Quality Order Process- Sale Return

Fahad Ullah

SCM & MFG FUNCTIONAL CONSULTANT

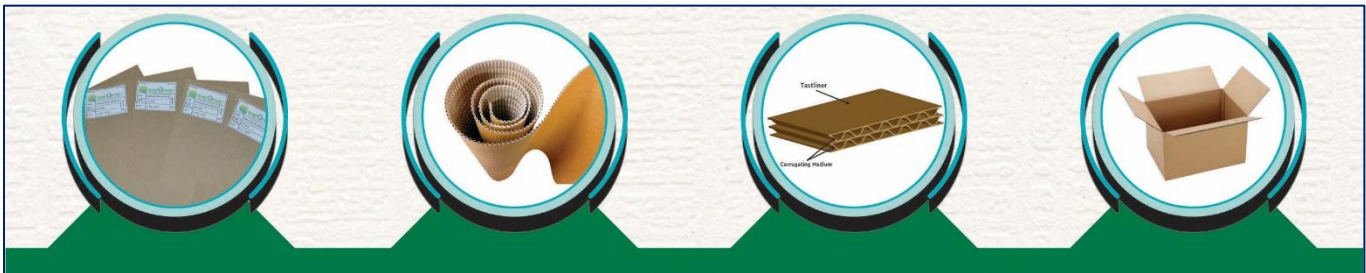

Quality Order Process- Sales Return

The Quality Order process for sales returns D365 Finance and Operations. This process ensures that returned goods are properly inspected and their quality is assessed before being restocked or processed further.

Business Case

A paper manufacturing company, **"Evergreen Paper Mills,"** uses D365 Finance and Operations "Evergreen Paper Mills" has sold a large Paper Reels to a printing company. The customer reports that a portion of the delivery has issues with damage and Creasing. Evergreen Paper Mills initiates a sales return process with quality inspection.

Product Line of Evergreen Paper Mill

Considering the requirements of Evergreen Paper Mills, Microsoft has introduced an Advanced Quality Management feature in version 10.0.44, which includes a new option for Sales Return at the Quality Associate level. This new option will fully meet the requirements of Evergreen Paper Mills.

Requirements of Evergreen Paper User

Further we will require physical inspection with remarks and a final decision column in the report.

Here sometimes material returns (Paper Reel) from the customer and sometimes due to transit damage etc the material returns to the mill – we need to give our comments on these returns that come back to the mill

Pre-Requisite

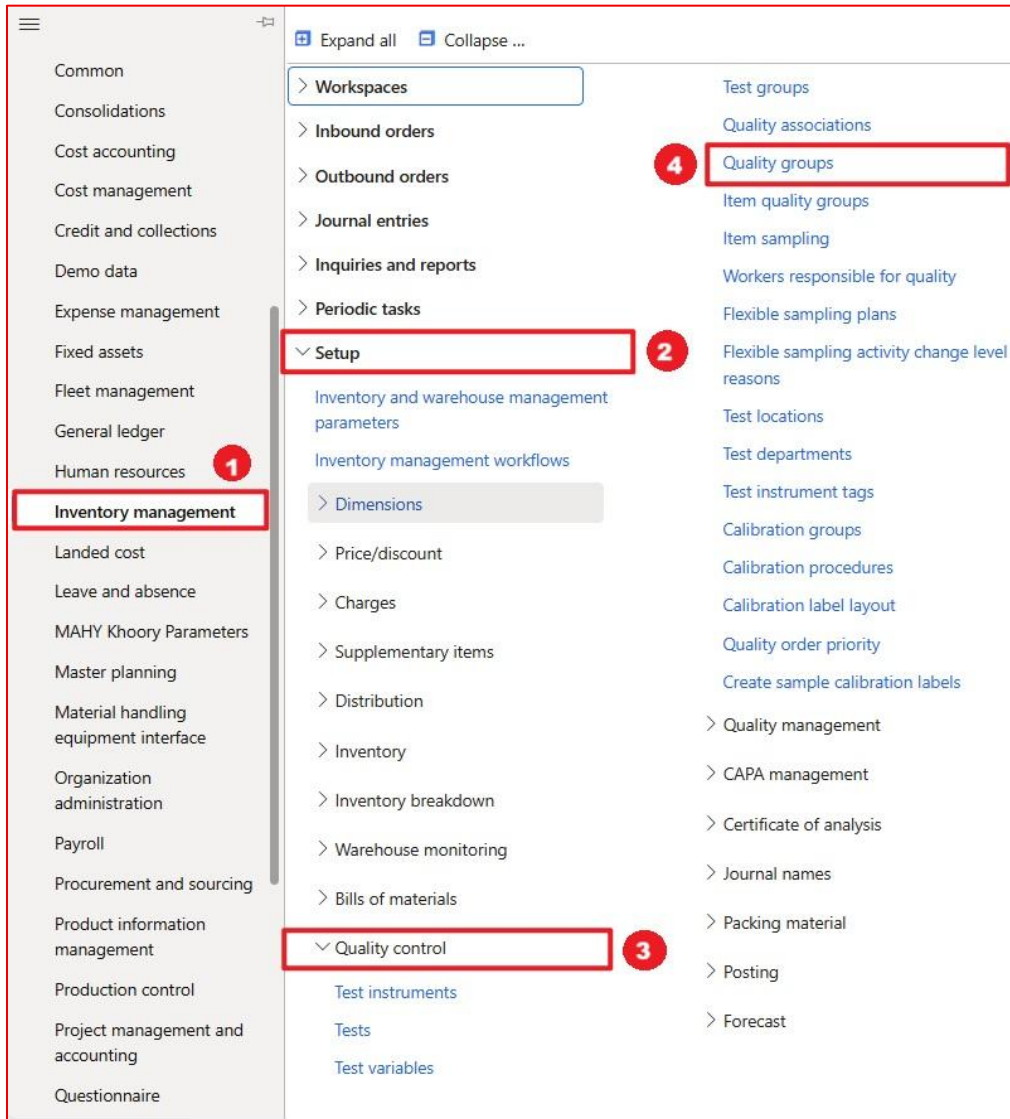

There the following pre-requisite setup step before going to process execution

1. Create Quality Group
2. Create Item Quality Groups
3. Create Item Sampling
4. Create Test Groups
5. Create Test
6. Create Test Instrument
7. Create Quality Associate

