

How to design and work with email templates in Microsoft Dynamics 365 Finance and Operations

The email templates help Microsoft Dynamics 365 Administrators to design the templates according to the business user requirement.

In this article we shall learn how to design a dynamic email template and send an email using the email template. We shall configure the email template for the Inventory transfer journal workflow that will send an email to the approver with the dynamic content designed in the email template.

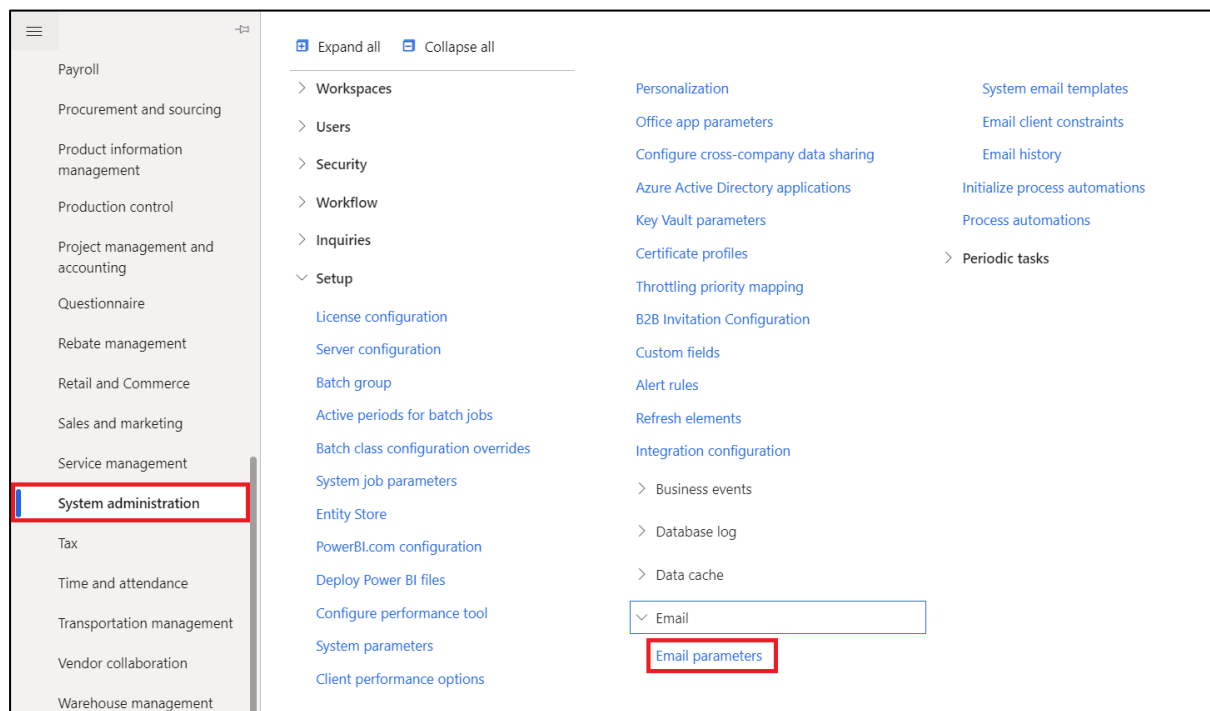

Here are few important things to note before sending an email from Microsoft Dynamics 365 Finance and Operations using email templates.

1. Email parameters and connection with the email service provider
2. Email distributor batch
3. Enable users to receive notifications via email
4. Email template

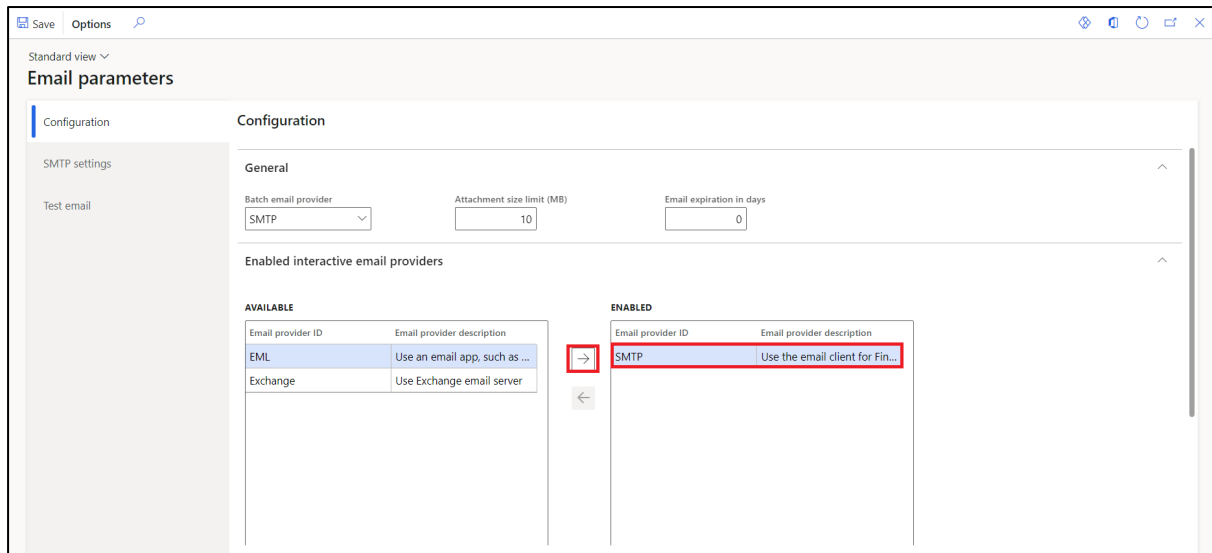

Email parameters:

Email parameters are simply the credentials for the email service provider. The emails sent from the Microsoft Dynamics 365 Finance and Operations use the credentials set in the parameter.

Navigation: System administration > Setup > Email > Email parameters

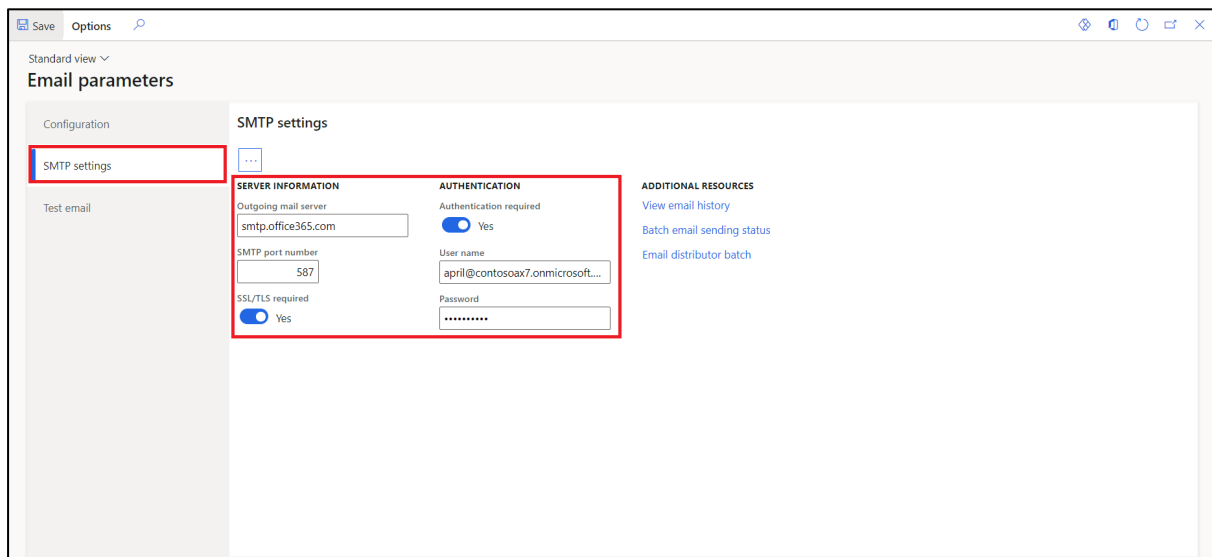

Select the email service provider from the available list and click on arrow button to enable as an email service.

