Sale Return Process

A paper manufacturing company, **Evergreen Paper Mills**, uses D365 Finance and Operations. Evergreen Paper Mills produces paper reels and sells them to various customers through the sales process. However, sometimes reels are returned by customers, or they get damaged during transit. In addition, while creating sales orders, the sales department staff occasionally make mistakes, which leads to the creation of sales returns for document correction purposes.

In the sale return, There are two scenarios such as

1. Quality department to be involved in Sale Return Process.
2. Quality department to be not involved in Sale Return Process

In this blog, we will see how the system handles such situations out of the box.

1. Quality Department To Be Involved in Sale Return Process

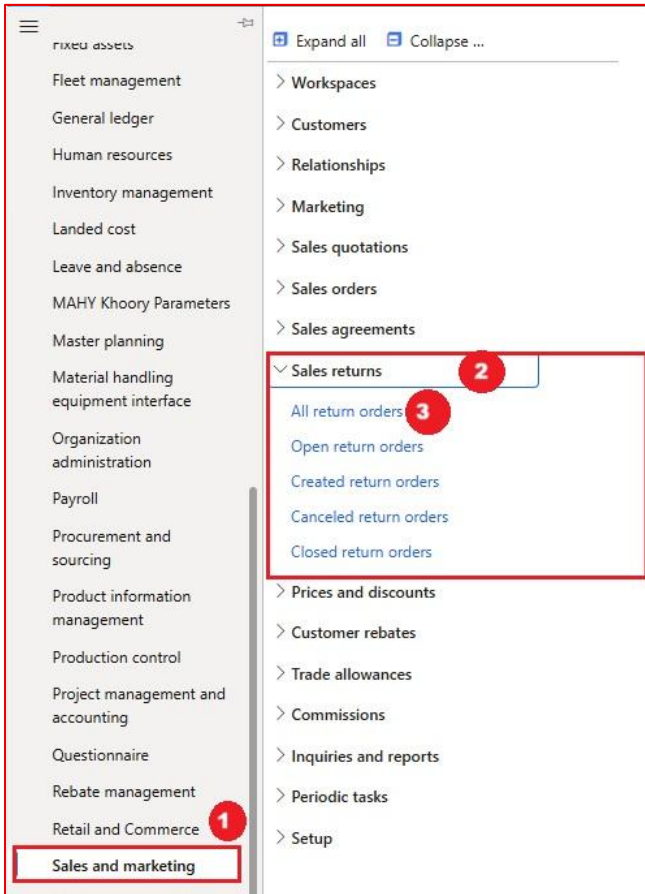

In below scenarios System should always create quality order before post packing slip

There are multiple Scenario's such as

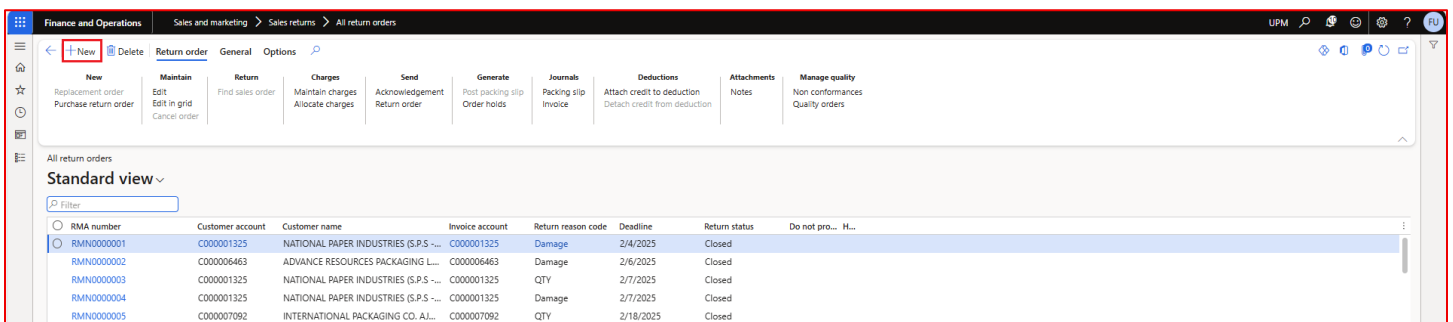

1. The Customer returns the reel that is damaged during transportation and was originally sent by the dispatch team in the same condition or has other quality issues.
2. In case where a transport vehicle carrying materials is involved in an accident during transit, the damaged materials are returned to the mill, depending on the accident's location.
3. Any time during transit for any reason, damaged material returns to the mill, QA department will check the quality after getting a request from sales / Finishing house, a report will be submitted to the concerned sales / finishing house for acting, like any insurance claim, etc.
4. During transportation returned reel damage issues- Divert to Pending / Repulp/ Diversion option.