1. Create Quality Group

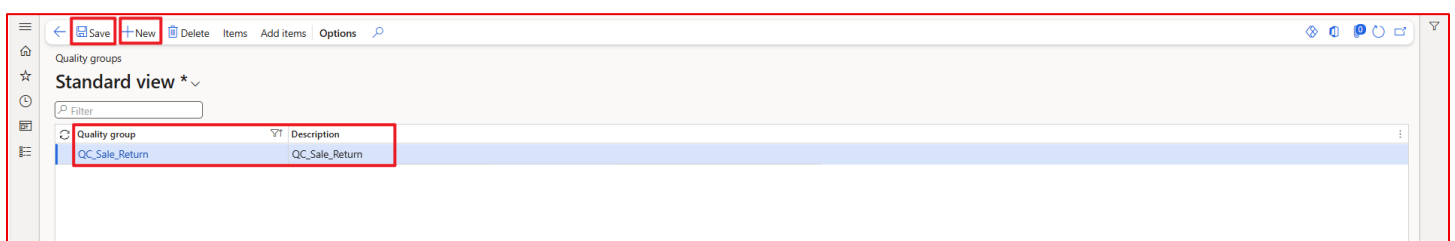

In **Dynamics 365 Supply Chain Management**, **Quality Group** represents a set of items that require the same quality checks. Instead of defining quality rules for each item individually, you can define them once for the group and apply them to all items within it.

Go Path: Inventory Management → Setup → Quality Control → Quality Group

Enter or select following fields

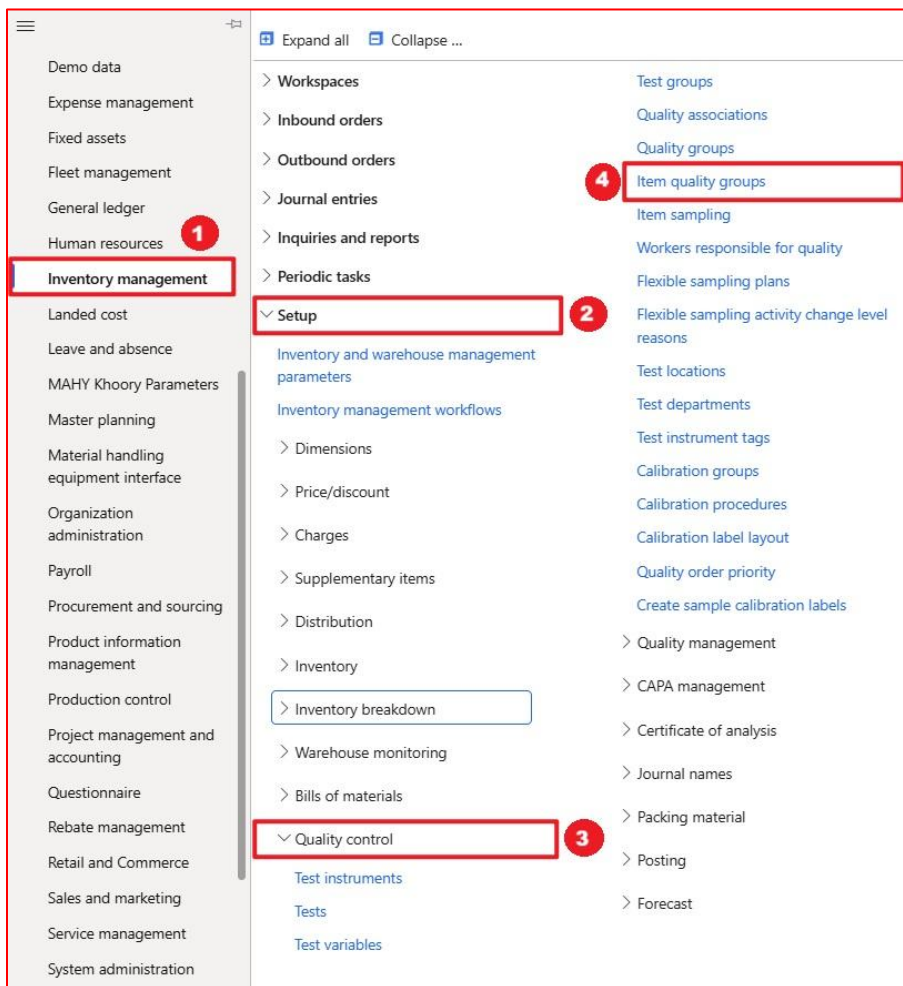

1. On Action Pane, Click a New Button
2. Enter, Quality Group
3. Enter, Description
4. On Action Pane, Click a Save Button