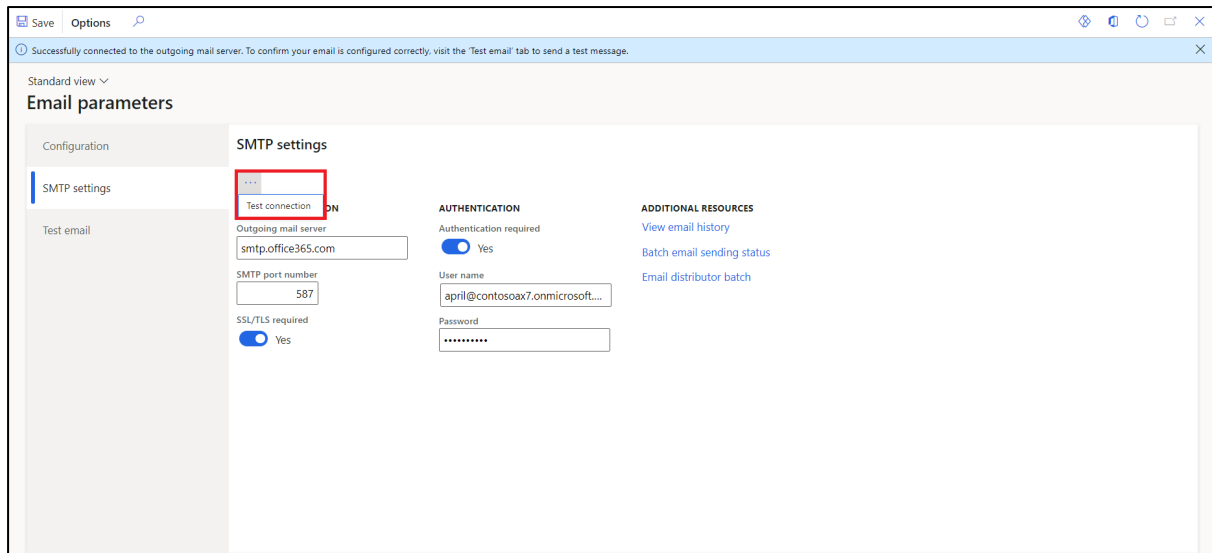

Click on SMTP settings tab.

Enter the Outgoing mail server, SMTP port number, Username and Password.

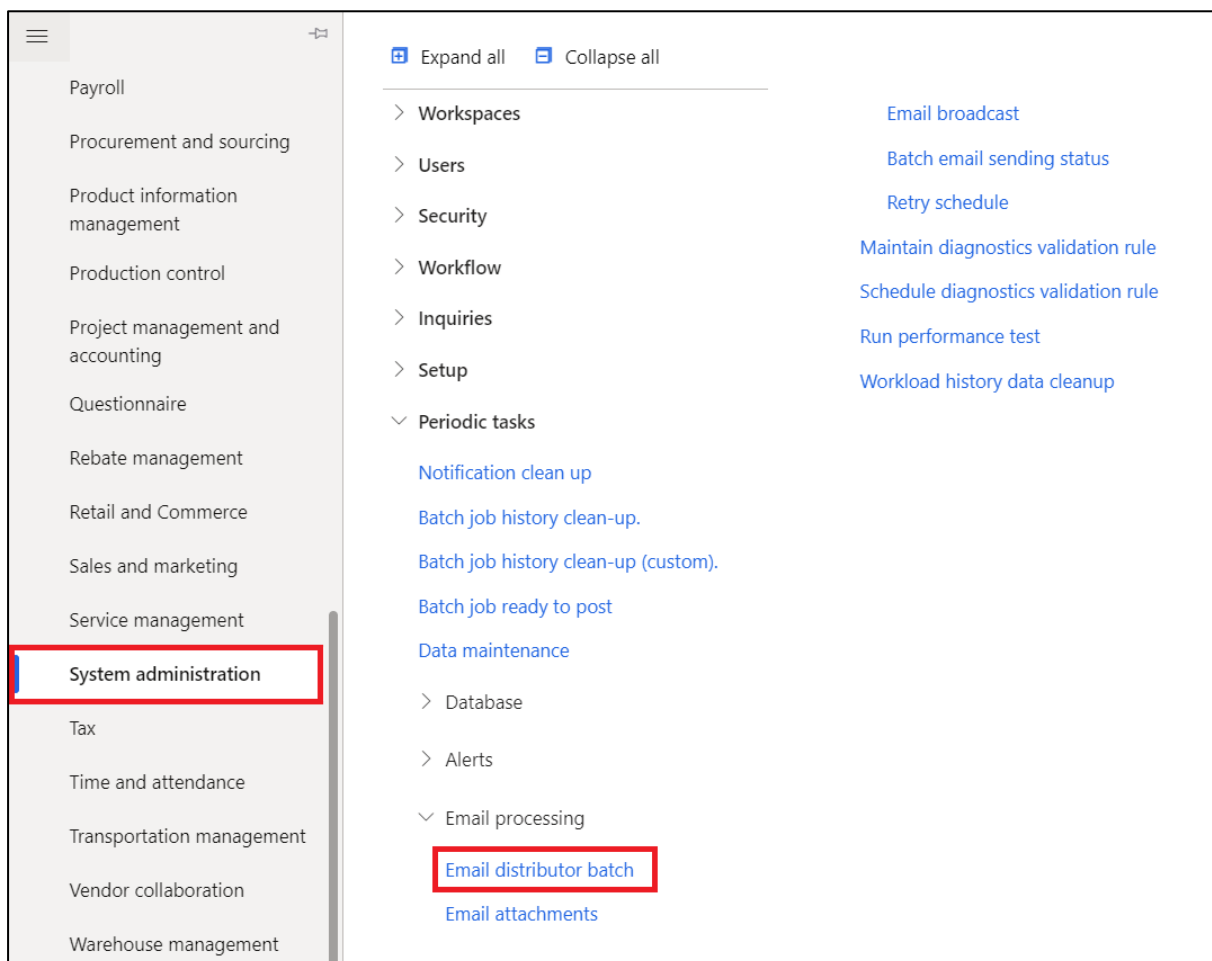

After entering the credentials, click on the triple dots and click Test connection. You will be able to see the success if the credentials are correct.

Email distributor batch:

Email distributor batch is a background batch job that keeps running on a recurrence base and forwards the email as soon as the task for email sending is created through any source.

Navigation: System administration > Periodic tasks > Email processing > Email distributor batch

Click on Recurrence button to set this job to keep running for a set time period.

?

Enable users to receive emails and alerts:

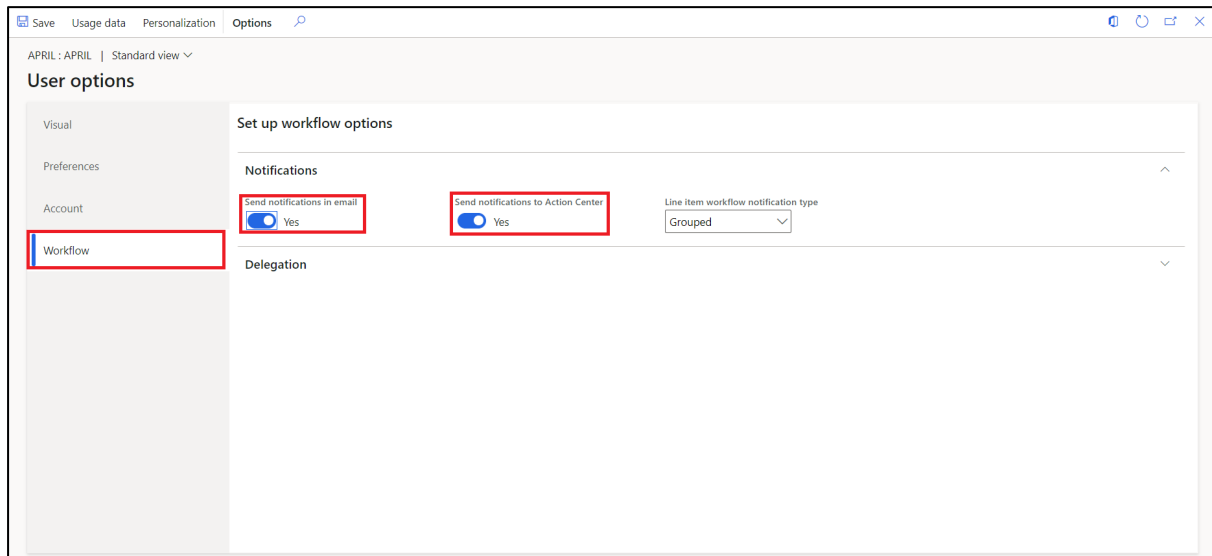

Navigation: System administration > Users > Users

On the Users list page, click on User options button.