Step No 1: Create Sale Return

Path: Sale and Marketing → Sale Returns → All Return Orders

1. On Action Pane, Click → New

2. Select, Customer Account
3. Select, Site and Dimensions
4. Select, Return Code Reason

?

Assign disposition code.

Parameters

^

Select the disposition code to assign to the return line.
You can change quantity and specify storage and tracking dimensions later.

Disposition code

Disposi...	Action	Description
Credit	Credit	Put Item Back Into Invent...
Document	Credit	Document Correction
Rep_Credit	Replace and credit	Replace Item, Credit Cust...
Ret_Cust	Return to customer	Reject Returned Item, ret...

OK

Cancel

***Important NOTE:**

The disposition code is very important, and the user must select it carefully because this step will determine whether your Quality Order will be created automatically or not, especially if credit has been taken. Since the customer is returning the item to the factory due to a quality issue or damage, a quality order will be created for it

4. Click → Add Registration

2. Quality Department To Be Not Involved in Sale Return Process

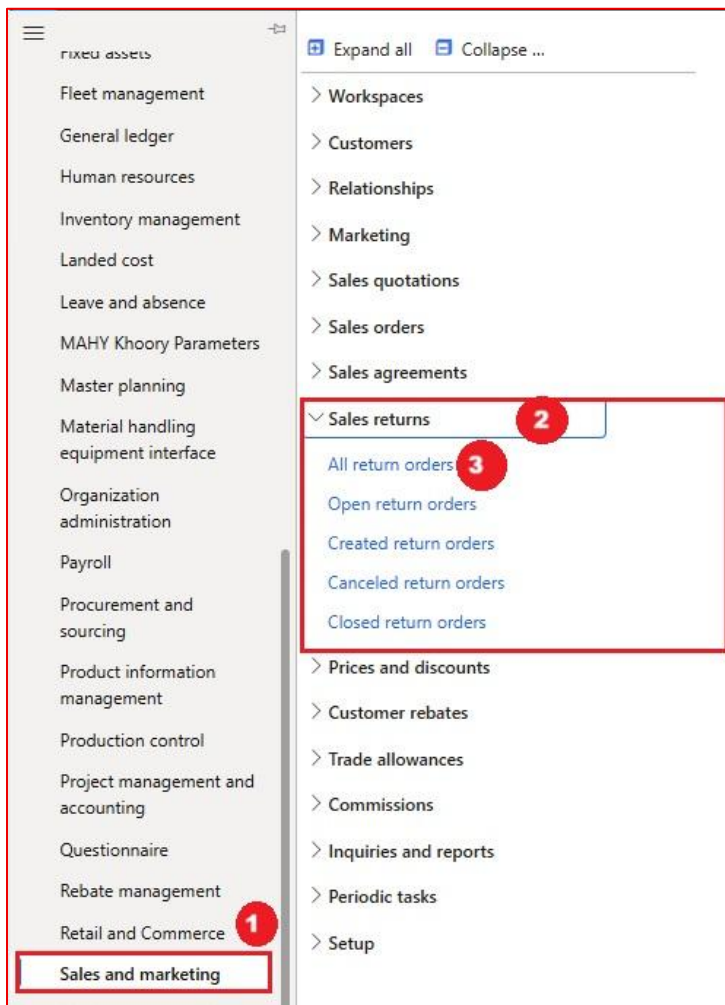

In below scenarios System should not create quality order before post packing slip

There are multiple Scenario's related to Documentation Correction such as

1. Wrong dispatch: - In this case by mistakenly sending the wrong reel to customer by dispatch team or given the clearance by the sales team- Return Material may need QC to check for any damage etc.
2. Sales order creation issue: - In this case, an incorrect unit price entered at the time of sales order creation and by default, exports are generally zero-rated or exempt from VAT in most tax jurisdictions if VAT was applied by mistake.
3. Customer order adjustment: - Customer has already received the material, they can request the sales team to adjust the quantity in their other pending purchase orders (POs).