2. Create Item Quality Group

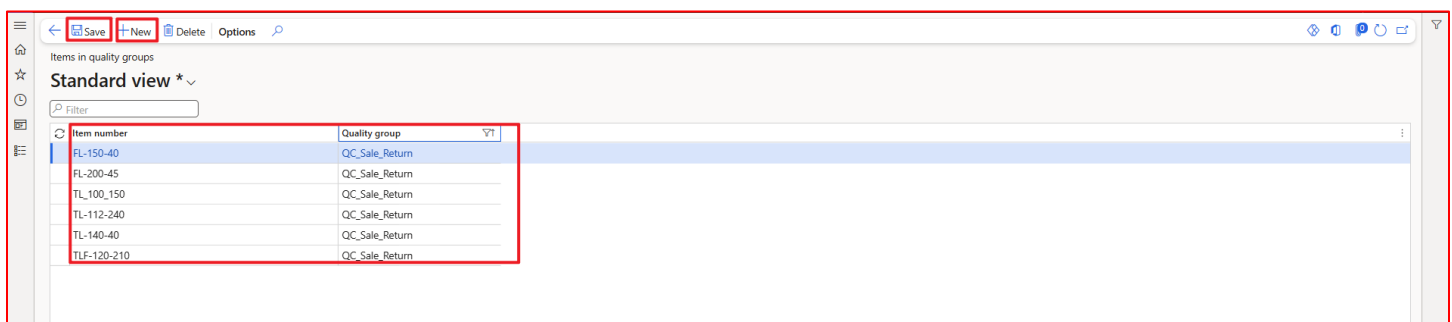

In **Dynamics 365 Supply Chain Management**, an **Item Quality Group** is a way to logically group products that share the same testing requirements. This simplifies the setup and management of **quality associations** and **quality orders**.

Go Path: Inventory Management → Setup → Quality Control → Item Quality Group

Enter or select following fields

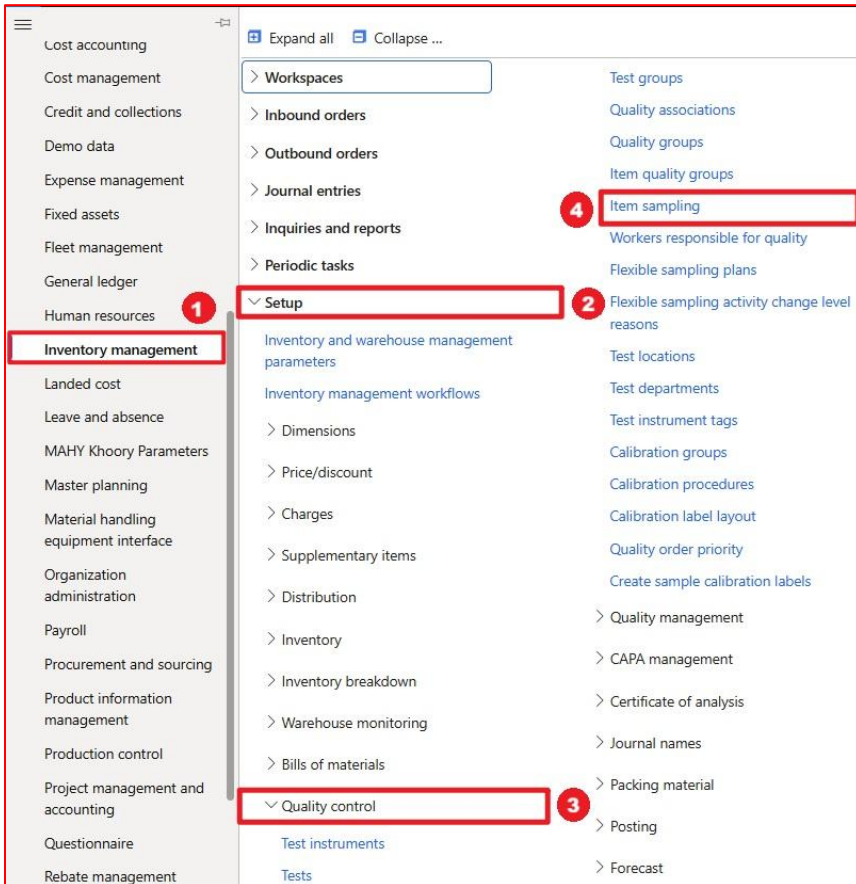

1. On Action Pane, Click a New Button
2. Enter, Item Numbers
3. Enter, Quality Group
4. On Action Pane, Click a Save Button

