

Delivery Schedule Process

Microsoft Dynamics 365 F&O

Prepared By
Santosh Bejjarapu

What is Delivery Schedule?

It is a structured process designed to manage the timing and method of delivering products to customers or warehouses. The process begins by evaluating inventory levels and analysing customer demand to identify the best delivery schedules. Many businesses enhance logistics planning by offering customers the option to choose their preferred delivery windows during checkout, ensuring greater efficiency and customer satisfaction.

How Delivery Schedules works?

Create delivery schedules - Creating a delivery schedule involves splitting the total quantity of an order line into multiple delivery lines. These lines are determined by factors such as the delivery schedule, quantity, delivery method, and storage dimensions (e.g., site and warehouse). Each delivery line corresponds to an individual shipment.

Manage delivery lines - Delivery lines can have different delivery dates, quantities, modes of delivery, and storage dimensions. If the delivery lines updated/changed, the original delivery line will be automatically updated.

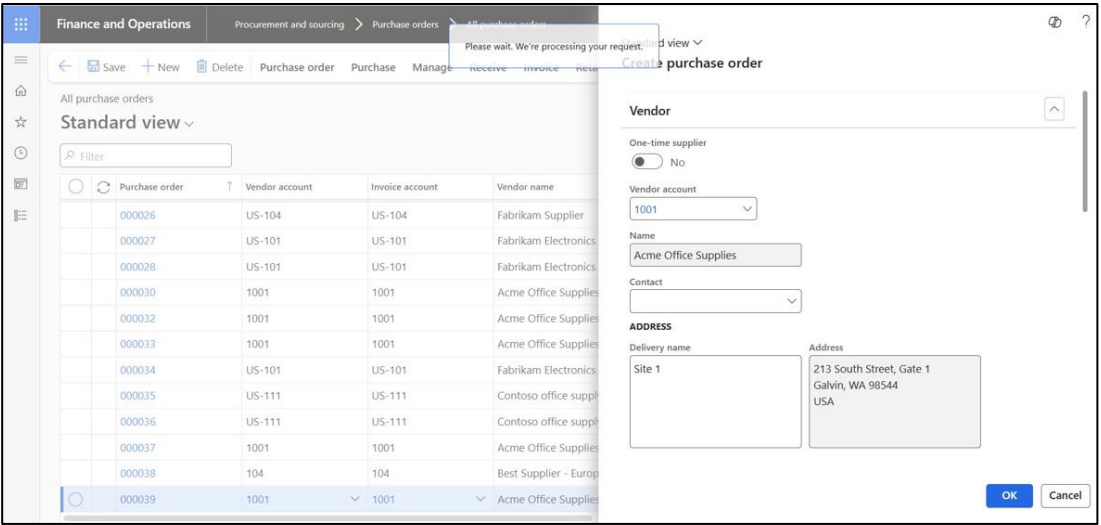

Process orders - Orders that have a delivery schedule are processed against the delivery lines. This processing includes the posting of packing slips, product receipts, and invoicing.

Delivery Schedule details

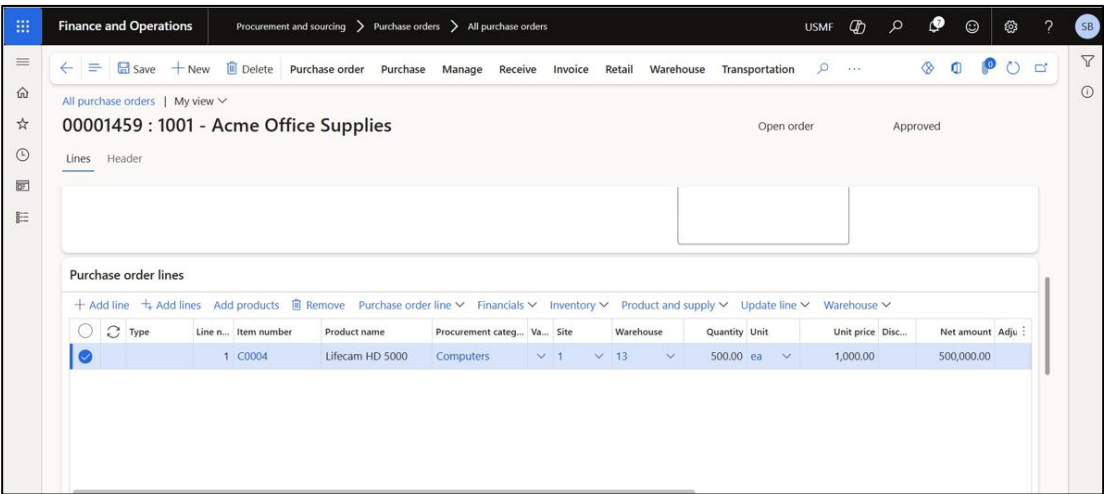

Item	Shipment details
Total order Qty	500 Life Camera
Requested delivery schedule	3 months
Requested Qty for each delivery	200 Qty, 200 Qty & 100 Qty

Delivery Schedule process in Microsoft Dynamics F&O

- Go to Procurement and sourcing > Purchase orders > All purchase orders.
- Create new purchase order.

- Add the line details
 - Item number
 - Quantity
 - Unit
 - Warehouse

- In the line details, click on Purchase order line and select Delivery schedule.

The screenshot shows the SAP Finance and Operations interface. The 'Purchase order line' dropdown menu is open, displaying options such as 'NEW', 'Delivery schedule', 'Credit note', 'COPY', 'From all', 'From journal', 'From line', 'EXPLODE', 'BOM lines', 'CALCULATE', 'Supplementary items', 'ATTACHMENTS', 'Attachments', 'VIEW', 'DISPLAY', and 'Dimensions'. The 'Delivery schedule' option is highlighted. The background shows the 'Purchase order line' details for '00001459 : 1001 - Acme Office Supplies'.

- Update the Qty and Requested receipt date based on the delivery requirement.

Note: the line number appears 2 since on the PO the line already available.

The screenshot shows the SAP Finance and Operations interface with the 'Delivery schedule' dialog box open. The dialog box displays the 'Delivery for the purchase line' table, which includes columns for 'Line number', 'Quantity', 'CW quantity', 'Requested receipt date', and 'Confirmed receipt date'. The 'Requested receipt date' is set to '1/24/2025'. The 'Charges conversion' section is also visible, with the 'Allocate to delivery lines' option selected. The background shows the 'Purchase order line' details for '00001459 : 1001 - Acme Office Supplies'.

- Update the remaining Qty & Requested receipt date by adding new line.
- If any charges applicable on the PO, select **“Allocate to delivery lines”** and click ok.

Note: If required, we can change the different Warehouse details, Mode of delivery for each line.

- Each line will be considered as different shipment.
- Confirm the PO and print the confirmation report. The print report will show only delivery lines and not the original line.