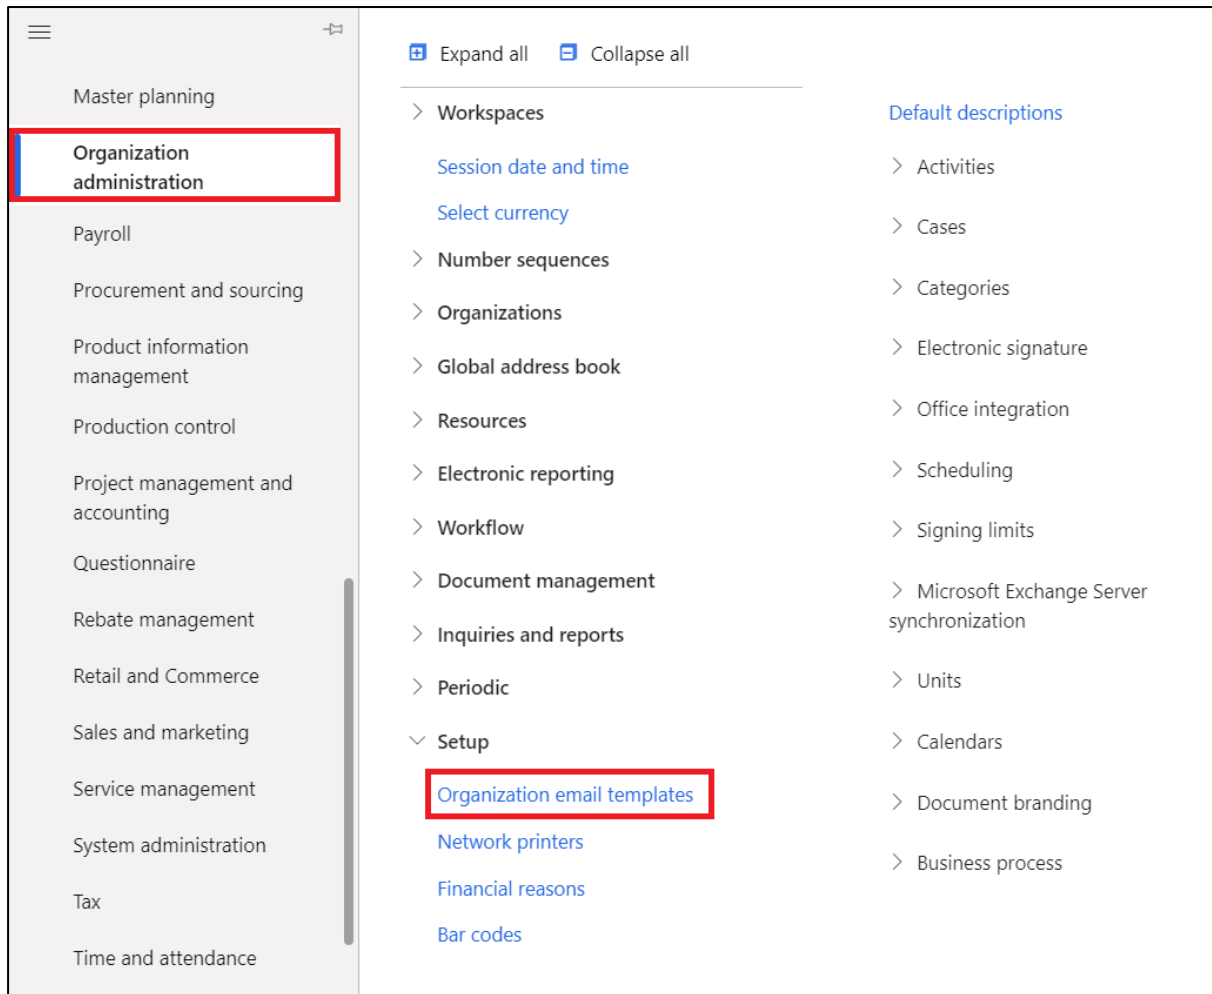

In the workflow tab, select 'Send notifications in email' and select 'Send notifications to Action Center'.

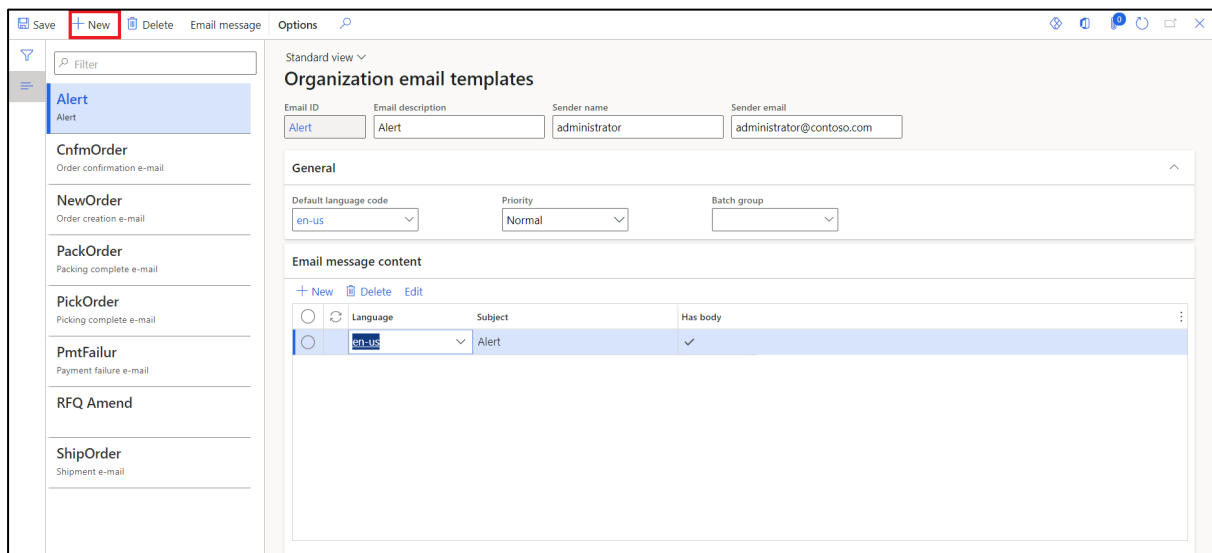

Email templates:

Now let us jump to email templates and configure an email template that will send dynamic data to the recipients in the emails.

Navigation: Organization administration > Setup > Organization email templates

On the email templates page, click New button.

Enter the email template id in the email id field.

Enter the email template name in the email description.

Enter the sender name in the sender name field. This name will appear with the email as a sender that we shall see later in this article.

Enter the sender email id in the sender email field. The email for this email template will be send from this email id.

Select the Language.

Select the Priority for the email template. This will prioritize the emails sent using this email template according to the priority set here.

Now there are two most important things about the email template content.

- Subject of the email
- Message body of the email

Let us first understand the **Subject**.

Click New button in the Email message content.

Select the language.

You can enter the static text (e.g. [INTERNAL]) and for the dynamic information in the subject, just enter %subject% which will fetch the dynamic information and prepare the dynamic email subject according to the placeholders set the work item subject filed in the workflow.

Save + New Delete Email message Options

Email ID: TJApproval Email description: Transfer Journal Approval email Sender name: Dynamics 365 Administrator Sender email: admin@contosoax7.onmicrosof...

General

Default language code: en-us Priority: Normal Batch group:

Email message content

+ New Delete Edit

Language	Subject	Has body
en-us	[INTERNAL] - %subject%	

Click on Browse button to upload the HTML file that contains the code which will fetch the information from the relevant document.

After selecting the file, click on Upload button.