3. Create Item Sampling

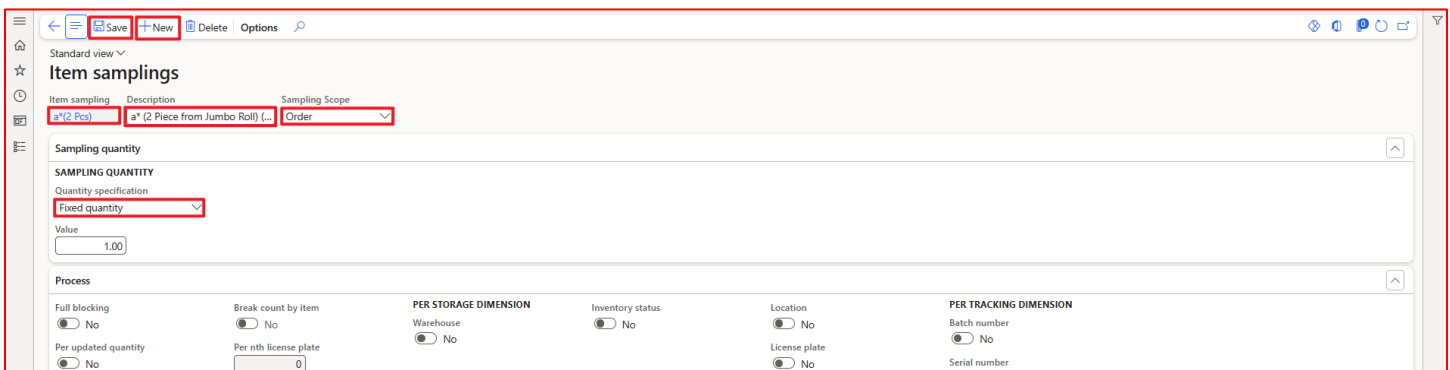

In **Dynamics 365 Supply Chain Management**, **Item Sampling** is a key part of the **Quality Management** module. It defines how much of a product's inventory should be tested during quality control processes. Item sampling determines the **quantity of items** to be inspected from a batch or lot. It is used in **quality associations** to automatically generate **quality orders** based on predefined rules.

Go Path: Inventory Management → Setup → Quality Control → Item Sampling

Enter or select following fields

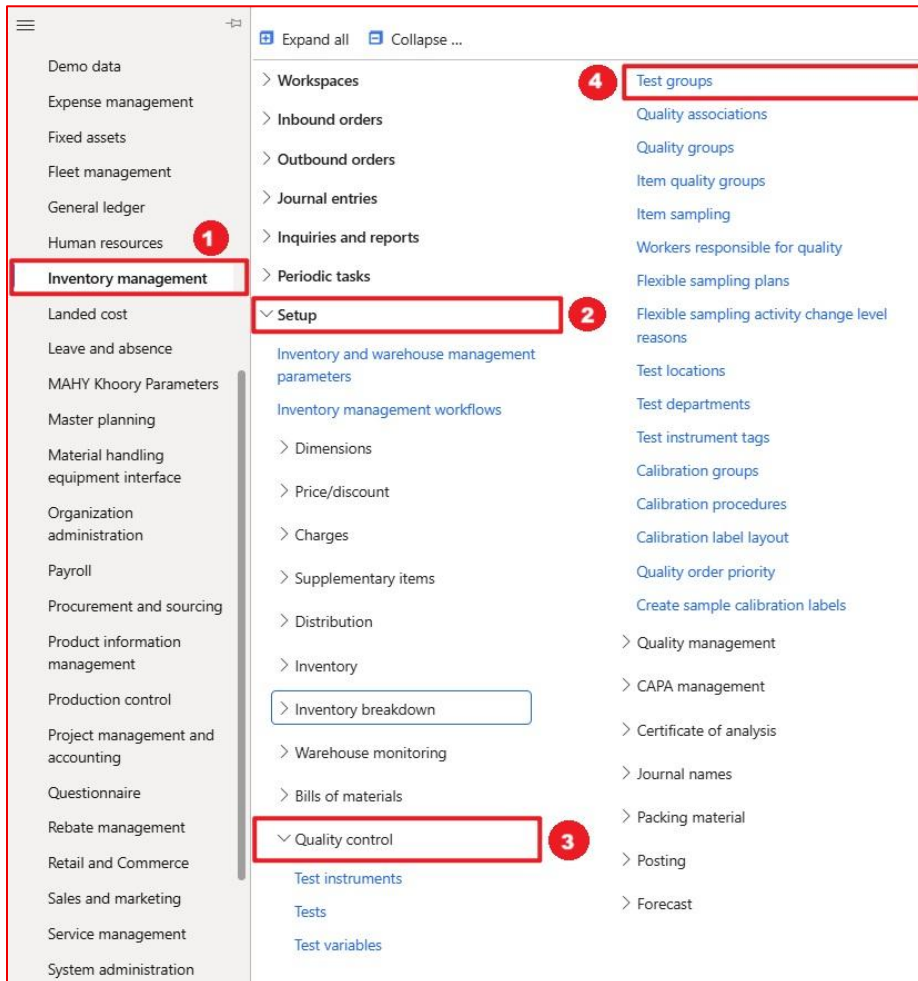

1. On Action Pane, Click a New Button
2. Enter, Item Sampling
3. Enter, Description
4. Select, Sampling Group
5. Select, Quantity Specification
6. On Action Pane, Click a Save Button

4. Create Test Group

In **Microsoft Dynamics 365 Supply Chain Management**, a **Quality Test Group** is a collection of individual quality tests that are grouped together to be applied as a unit during quality inspections. These are used in **quality orders** to ensure consistent and efficient testing processes.

Go Path: Inventory Management → Setup → Quality Control → Test Group

Enter or select following fields

1. On Action Pane, Click a New Button
2. Enter, Test Group, RE_SR
3. Enter, Description, QO Return Sale Order
4. Enter, Acceptable Quality Level, 100.00
5. Select, Item Sampling, a*(2 Pcs)
6. In Overview
 - a. Click a Add Button
 - b. Sequence, 1
 - c. Test, Physical Inspection

To ensure it meets specifications and standards

5. Create Test

In **Dynamics 365 Supply Chain Management**, a **Test** is a core component of the **Quality Management** module. It defines the specific checks or measurements that need to be performed on items during quality inspections.

Go Path: Inventory Management → Setup → Quality Control → Test

Enter or select following fields

1. On Action Pane, Click a New Button
2. Enter, Test
3. Enter, Description
4. Select, Type
5. Select, Test Instrument
6. Select, None
7. On Action Pane, Click a Save Button

Test	Description	Type	Test Instrument	Unit	Specification	Enable specifications in qual
PHYSICAL INSPECTION	REEL- PHYSICAL INSPECTION (OBSERVATION)	Fraction	None	NOS		☐

***Important NOTE:** The reason "Test Instrument" is set to "None" here is because, in the Return Sales Order process, the user is only performing a physical inspection and not using any instruments.

