that has a defined relationship to another product. This could be:

- **Accessories** (e.g., a charger for a mobile phone)
- **Spare parts** (e.g., a replacement blade for a trimmer)
- **Similar alternatives** (e.g., different brands of the same type of item)
- **Upsell options** (e.g., a premium version of the same product)

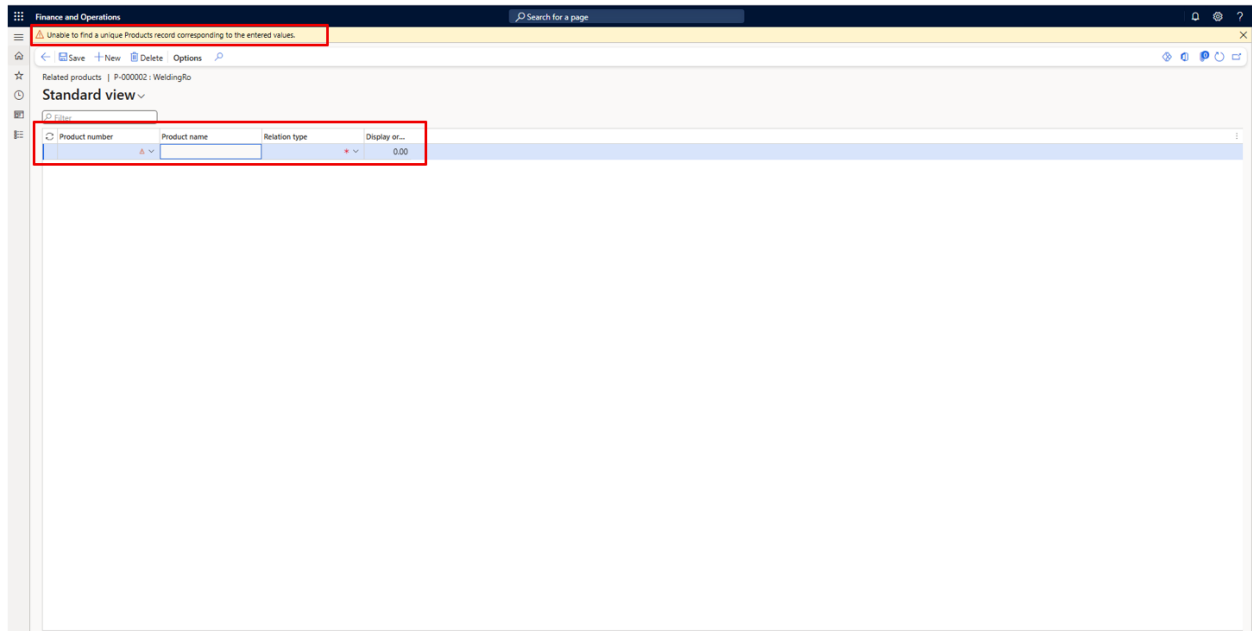

These relationships are configured in the **Product Information Management** module and are visible in webshops or sales interfaces to guide users toward complementary or alternative items

You can assign related products to both, but with **product masters**, you may want to relate at the **variant level** if needed, especially for retail or B2C scenarios.