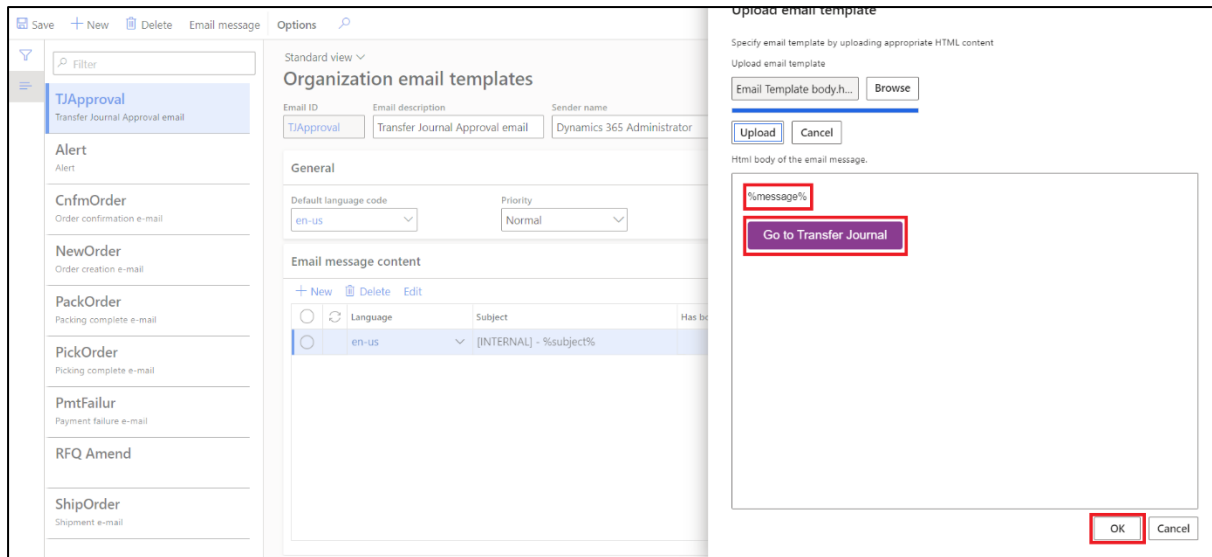

After uploading, email template shows the preview of the HTML code that is uploaded.

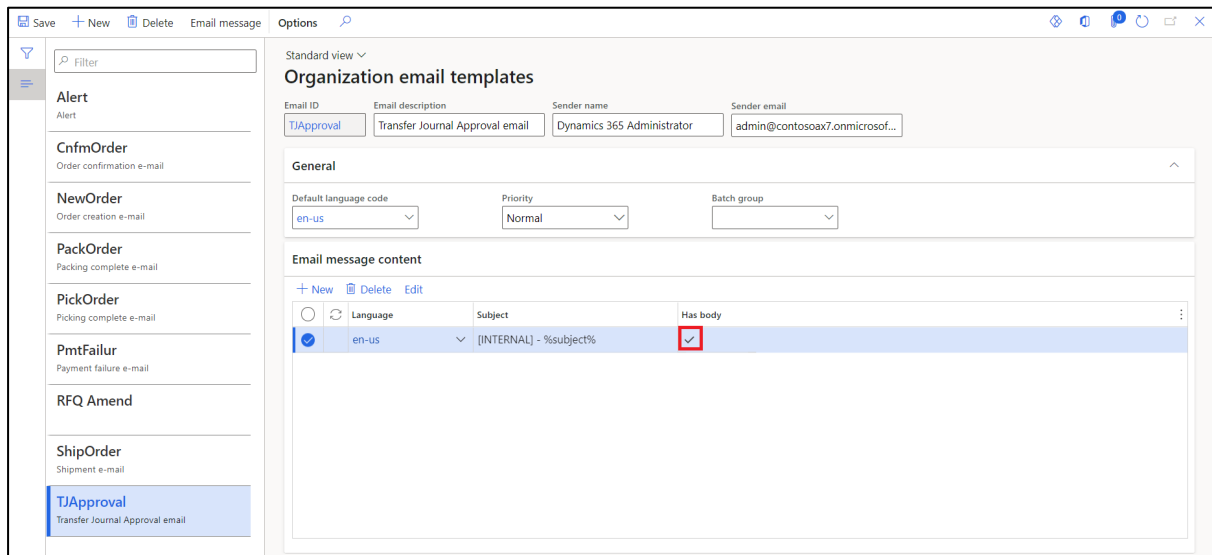

%message%: It is simple piece of HTML code that fetches the message body from the workflow work item instruction field.

Go to Transfer Journal: It is button that is built on a simple HTML code. This button has the link to Microsoft Dynamics 365 Finance and operations. Here is the HTML code file attached for reference.

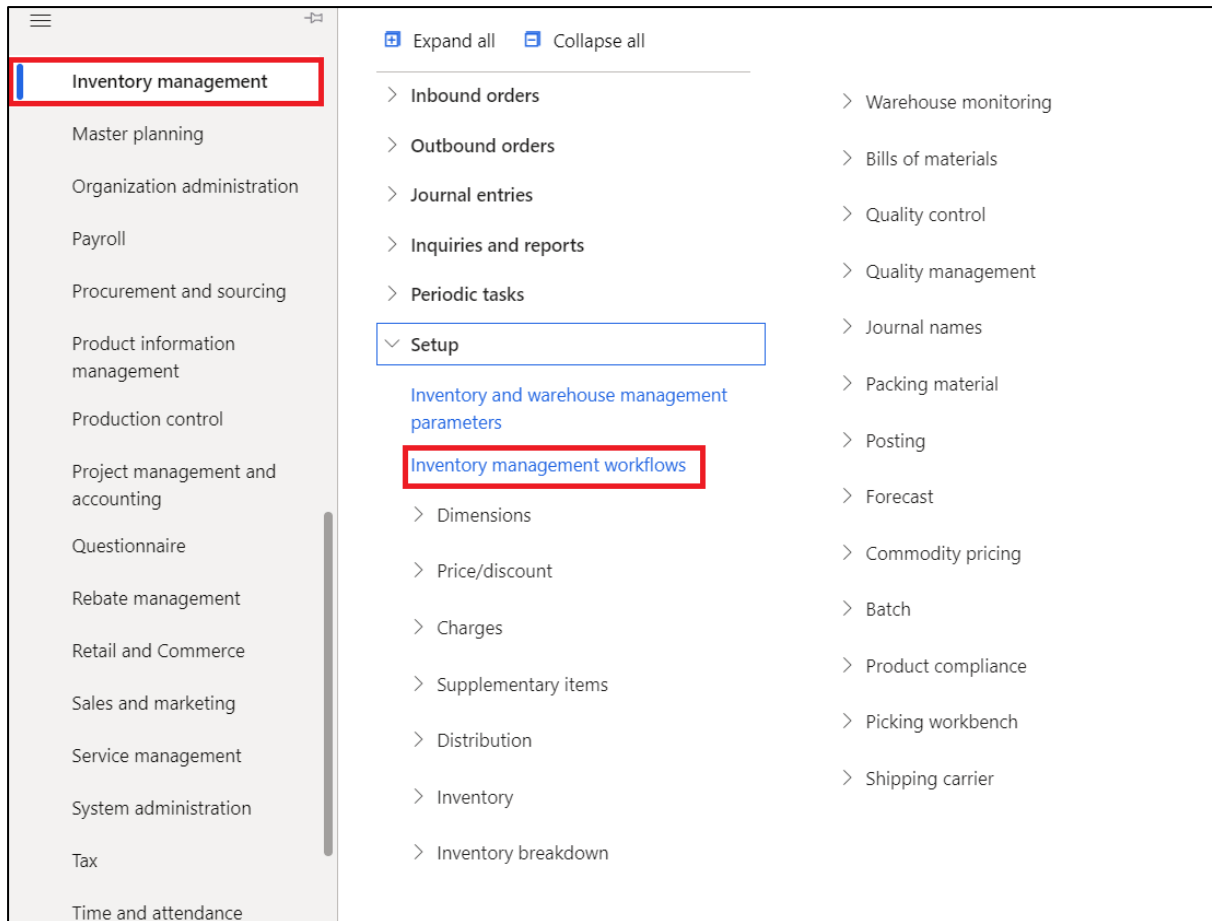

Once the message file is uploaded successfully, the 'Has body' gets checked which means this email template has the message body to send with email.