Physical inspection means that the user will visually check the item, and any issues identified will be mentioned in the remarks.

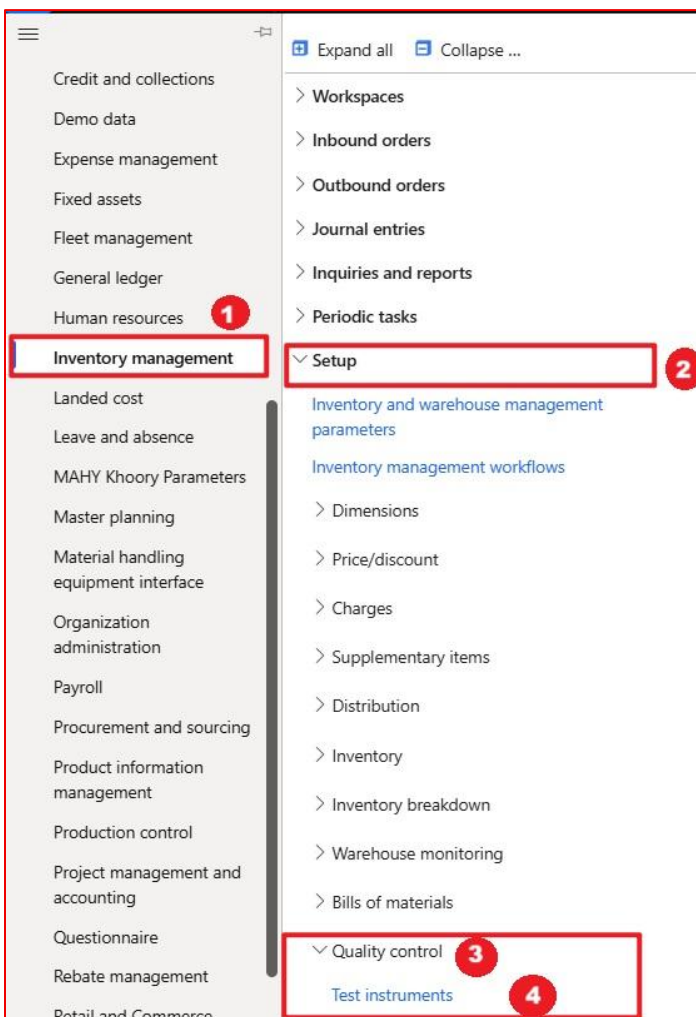

6. Create Test Instrument

In **Dynamics 365 Supply Chain Management**, a **Test Instrument** is a tool or device used to perform quality tests on items during quality control processes. These instruments are part of the **Quality Management** module and help ensure that the correct equipment is used for each type of test.

A **Test Instrument** represents a physical device (like a scale, thermometer, or voltmeter) used to measure specific attributes of a product during a quality test. While optional, defining test instruments can:

- Help standardize testing procedures.
- Ensure traceability of test results.
- Support calibration tracking (in preview features).

Go Path: Inventory Management → Setup → Quality Control → Test Instrument

Enter or select following fields

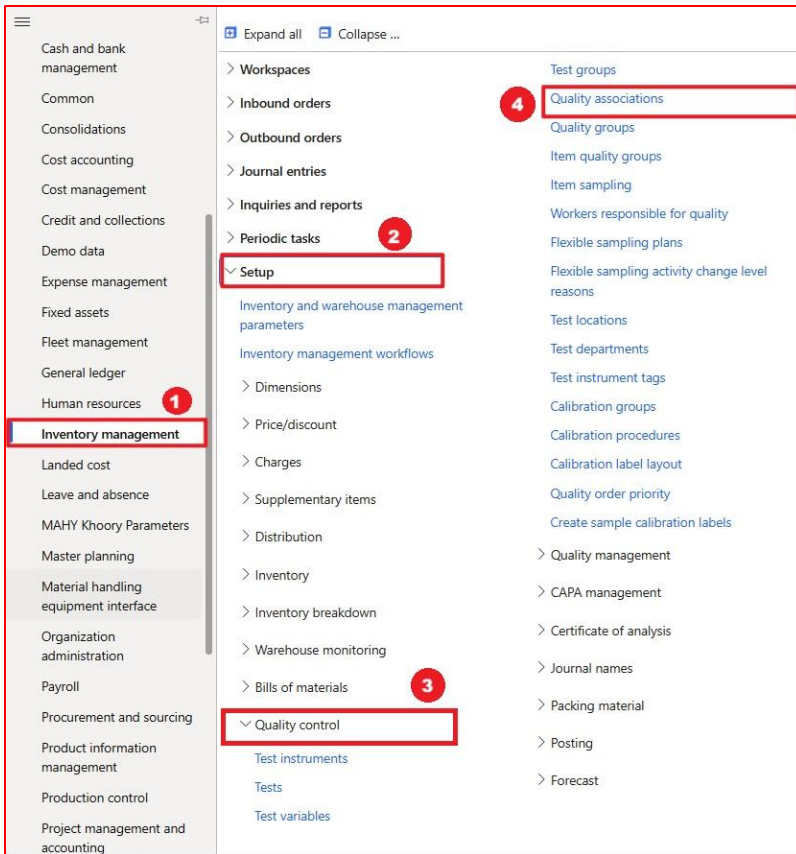

1. On Action Pane, Click a New Button
2. Enter, Test Instrument
3. Enter, Description
4. Select, Unit
5. Enter, Precision
6. On Action Pane, Click a Save Button

