

To create and manage data import and export jobs, you use the Data management workspace. By default, the data import and export process create a staging table for each entity in the target database. Staging tables let you verify, cleanup, or convert data before you move it.

Once, within the data management work area, new projects can be created to export and import system information.

Export

Navigate to WorkSpaces > Data Management

Click on **Export**

Fill in the fields “Group Name” and “Description” with the name of the project. i.e Vendor Export

The screenshot shows the 'New Record' form in the 'Export' section. The 'Group name' and 'Description' fields are highlighted with a red box and contain the text 'Vendor Export'. The 'Data project operation type' is set to 'Export'. The 'Project category' is set to 'Project'. The 'Generate data package' is set to 'No'. The 'Group ID' is a long alphanumeric string. Below the form, there is a 'Selected entities' section with a table that is currently empty.

Click on "Add Entity" and first select the "Entity Name" that you want to export and then the "Target Data Format" selecting the format in which you want to export the system information.

Finally, click on “Add” to add the entity to the export list.

The screenshot shows the 'Add entity' dialog box. The 'Entity name' is set to 'Vendors V2' and the 'Target data format' is set to 'EXCEL'. The 'Add' button is highlighted. The dialog box also includes options for 'Use sample file' (set to 'No'), 'Skip staging' (set to 'Yes'), 'Default refresh type' (set to 'Full push only'), and 'Select fields' (set to 'All fields').

Once all the entities you need to export have been selected, click the export now button.

Import

Navigate to WorkSpaces > Data Management

Click on Import

The screenshot displays the Microsoft Dynamics 365 user interface. At the top, there is a navigation bar with several tabs: "Import favorites", "Set up a device to r...", "Implementation too...", "Collections | Micros...", "Dynamics 365 guida...", "Security roles and p...", and "Create a ma". Below this is a dark blue header bar with the text "Finance and Operations" and a search bar labeled "Search for a page".

The main content area is titled "Data management". Under this title, there is a section labeled "Import / Export" which contains a row of blue buttons. The "Import" button, which features a downward arrow icon, is highlighted with a red rectangular box. Other buttons in this row include "Export" (upward arrow), "Templates" (document icon), "Configure data source" (gear icon), "Configure entity export to database" (gear icon), "Data entities" (list icon), "Framework parameters" (gear icon), "Set up roles for data projects" (magnifying glass icon), "Copy into legal entity" (document with arrow icon), "Data task automation" (gear icon), "Dual-write" (circular arrow icon), "Virtual Entity" (list icon), and "Job history cleanup" (trash can icon).

Below the "Import / Export" section is a "Data projects" section. It includes a left-hand sidebar with a list of project categories: "All projects", "Import projects", "Export projects", "Copy into legal entity projects", "Configuration", "Integration", "Package API", and "Other". The main area of this section has a filter input field and buttons for "Run project", "Load project", "Delete", and "Download". Below these are columns for "Data project name", "Project type", and "Project category". The main area currently displays a message: "We didn't find anything to show here." accompanied by a circular icon with a document and a plus sign.

Create the new import project and fill in the “Group Name” and “Description” fields. i.e Vendor Import

Click on Add File

In Job details Source Data format Select Excel

In entity name Select Vendors V2

Click on Upload and add and select vendors file to upload.

Close all screens and Click on Import Now.

Refresh the next screen until Job is succeeded.