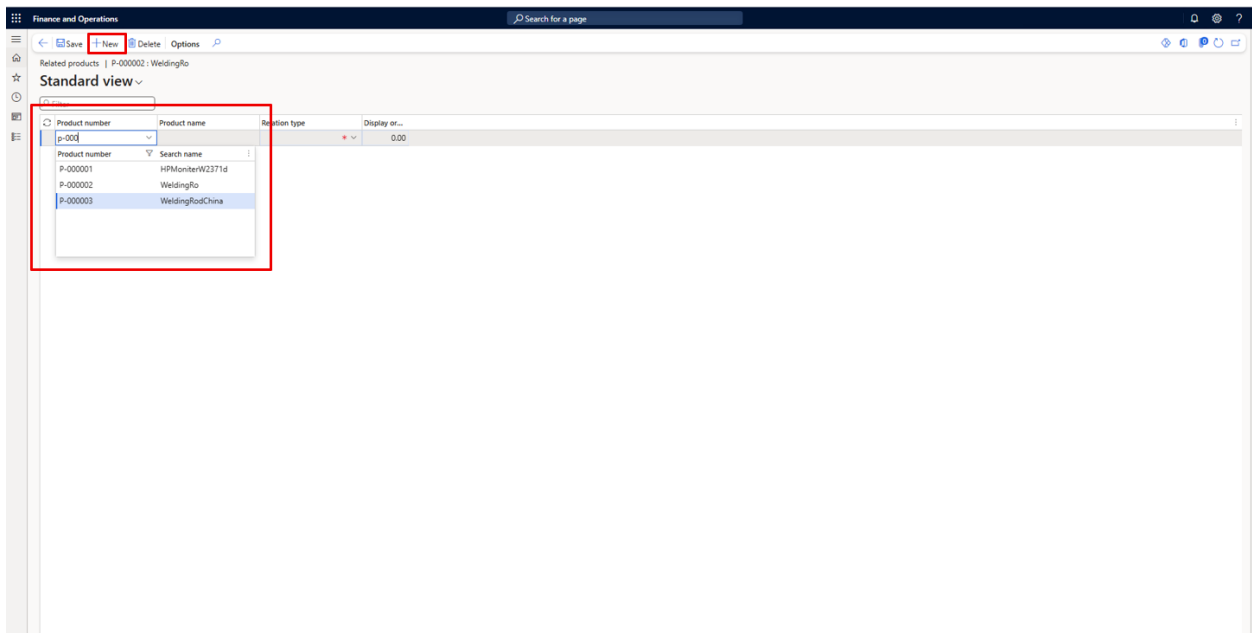

The screenshot displays the SAP Product Information Management (PIM) interface for product P-000002: Welding Rod. The interface is organized into several tabs and sections:

- Navigation Bar:** Includes icons for navigation and a search bar.
- Product Details:** Shows the product name "P-000002 : Welding Rod" and a "Standard view" dropdown.
- Configuration Tabs:** Includes "Maintain", "Languages", "Set up", "Product kit", "Product change", and "Engineering change management". The "Set up" tab is active, showing sub-tabs for "Dimension groups", "Product attributes", "Product categories", "Product kit", "Product change", and "Engineering change management".
- General Section:** Contains fields for "Product number" (P-000002), "Product name" (Welding Rod), "Search name" (WeldingRo), and "Description".
- ADMINISTRATION Section:** Includes fields for "Product dimension group", "Storage dimension group" (SWL), and "Tracking dimension group" (SWLB).
- VARIANTS Section:** Includes fields for "Color group", "Style group", and "Size group".
- PRODUCT VARIANTS Section:** Includes fields for "Configuration technology", "Allow identical configurations" (No), "Generate variants automatically" (No), "Enable unit of measure conversio..." (No), "Use number nomenclature" (No), "Product variant number nomenclat..." (No), "Use name nomenclature" (No), and "Product variant name nomenclat..." (No).
- RELEASE Section:** Includes fields for "Release policy" and "Product readiness policy".
- READINESS Section:** Includes fields for "Product readiness policy" and "CATCH WEIGHT" (CW product, No).
- Warehouse Section:** Includes fields for "NATIONAL MOTOR FREIGHT CLASSIFICATION" (NMFC code) and "ADDITIONAL CODES" (STCC code, Harmonized system).