Test instrument	Description	Unit	Precision	Tag number	Used for c...	Calibration label la...
Micrometer (21M)	Micrometer (21M)	micron	0.01000			
None	None	NOS	0.00000			
OVEN Moisture	OVEN Moisture (%)	%	0.01000			

7. Create Quality Associates

In **Microsoft Dynamics 365 Supply Chain Management**, a **Quality Association** is a configuration that defines when and how **quality orders** are automatically generated during various business processes like purchasing, production, or sales. etc

Go Path: Inventory Management → Setup → Quality Control → Quality Association

Enter or select following fields

1. On Action Pane, Click a New Button
2. Select, Reference Type, Sale return
3. Select, Item Code, Group
4. Select, Item, QC_Sale_Return
5. Select, Execution, After
6. Enabled, Show info, Yes
7. Select Event Blocking, None
8. Select, Test Group, RE_SR
9. Select, Item Sampling, a*(2 Pcs)
10. On Action Pane, Click a Save Button

The screenshot shows the 'Quality associations' form in a software application. The form is divided into several sections: 'Reference type', 'Item code', 'Item', 'Conditions', 'Process', 'Quality order process', and 'Specifications'. Red boxes highlight the following fields: 'Sales return' under Reference type, 'Group' under Item code, 'QC_Sale_Return' under Item, 'After' under Execution, 'Show info' (Yes) under Process, 'None' under Event blocking, 'RE_SR' under Test group, and 'a*(2 Pcs)' under Item sampling. The 'Save' button in the top left corner is also highlighted.

Process Flow

Quality Order Process- Return Sales

Process Description

The Quality Department of Evergreen Paper is responsible for conducting quality checks, particularly when a paper reel is damaged or has defects. This situation mostly arises as:

1. When the paper reel gets damaged during truck loading
2. Customer returns it.

In this user manual, we will outline the process for assessing the quality of returned paper reels. The Quality Department will conduct an evaluation and provide recommendations. Based on these recommendations, management will decide. The possible recommendations of quality departments

- Quality Change (Downgrade)
- Repulp of Paper Reel
- To Sell out the local market or sell to specific parties
- Partial Accept

Sale Department

The Sales Department will generate the return sales order and receive the damaged reels at the designated location. Three warehouses are involved in this process:

- **FG/PM1-FG/PM2-FG Warehouse in Evergreen site 1 (UPM)**
 - Location: Storage

- **PM3 FG, Warehouse in Evergreen site 2 (ADPM)**

- *Location: Storage*

***Important Note:** While creating a return sale order, the sales department must ensure that any damaged paper reels received are recorded in these specified locations.

Quality Control- Department

QC Department will perform QC Activity when the Sales department creates a return order for the returned from customer to keep in location.

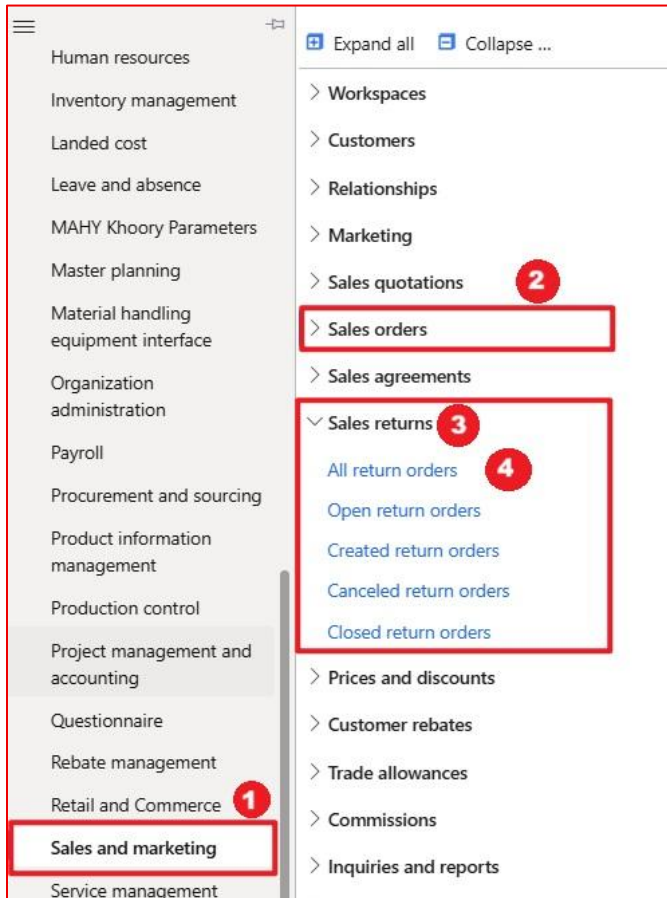

Sale Department- Create Return Order

1. Create Return Order- Overview

In Dynamics 365 Supply Chain Management, a **Return Order** is created when a customer wants to return goods that were previously sold and delivered. This could be due to:

- Defective or damaged items
- Incorrect shipments
- Dead on Arrival
- Wrong Quantity
- Customer dissatisfaction

Go Path: Sale and Marketing → Sale Order → Sale Returns → All Return Orders

Enter or select following fields

1. On Action pane, Click a New Button

The screenshot shows the SAP Return Order interface. The top action pane contains several buttons: 'New', 'Delete', 'Return order', 'General', 'Options', 'Journals', 'Deductions', 'Attachments', and 'Manage quality'. The 'New' button is highlighted with a red box. Below the action pane, the 'Standard view' section displays a table of return orders. The table has columns for RMA number, Customer account, Customer name, Invoice account, Return reason code, Deadline, Return status, and Do not pro... H... The first row is highlighted in blue.

