

WHITE PAPER

DYNAMICS 365 COPILOT

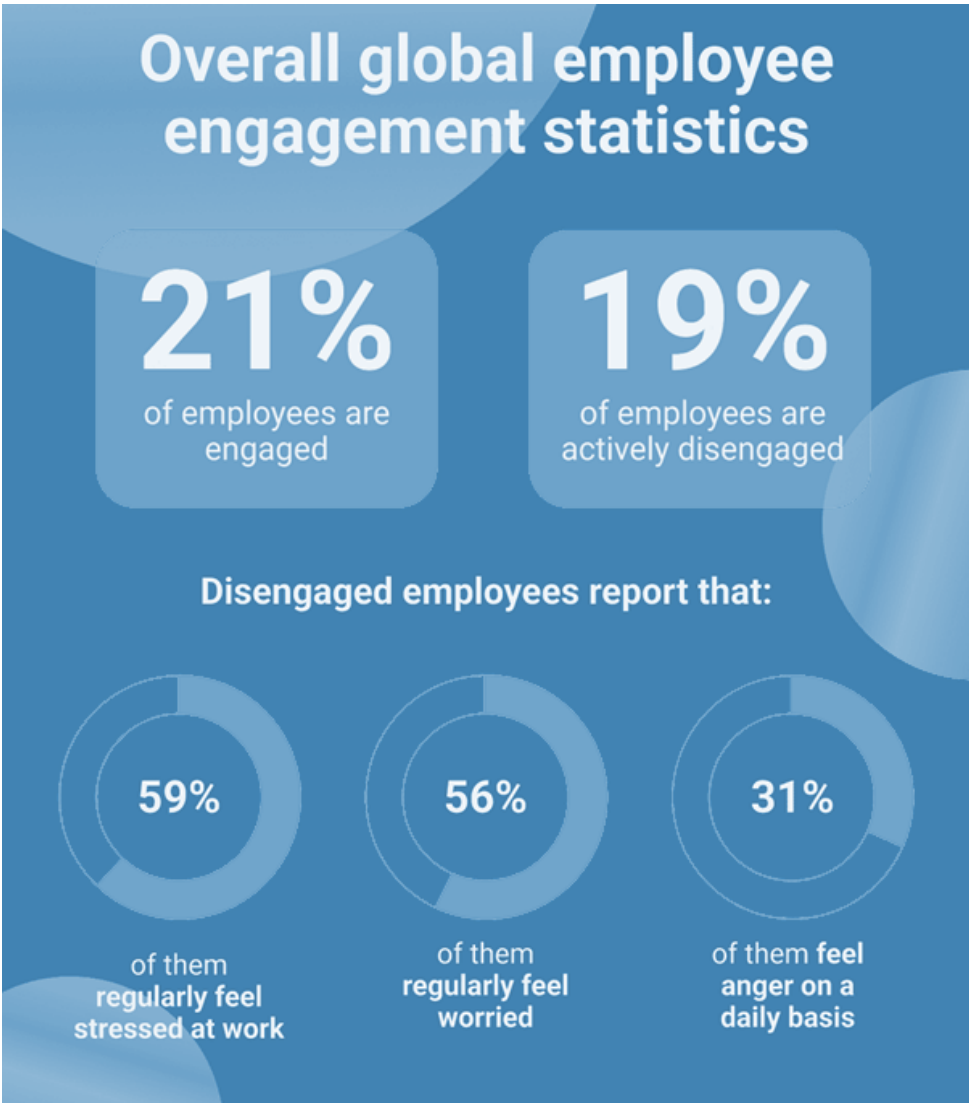

A COMPREHENSIVE GUIDE

INTRODUCTION

A productive organization is a successful organization. Yet, with the plethora of tasks that must be completed every day, workforce productivity often takes a backseat. A large percentage of the global workforce today reports feeling stressed and exhausted at the workplace. While [employee engagement](#) reached 33% in 2023, several challenges continue to plague organizations across sectors.

Source: [Pumble](#)