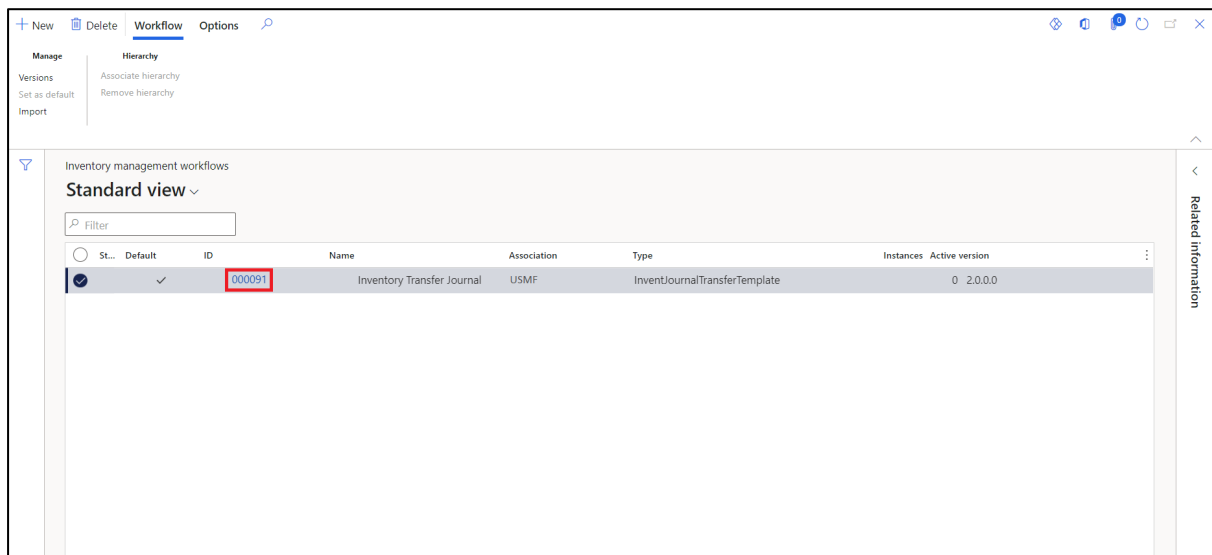

Inventory transfer journal workflow:

The email template has been created and ready use. Now let us associate the email template with the Inventory transfer journal workflow that will send the email using the associated email template and show the email content as per the email template.

Navigation: Inventory management > Setup > Inventory management workflows

Click on ID to open the inventory management workflow.

Now sign into workflow tool using the credential of you Microsoft dynamics 365 account.

Sign in to your account

Welcome to USMF (<https://www.microsoft.com>) World !

[Terms of use](#) [Privacy & cookies](#) ...

Click on Workflow and then click on Basic settings.

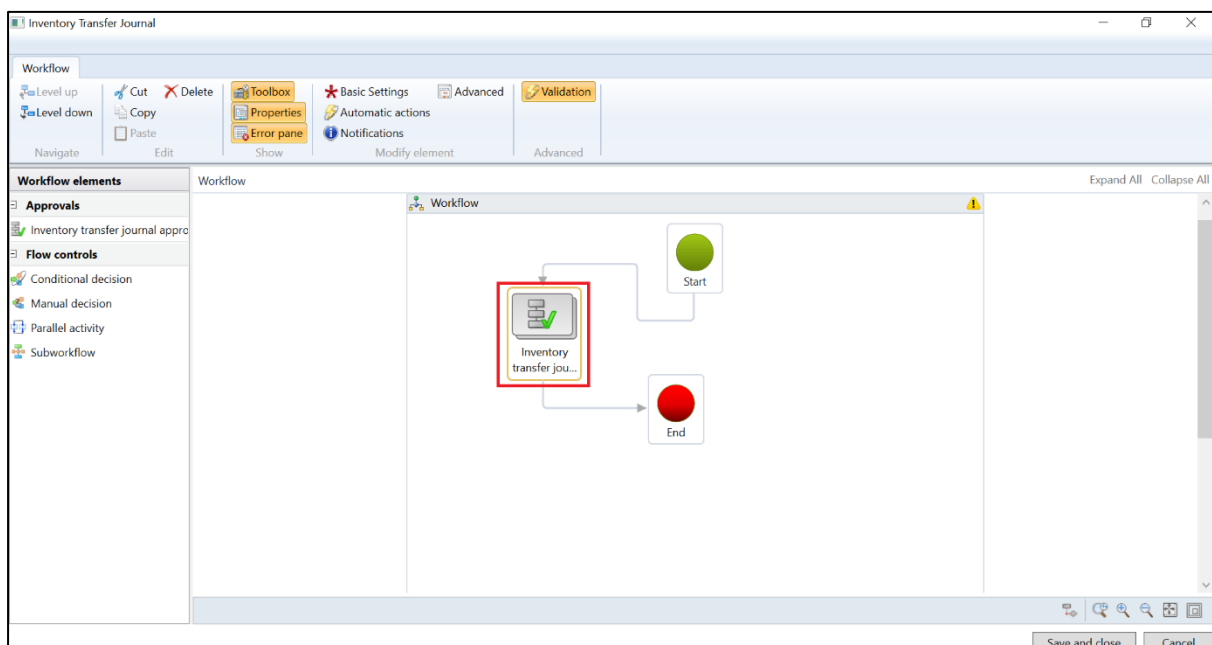

In the basic settings tab, the email template that we created is shown in the Email template for workflow notifications tab. Select the email template and click Close button.

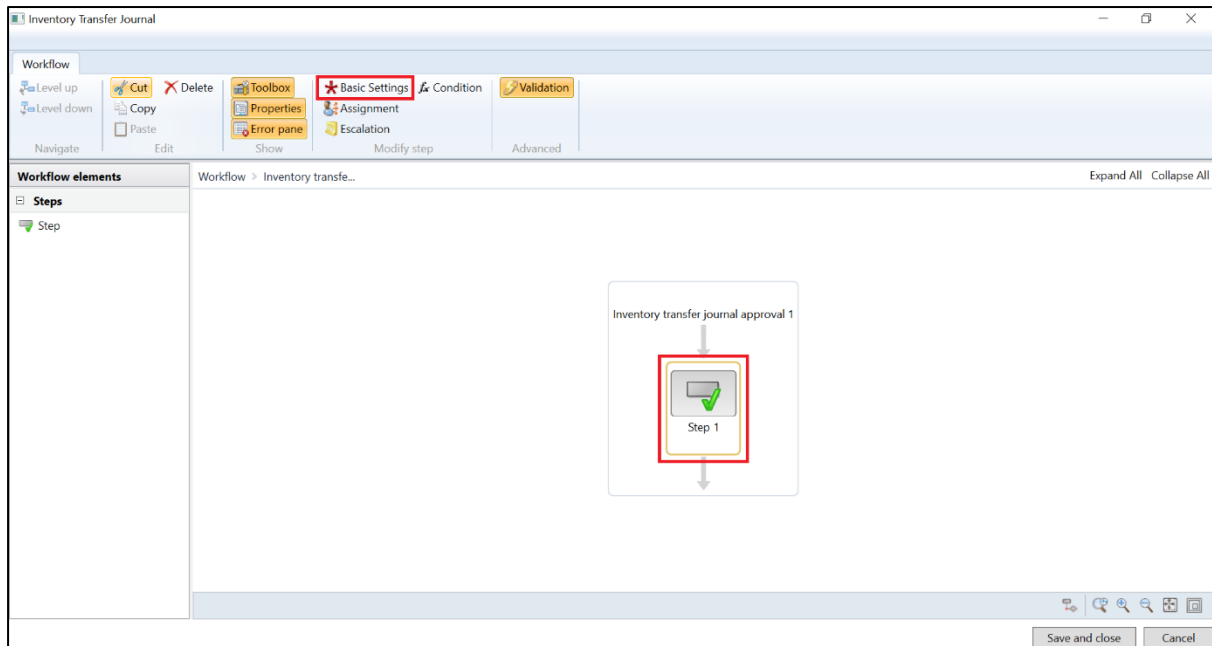

Now let us design the dynamic Subject and Message body of the workflow approval email.

Double click on the Inventory transfer journal approval element.

Select the approval step and click on Basic settings button.

In the work item subject and Work item instructions you can enter both the static and dynamic text.

The static text appears as it is in the email subject and message body.

The dynamics text appears from the relevant journal. Here is the dynamic text that we have set. The dynamic text is bolded in the following example.

Work item subject:

Request to approve Transfer journal **%Inventory journal table.JournalId%** From **%Inventory journal table.InventLocationId%**

Work item instructions:

A Transfer journal has been submitted for your Approval.