RMA number	Customer account	Customer name	Invoice account	Return reason code	Deadline	Return status	Do not pro... H...

2. Select, Customer Account

3. In Storage Dimensions, Select- Site and Warehouse

4. Select, Return Reason code

The screenshot shows the 'Create return order' form in SAP. The form is divided into several sections: 'Customer', 'General', 'SALES ORDER', 'CURRENCY', 'STORAGE DIMENSIONS', 'RETURN', 'INTERCOMPANY', and 'REFERENCES'. The 'Customer' section has a 'Customer account' dropdown menu with 'C000007498' selected. The 'General' section has a 'Sales order' dropdown menu with 'SO25000001373' selected. The 'SALES ORDER' section has an 'Invoice account' dropdown menu with 'C000007498' selected. The 'CURRENCY' section has a 'Currency' dropdown menu with 'USD' selected. The 'STORAGE DIMENSIONS' section has a 'Site' dropdown menu with 'UPM' selected and a 'Warehouse' dropdown menu with 'PM3 FG' selected. The 'RETURN' section has a 'Return reason code' dropdown menu with 'Damage' selected. The 'INTERCOMPANY' section has an 'Intercompany' checkbox that is unchecked. The 'REFERENCES' section has a 'Customer requisition' text field and a 'Customer reference' text field. The 'OK' and 'Cancel' buttons are at the bottom right.

Quality Department – Quality Order

The Quality Department will receive the quality order from the Sale and Marketing Department.

Go Path: Sale and Marketing → Sale Order → Sale Returns → All Return Orders

The screenshot shows the SAP menu structure. On the left, the 'Inventory management' menu item is highlighted with a red box and a red circle with the number 1. On the right, the 'Periodic tasks' menu item is highlighted with a red box and a red circle with the number 2. Below 'Periodic tasks', the 'Quality management' menu item is highlighted with a red box and a red circle with the number 3. Under 'Quality management', the 'Quality orders' menu item is highlighted with a red box and a red circle with the number 4. The 'Release sales order picking' menu item is also visible and highlighted with a blue star icon.

Enter or select following fields

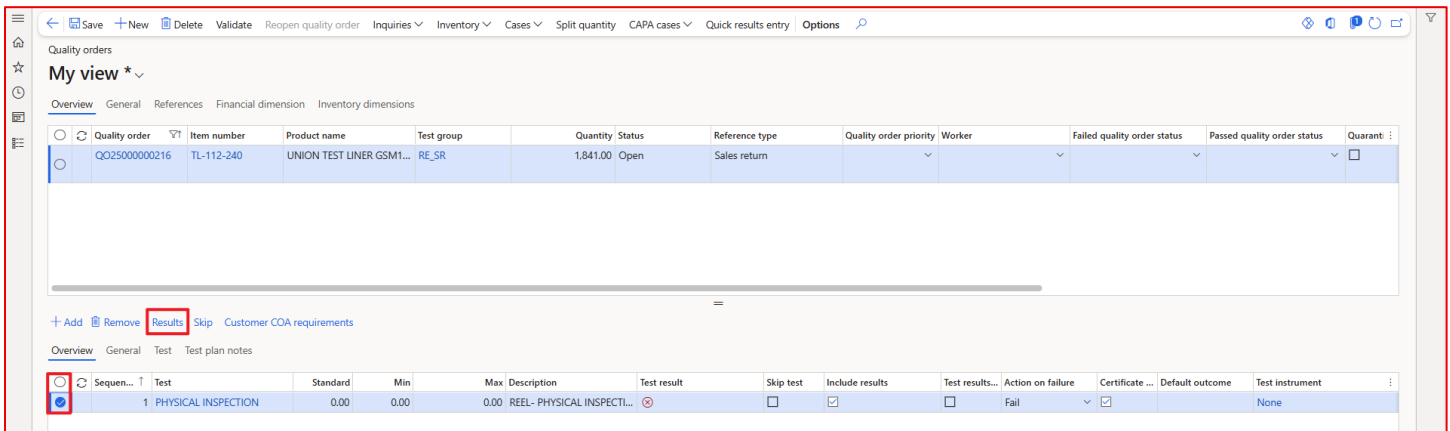

1. On Action pane, Click an Edit

The screenshot shows the 'Quality orders' interface with 'My view' selected. The top action pane contains buttons: Edit, New, Delete, Validate, Reopen quality order, Inquiries, Inventory, Cases, Split quantity, CAPA cases, Quick results entry, and Options. The 'Edit' button is highlighted with a red box. Below the action pane, there is a table with columns: Quality order, Item number, Product name, Test group, Quantity, Status, Reference type, Quality order priority, Worker, Failed quality order status, Passed quality order status, and Quarantine. The table contains one row with data: QO25000000216, TL-112-240, UNION TEST LINER GSM1..., RE_SR, 1,841.00, Open, Sales return. Below the table, there is a section for 'Test plan notes' with a table containing columns: Sequen..., Test, Standard, Min, Max, Description, Test result, Skip test, Include results, Test results..., Action on failure, Certificate..., Default outcome, and Test instrument. The table contains one row with data: 1, PHYSICAL INSPECTION, 0.00, 0.00, 0.00, REEL- PHYSICAL INSPECTL..., Fail, Yes, Fail, Yes, None.