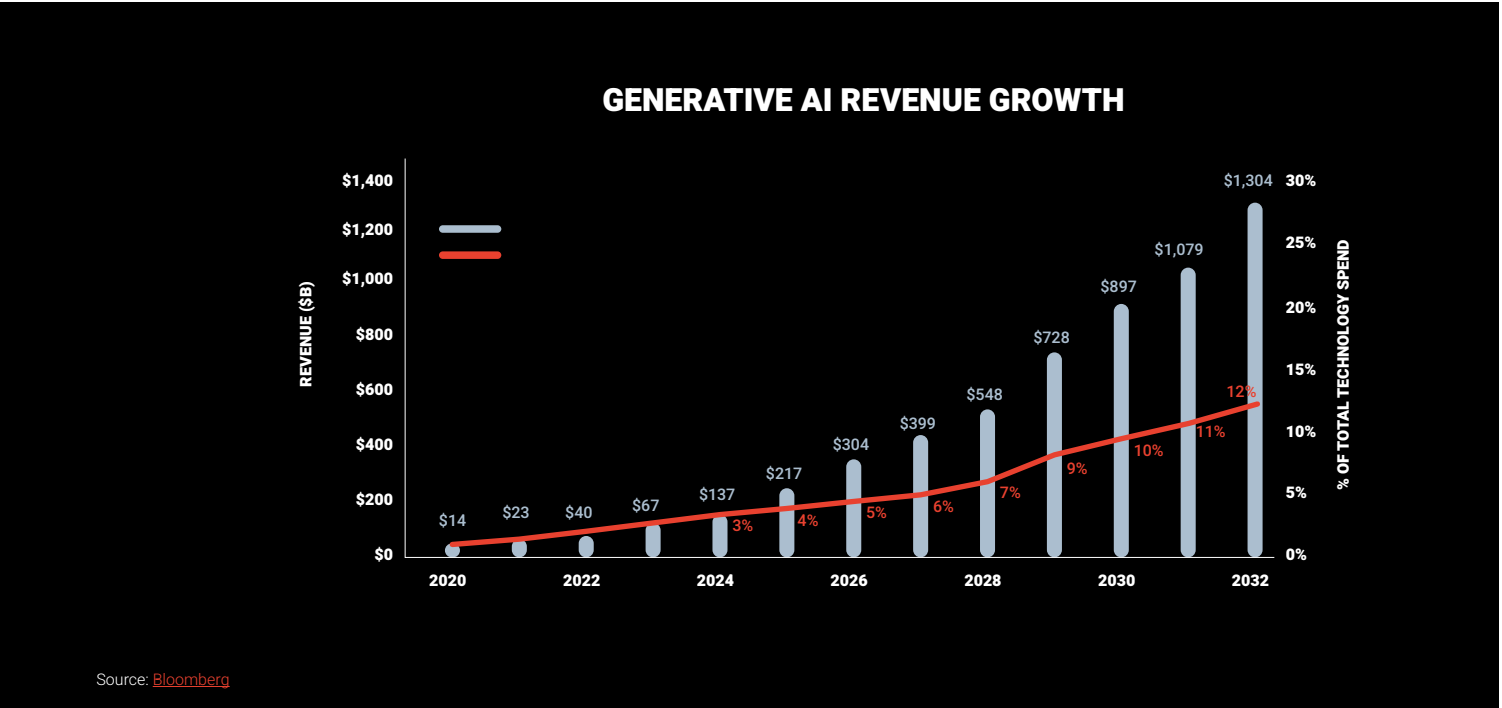

A majority of employees are quietly quitting their jobs, costing the [global economy](#) \$8.8 trillion in losses, or 9% of global GDP. Not only are these numbers demotivating, but they also reflect heavily on an organization’s reputation and market standing. If organizational leaders want to navigate an uncertain economic outlook, addressing these concerns and improving engagement should be top priorities. One sure-shot way of achieving this is by investing in Artificial Intelligence (AI) tools that eliminate mundane and repetitive tasks and make employees’ daily jobs a lot easier.

Dynamics 365 Copilot specifically addresses this challenge that organizations are increasingly facing today. Offering a diverse array of generative AI (Gen AI) capabilities across various Dynamics 365 applications, it aims to minimize the daily burden of routine [tasks](#) and maximize productivity. With the generative AI market poised

to explode, growing to \$1.3 trillion over the next 10 years, Dynamics 365 is just what today’s organizations (and employees) need to boost engagement and efficiency.

In this white paper, we will shed light on:

- An overview of Dynamics 365 Copilot
- Key features and functionalities
- Real-world use cases and success stories
- Dynamics 365 copilot implementation best practices
- Future innovations and roadmap

DYNAMICS 365 COPILOT: AN OVERVIEW

Customer relationship management (CRM) and enterprise resource planning (ERP) platforms have long been helping organizations manage mission-critical customer and business data sources. However, most of these platforms still require users to spend a lot of time entering data and generating reports. But However, advancements in AI are causing a paradigm shift in the workplace. Did you know? [AI and automation tools](#) make 89% of employees feel more fulfilled because they can spend more time on work that truly matters.

[Microsoft Dynamics 365 Copilot](#) exploits recent developments in generative AI technology to automate tedious day-to-day tasks. An interactive, AI assistant feature for Dynamics applications and services, Copilot empowers users with AI tools that minimize strain and boost productivity. It offers several capabilities for employees holding sales, service, marketing, operations, and supply chain roles.

