

Sales invoice posting through batch job in D365 F&O

A guide for setting up sales invoice posting batch job Dynamics 365 Finance and Operations

Introduction

Sales order invoices are posted manually, which is time-consuming and cause to human error. Automating this process through batch jobs will allow for bulk processing of invoices based on specific criteria, improving productivity and accuracy.

Scope

The scope of this requirement includes:

- Creating a batch job for posting sales invoices.
- Configuring parameters to filter invoices based on specific criteria (e.g., date, customer, status).
- Scheduling the batch job for regular execution.
- Monitoring the status and success of the batch job.

Business Requirements

- The system must allow users to create a new batch job specifically for posting sales invoices.
- Users must be able to define the various parameters for the batch job:
- The system must allow users to schedule batch jobs to run at specified times (immediate or future).
- Recurrence options must be available to automate regular postings (e.g., daily, weekly).
- Users must be able to manually post any invoices that were not processed successfully by the batch job.
- The batch posting process should complete within a defined timeframe to ensure timely posting of invoices.
- Access to batch job creation and monitoring must be restricted to authorized personnel only.

Business Scenario

- Businesses has requirement to auto post sales invoice whenever sales order delivered.

Process Steps

- Go to Accounts receivable > Invoices > Batch invoicing > Invoice
- Click Select and add criteria to identify which SO or packing slip is eligible to post invoice.
- Click OK