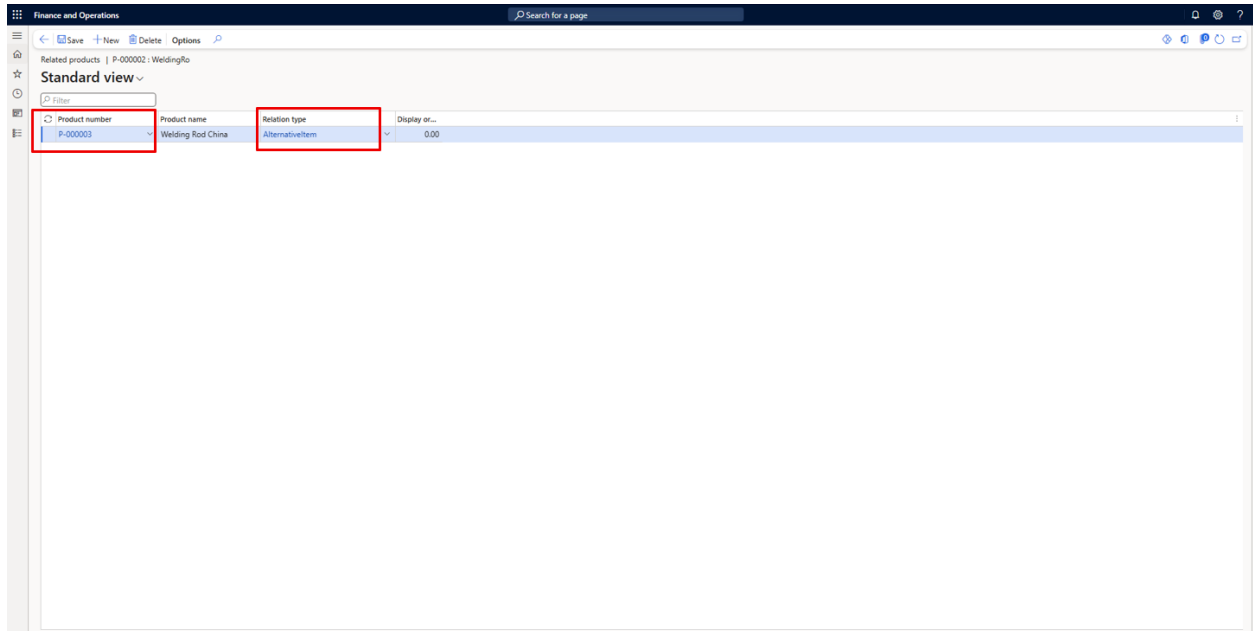

Currently there is no related product that's why system is showing error when I click on the new button on related product form.

Now we created a new item same as welding rod but this product is China product

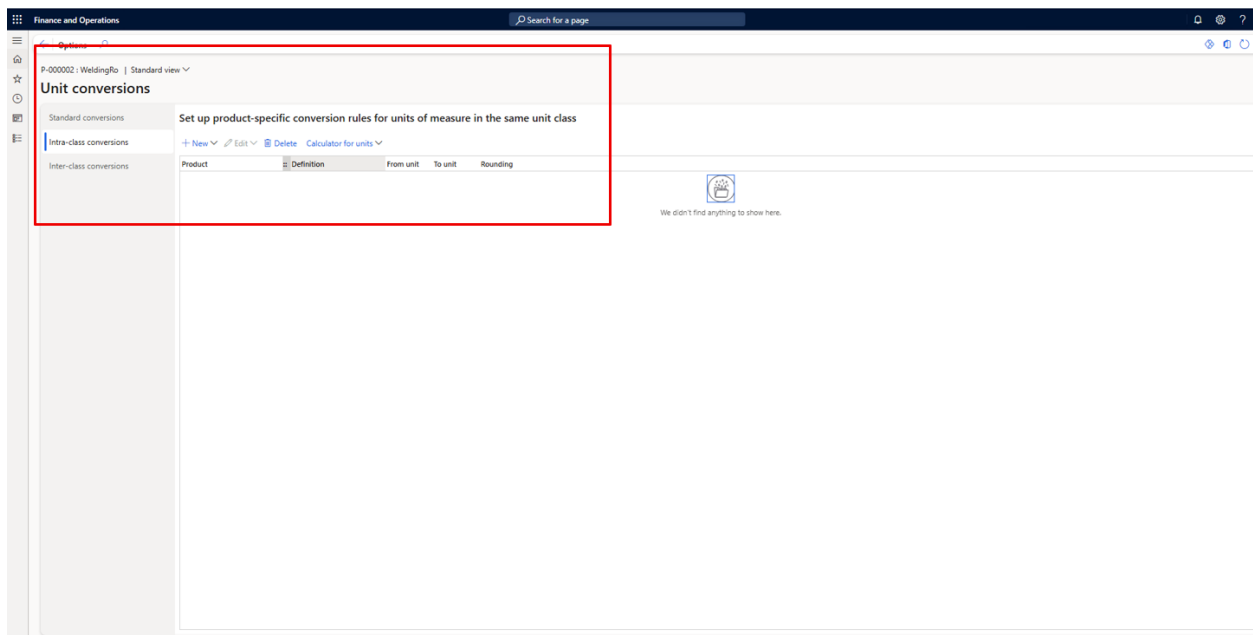

We will attach this product P-000003 to P-000002 product and relation type must enter (Alternative Item)

Product Unit Conversions

In **Dynamics 365 Finance & Operations**, unit conversion allows you to manage products across different **units of measure (UOM)** for example, buying in boxes, storing in pieces, and selling in kilograms. This is especially useful when working with **product masters and variants**, where packaging or sizing may vary.