Company: USMF

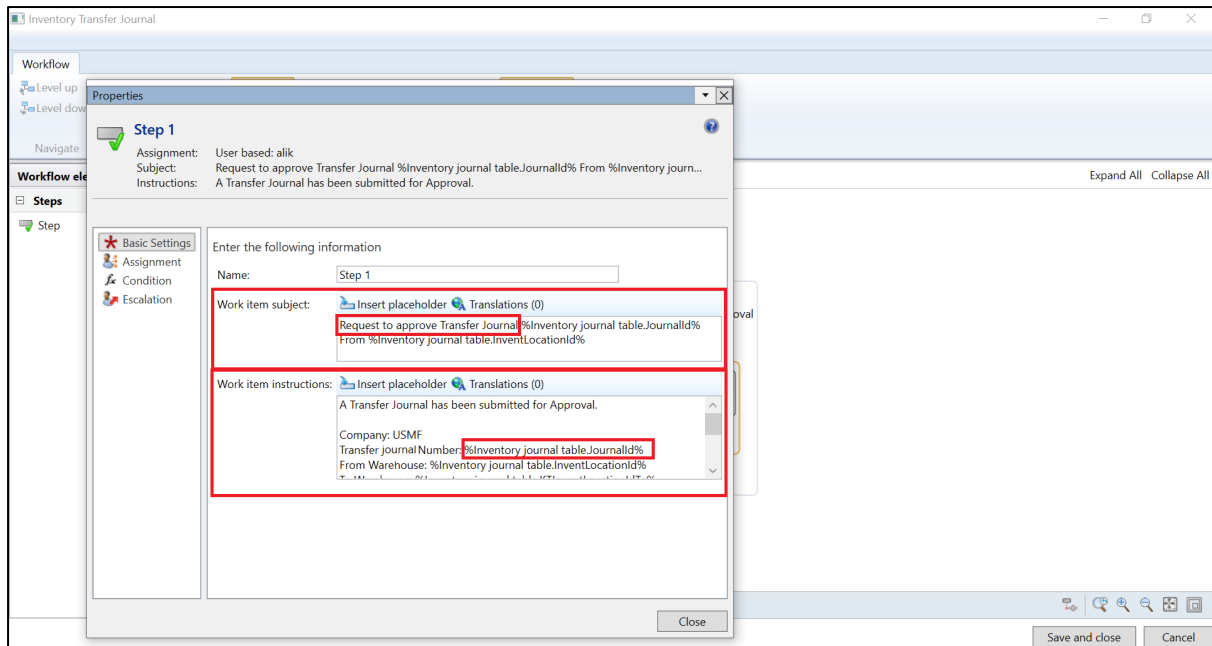

Transfer Journal Number: **%Inventory journal table.JournalId%**

From Warehouse: **%Inventory journal table.InventLocationId%**

Total lines: **%Inventory journal table.NumOfLines%**

Click below to view the Journal.

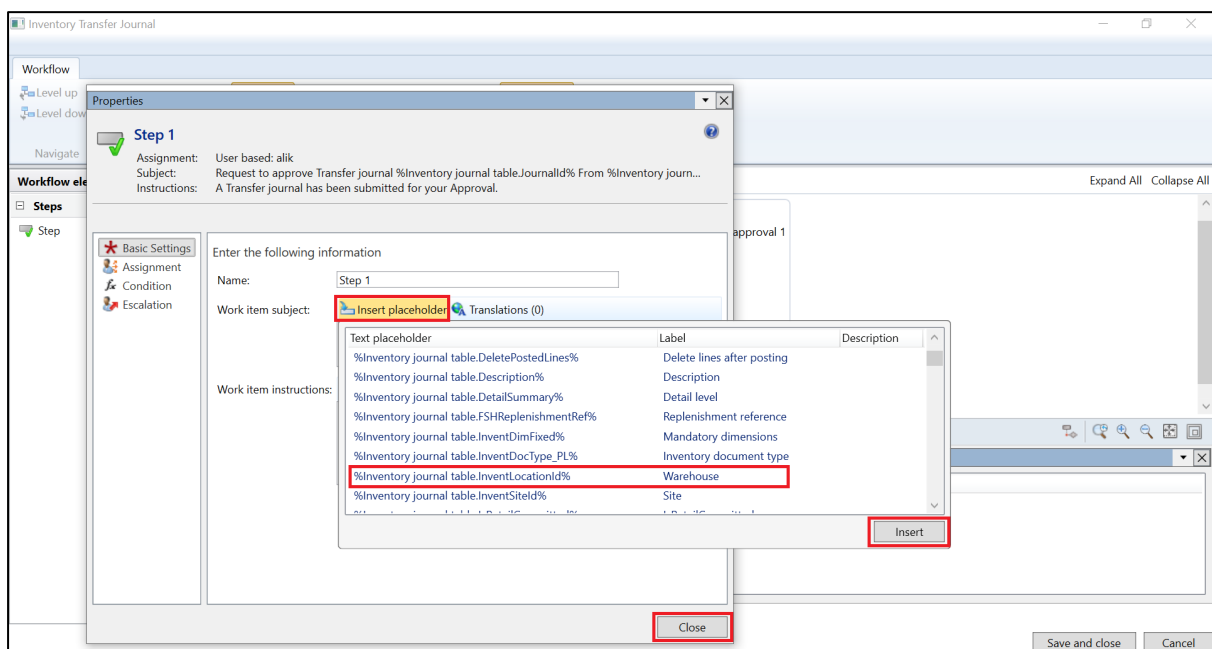

Thanks

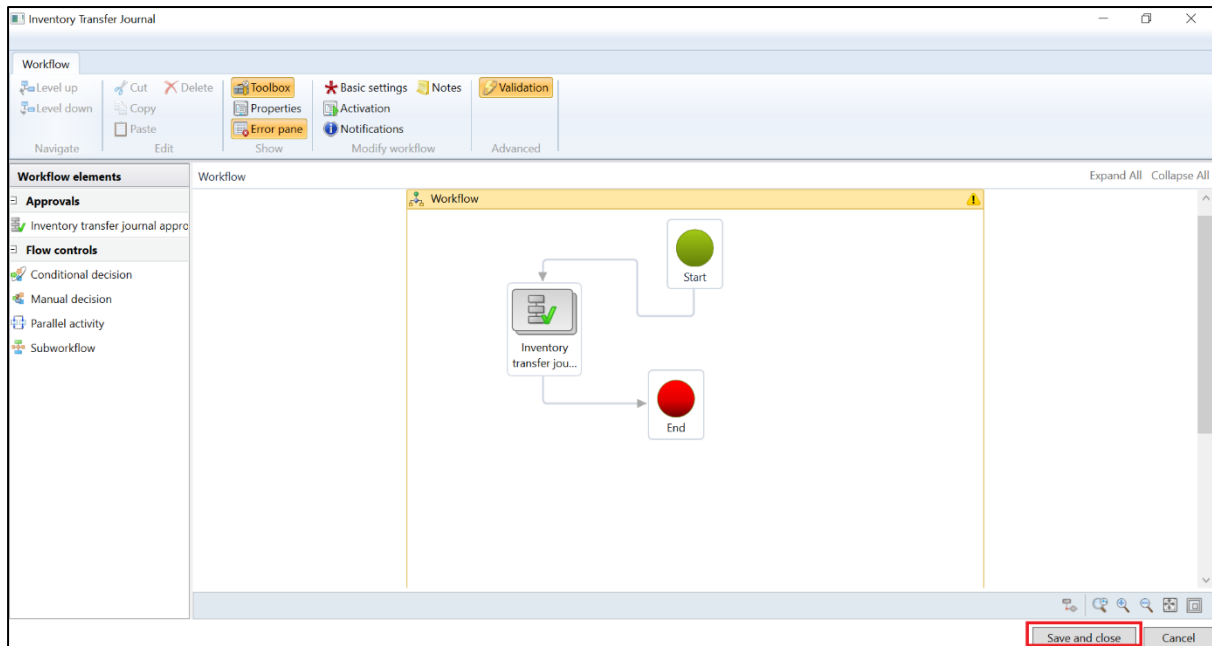

Here is how you can enter the dynamic text using the placeholders.

Click on placeholder button and you will be able to see all the fields from the Inventory Transfer journal table. Select the required field and click Insert button.