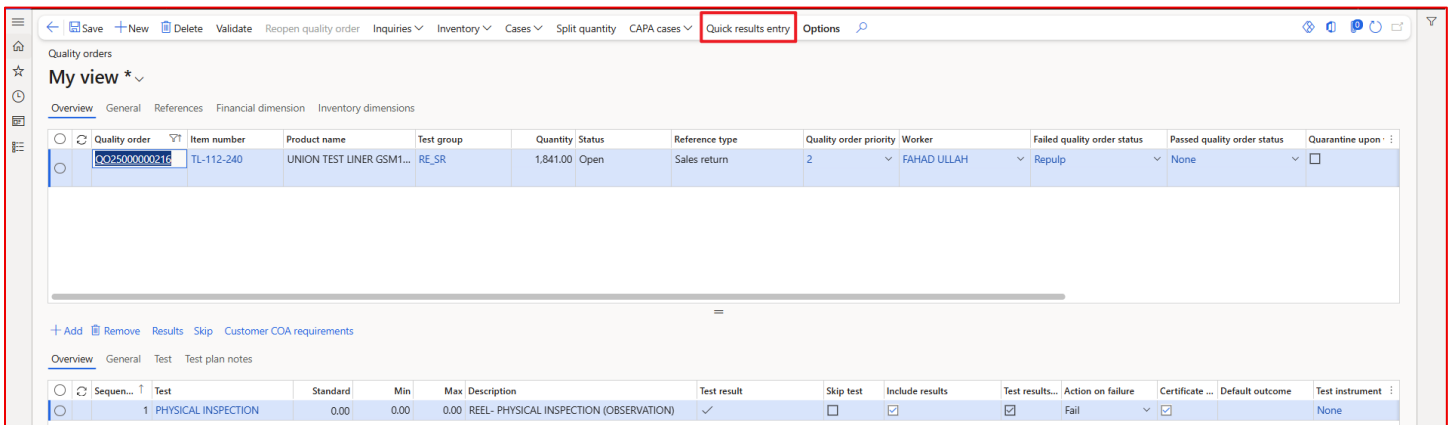

2. Select, Line

3. Click, Results

The screenshot shows the 'Quality orders' interface with 'My view' selected. The top action pane contains buttons: Save, New, Delete, Validate, Reopen quality order, Inquiries, Inventory, Cases, Split quantity, CAPA cases, Quick results entry, and Options. The 'Results' button is highlighted with a red box. Below the action pane, there is a table with columns: Quality order, Item number, Product name, Test group, Quantity, Status, Reference type, Quality order priority, Worker, Failed quality order status, Passed quality order status, and Quarantine. The table contains one row with data: QO25000000216, TL-112-240, UNION TEST LINER GSM1..., RE_SR, 1,841.00, Open, Sales return. Below the table, there is a section for 'Test plan notes' with a table containing columns: Sequen..., Test, Standard, Min, Max, Description, Test result, Skip test, Include results, Test results..., Action on failure, Certificate..., Default outcome, and Test instrument. The table contains one row with data: 1, PHYSICAL INSPECTION, 0.00, 0.00, 0.00, REEL- PHYSICAL INSPECTL..., Fail, Yes, Fail, Yes, None.

4. On Action Pane, Click, Quick Result Entry

The screenshot shows the 'Quality orders' interface with 'My view' selected. The top action pane contains buttons: Save, New, Delete, Validate, Reopen quality order, Inquiries, Inventory, Cases, Split quantity, CAPA cases, Quick results entry, and Options. The 'Quick results entry' button is highlighted with a red box. Below the action pane, there is a table with columns: Quality order, Item number, Product name, Test group, Quantity, Status, Reference type, Quality order priority, Worker, Failed quality order status, Passed quality order status, and Quarantine upon. The table contains one row with data: QO25000000216, TL-112-240, UNION TEST LINER GSM1..., RE_SR, 1,841.00, Open, Sales return, 2, FAHAD ULLAH, Repulp, None. Below the table, there is a section for 'Test plan notes' with a table containing columns: Sequen..., Test, Standard, Min, Max, Description, Test result, Skip test, Include results, Test results..., Action on failure, Certificate..., Default outcome, and Test instrument. The table contains one row with data: 1, PHYSICAL INSPECTION, 0.00, 0.00, 0.00, REEL- PHYSICAL INSPECTION (OBSERVATION), Yes, Yes, Yes, Fail, Yes, None.

***Important NOTE:** The *Quick Entry Result* is a new feature introduced by Microsoft in version 10.0.44. It was not available in earlier versions. This feature allows users to view and enter results for all tests in a single window, without having to open each test one by one. This will save a significant amount of time for users, especially since there can be 15 or more tests to manage

5. Enter Remarks
6. Enter, Result Value
7. Click, Validate

Standard view *
Overview General

Sequence number	Test	Result qua...	Result CW quantity	Result value	Include in ...	Skip test	Test result	Test result	Include in ...	Quality change	Quality order	Remarks	Serial number
1	PHYSICAL INSPEC...	1,841.00	1	1	☒	☐	☒	Fail	☒		QO25000000216	This Reel has been minor Rejected, it should be repulped	M3-25-033253

***Important NOTE:** I must enter the value because the user's requirement is to record the "open value," meaning they will write whatever they physically observe in the remarks.

Considering this requirement, the test configuration has been done based on "friction" (categorization), because if we had used the option-based method, we would have needed to define a list of options. So, if we input a result value, we'll have to give it as "1", which will be considered a failure case. If I want to accept the item, I won't enter any result value, and it will be considered as accepted.

However, in this document, a rejected/fail case has been shown because usually, in customer return scenarios, the material received is mostly defective or has some issues in the finished goods.

8. Select, Worker
9. Select, Failed Quality order status
10. Select, Passed Quality order status
11. Enter, Remark
12. On Action Pane, Click, a validate