If we click on the **standard conversions**, then the system will show the all unit conversions of shared created by Microsoft.

Intra-class units (e.g., pieces to dozens)

Inter-class units (e.g., liters to kilograms)

These conversions ensure consistency across purchasing, inventory, and sales processes

Unit conversions

NATIONAL MOTOR FREIGHT CLASSIFICATION

NMFC code:

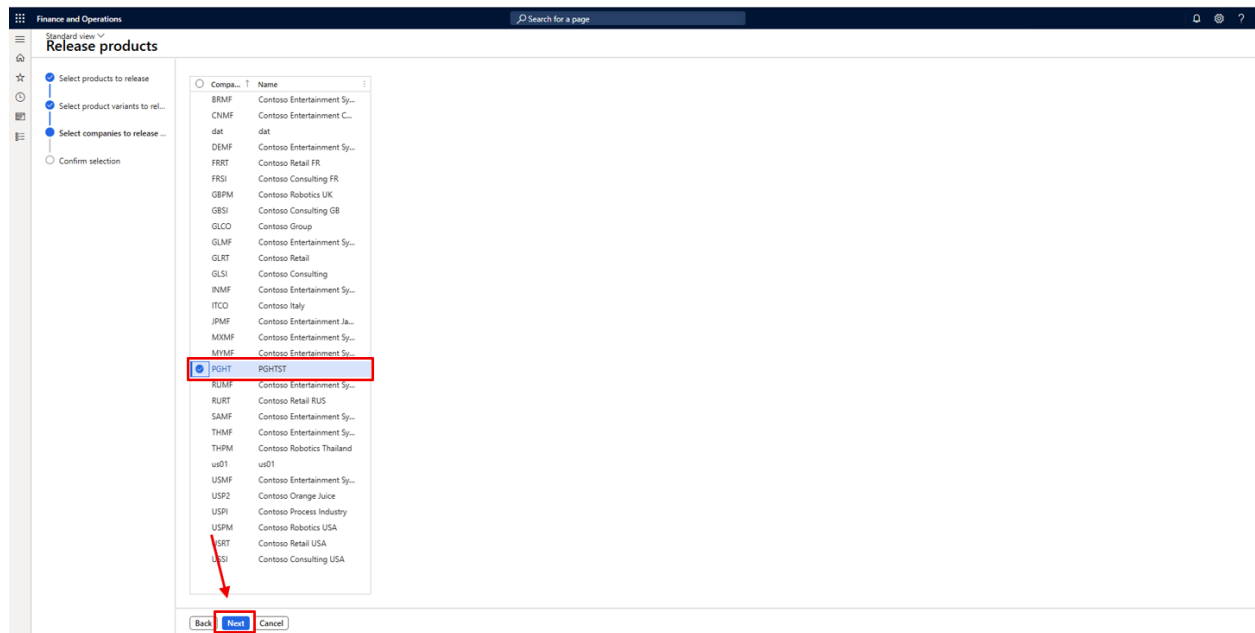

ADDITIONAL CODES

STCC code:

Harmonized system:

Click on the **next** button and choose the company. You can choose multiple companies.