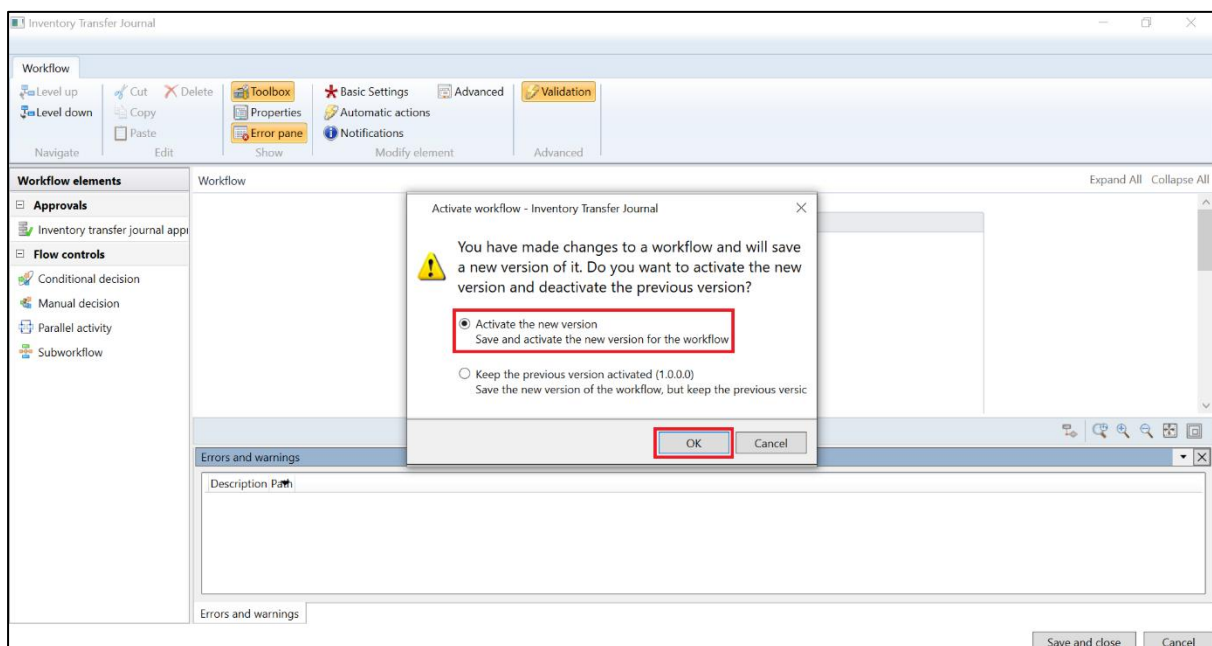

Click close button.

Click Save and close button.

Select Active new version and click Ok button.

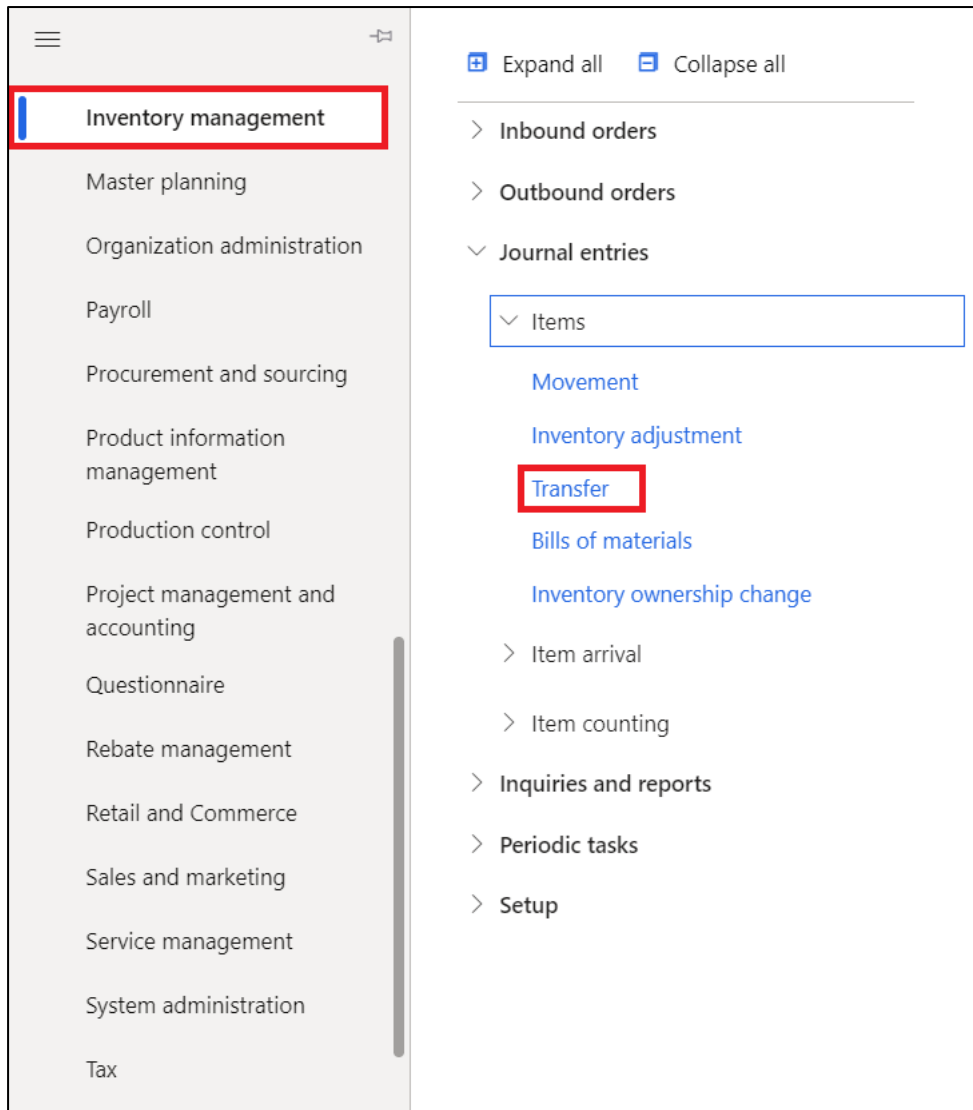

Transfer journal:

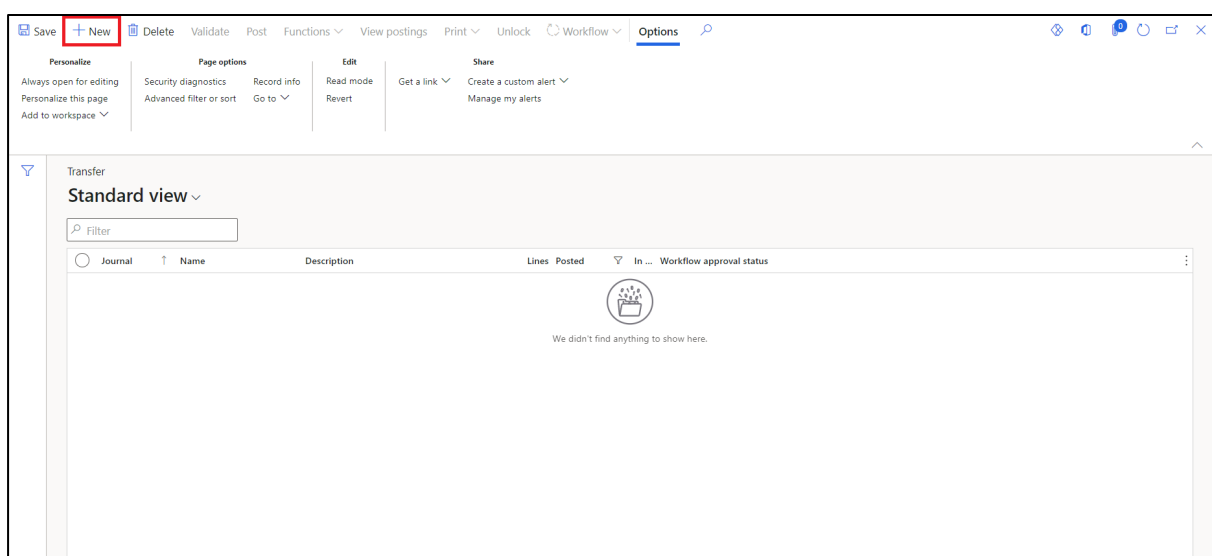

Now we are all set to trigger an email.

Let us create an Inventory transfer journal and submit for approval which will send an email to the approver.

Navigation: Inventory management > Journal entries > Items > Transfer

On the Inventory transfer journal page, click New button.

Select Site and Warehouse and click Ok button.

Create inventory journal

Enter the comments for the approver and click Submit button which will generate an email and approval work for the approver.

The screenshot shows the 'Inventory Transfer Journal - Submit' modal window. The 'Submit' button is highlighted with a red box. The modal contains a 'Comment' field with the text 'Transfer journal approval required.'