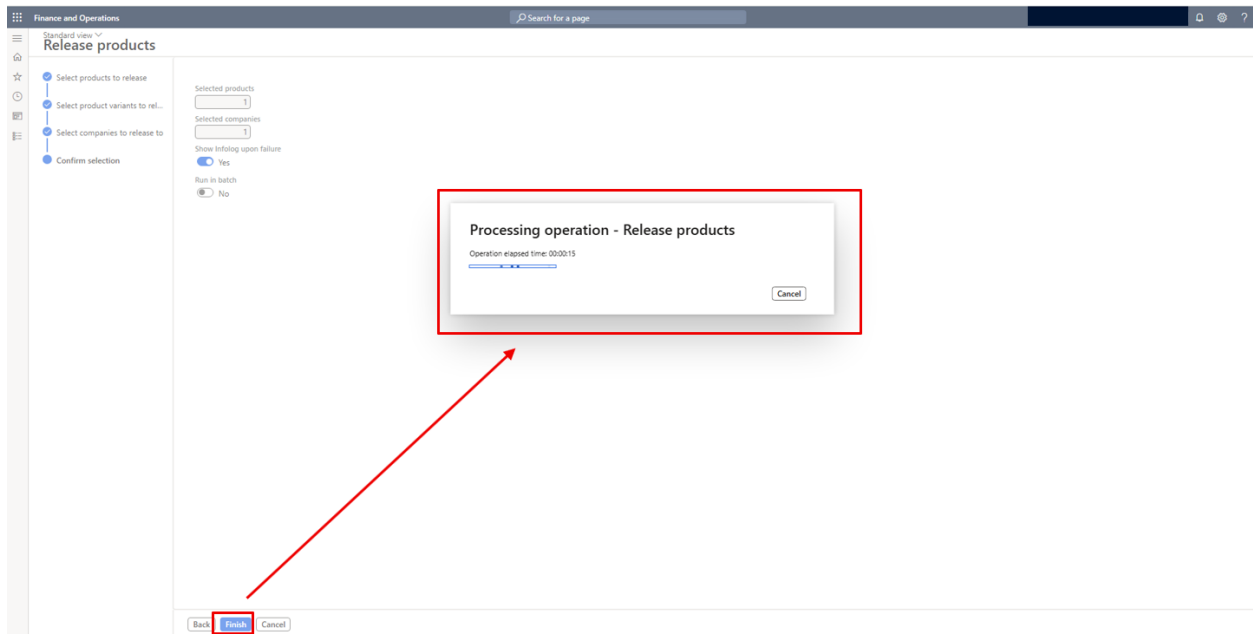

After that you can finish this task.

The screenshot shows the 'Release products' form in the SAP S/4HANA 'Finance and Operations' module. The left sidebar contains a navigation menu with the following steps: 'Select products to release', 'Select product variants to rel...', 'Select companies to release to', and 'Confirm selection'. The main area displays the following fields: 'Selected products' (value: 1), 'Selected companies' (value: 1), 'Show InfoLog upon failure' (radio button selected for 'Yes'), and 'Run in batch' (radio button selected for 'No'). A red box highlights the 'Run in batch' section. At the bottom, there are three buttons: 'Back', 'Finish', and 'Cancel'. A red arrow points to the 'Finish' button.