Inventory Transfer Journal - Submit

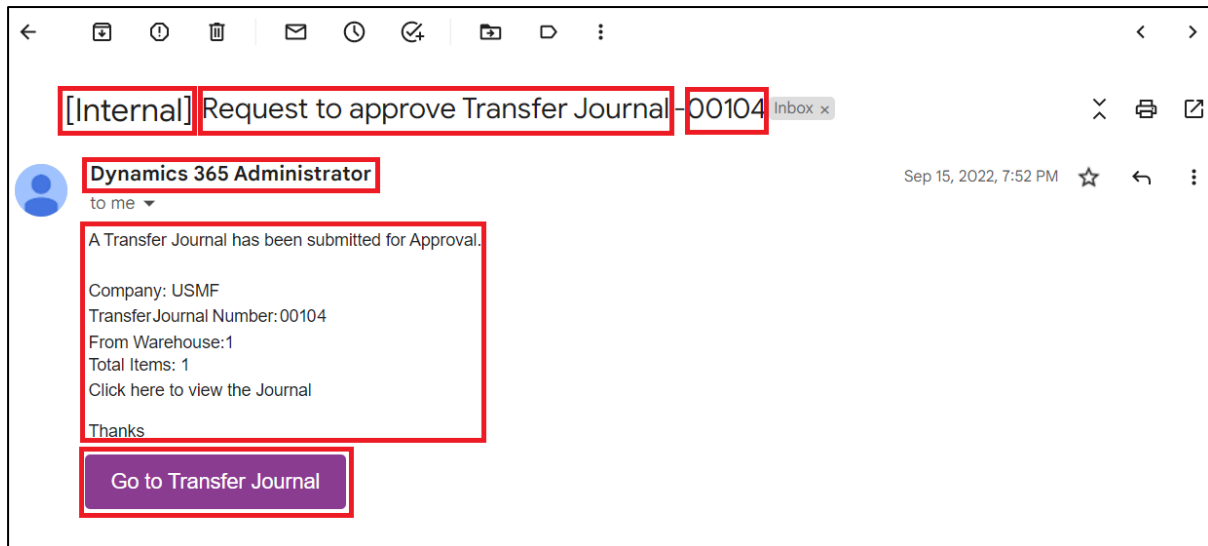

Comment
Transfer journal approval required.

Submit **Cancel**

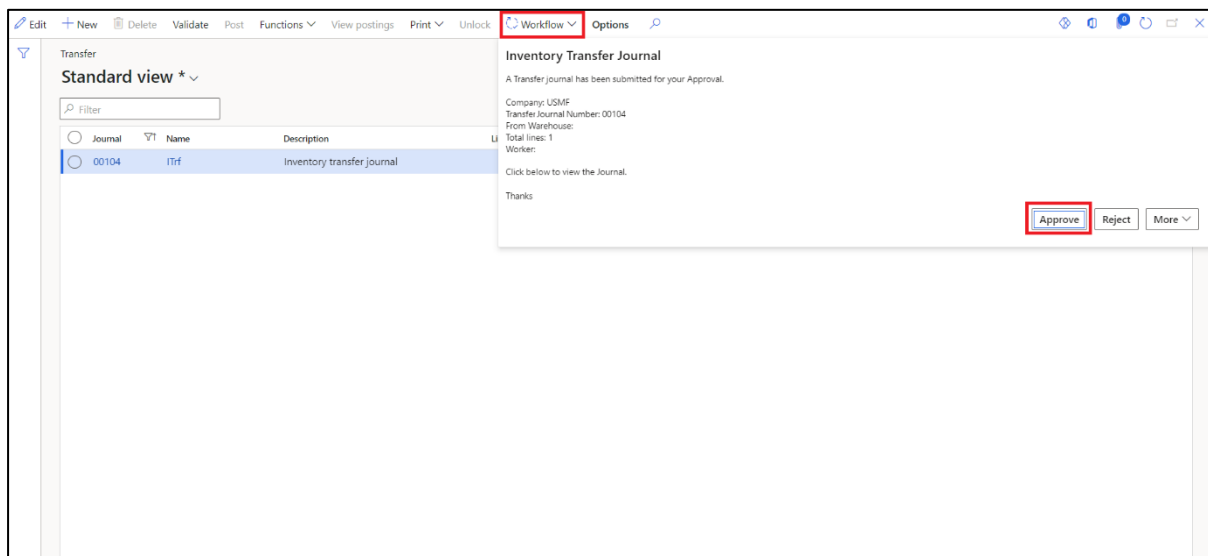

Here is the email that the approver has received on submitting the Inventory transfer journal by requester.

The following information has been highlighted separately in the email:

- The static text from the email template.
- The static text from the work item subject and work item instructions from the workflow.
- The dynamic inventory journal number, From warehouse and number of lines from the workflow.
- The email sender from the sender name field of email template.

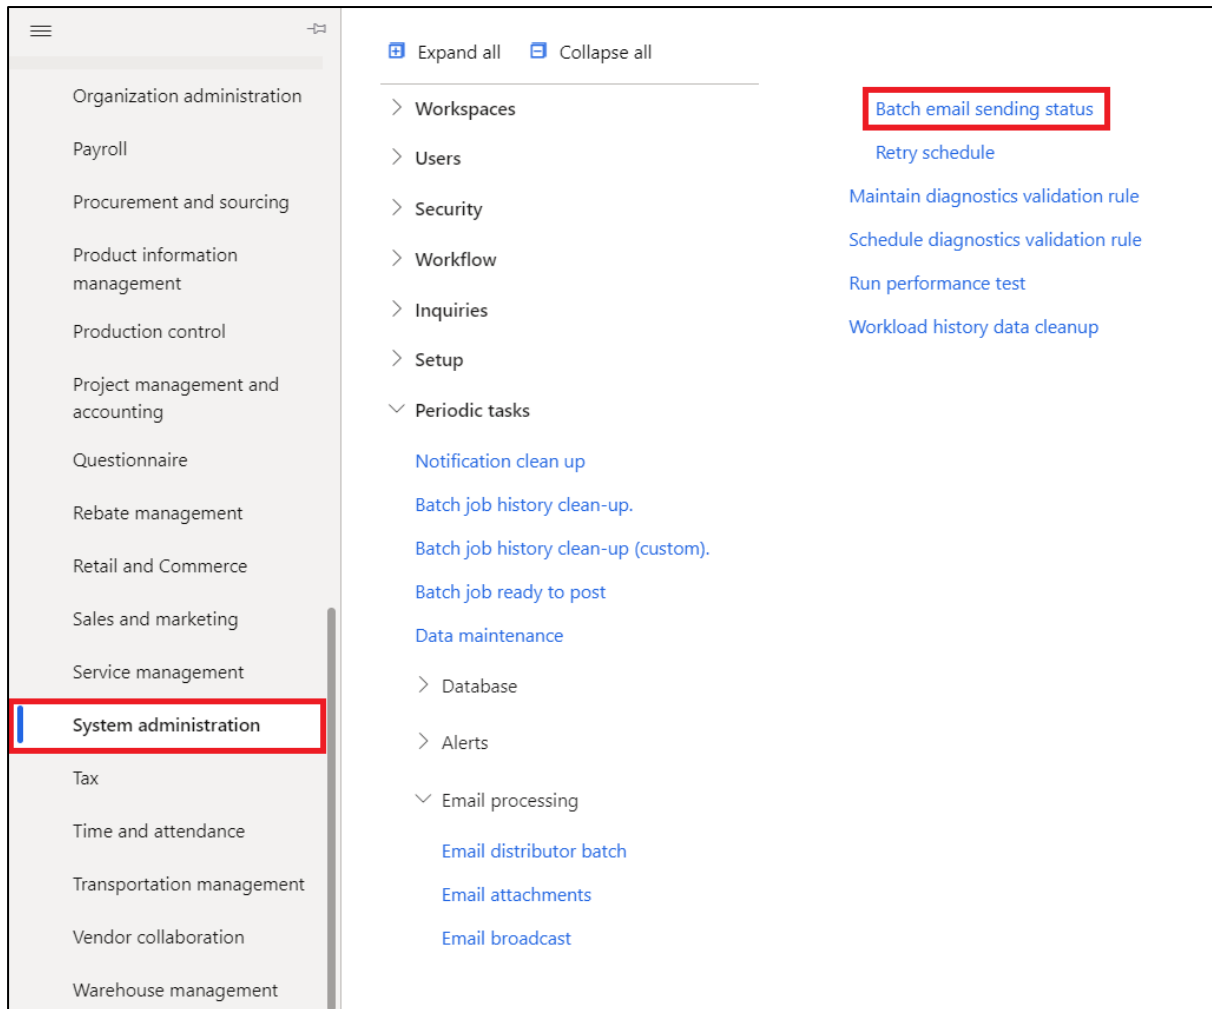

Click on 'Go to Transfer Journal' button to go to the Journal and approve.

You can also see the email message on the **Batch email sending status:**

Navigation: System administration > Periodic tasks > Email processing > Batch email sending status

Here is the list of all emails. Select the Transfer Journal Approval email and click on Show message button.

Takeaways:

Dynamics 365 Administrators can design the email templates that contains static and dynamic information. The email templates prepare the email message as per the content and send the email.