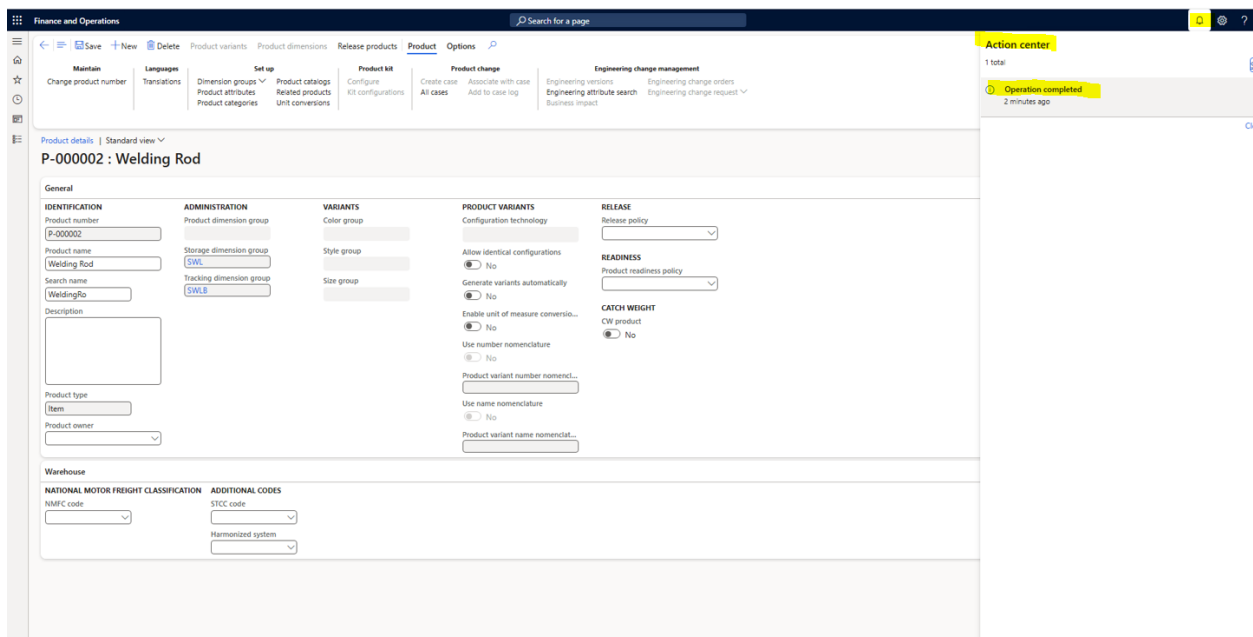

If you have lot of items and you want to release this then use ***Run in batch*** option. Otherwise, the system will be stuck in the releasing process.

The screenshot shows the 'Release products' form in the SAP S/4HANA 'Finance and Operations' module. The left sidebar contains the same navigation menu as the previous screenshot. The main area displays the following fields: 'Selected products' (value: 1), 'Selected companies' (value: 1), 'Show InfoLog upon failure' (radio button selected for 'Yes'), and 'Run in batch' (radio button selected for 'Yes'). A red box highlights the 'Run in batch' section. At the bottom, there are three buttons: 'Back', 'Finish', and 'Cancel'. A red arrow points to the 'Finish' button.

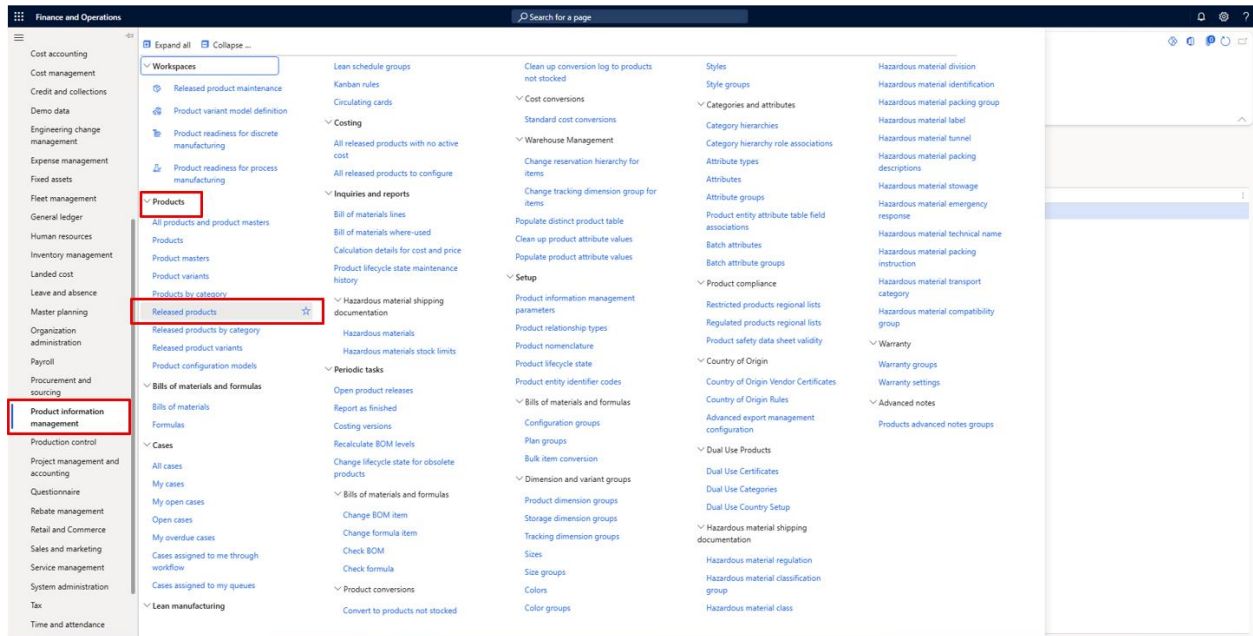

When you click on the **Finish** button then system take some time to release this product.

Once the process is completed then you will receive a notification. Now the product is released.

Go to Product information management > Products > Released products

Still some fields of this product is missing, like purchase, sale and inventory units taxes and item model group. Now we need to do this. You can enter during the creation of the product, or you can do it after releasing the product.