SALES

- Recap sales meetings
- Craft customer emails

MARKETING

- Generate content ideas
- Create audience segments
- Simplify customer insights

SERVICE

- Create customer responses
- Enhance self-service bots

SUPPLY CHAIN

- Predict disruptions

OPERATIONS

- Create product descriptions

As the world's first AI copilot for both CRM and ERP, Dynamics 365 Copilot enables GPT-powered capabilities and offers crucial AI-powered assistance, helping business professionals in every role to:

- **Generate ideas and content faster**
- **Automate tasks quickly**
- **Get intelligent insights on the next best actions**

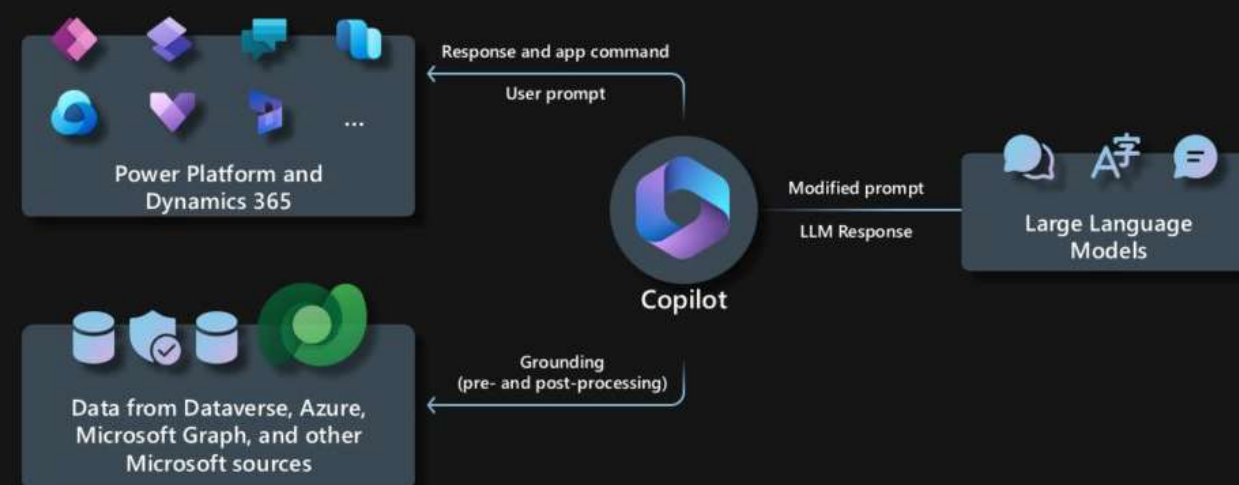

So, how does Dynamics 365 Copilot work its magic? There are several foundational elements that power this AI assistant feature and enable it to deliver recommendations and suggestions. These include:

- **Large Language Models**, or LLMs, that understand and generate human-like text. LLMs are hosted privately on Microsoft's Azure OpenAI Service. These Gen-AI models help Dynamics 365 Copilot understand user inputs and generate relevant responses. They also enable it to create contextually relevant and syntactically correct content based on patterns learned from training data.
- **Natural Language Processing** is core to Dynamics 365 Copilot. The technology helps Copilot understand, interpret, and respond to human language in a meaningful way. Using concepts like tokenization, semantic and sentiment analysis, and language translation, Copilot simplifies complex paragraphs by breaking down the text into smaller chunks, understanding the underlying meaning, context, and emotion, and capturing user intent more accurately.
- **A Semantic index** constructs an intricate map of user and company data. It helps in establishing important connections and identifying significant relationships – just like the human brain. It enables Copilot to interpret and encode the conceptual relationships between data elements and deliver personalized, relevant, and actionable responses.
- **Microsoft Graph** binds all the services and data that Copilot relies on together. As a unified AI endpoint, it enables Copilot to securely access data from other Microsoft and non-Microsoft solutions and associated intelligence. Dynamics 365 Copilot uses Microsoft Graph to synthesize and search content from multiple sources – without having to navigate away or switch apps.
- **Microsoft 365 apps** such as Word, Excel, PowerPoint, Outlook, Teams, and Loop play a huge role in establishing the context for Copilot to work. Similarly, Microsoft Chat enables Copilot to understand user intent and provide ongoing dialogue – thus offering users a simpler way to work with multiple apps.

With Microsoft 365 Copilot, we're giving people more agency and making technology more accessible with advanced AI and the most universal interface: natural language

—Satya Nadella

- Receive suggestions about additional customer segments and match customers that fit a select profile.
- Describe new customer segments in their own words using the query assist feature and expand their reach.
- Get recommendations for campaign content based on trending topics, existing emails, and a range of online sources.
- Proactively target audience segments and deliver personalized marketing experiences across physical and digital channels.

- **Sales:** For sales teams, exploring, analyzing, and understanding customer segments and accordingly offering products requires deep analysis of customer behavior and preferences. Copilot in **Microsoft Dynamics 365 Sales** and **Viva Sales** helps sellers greatly cut down the time they spend on clerical tasks.

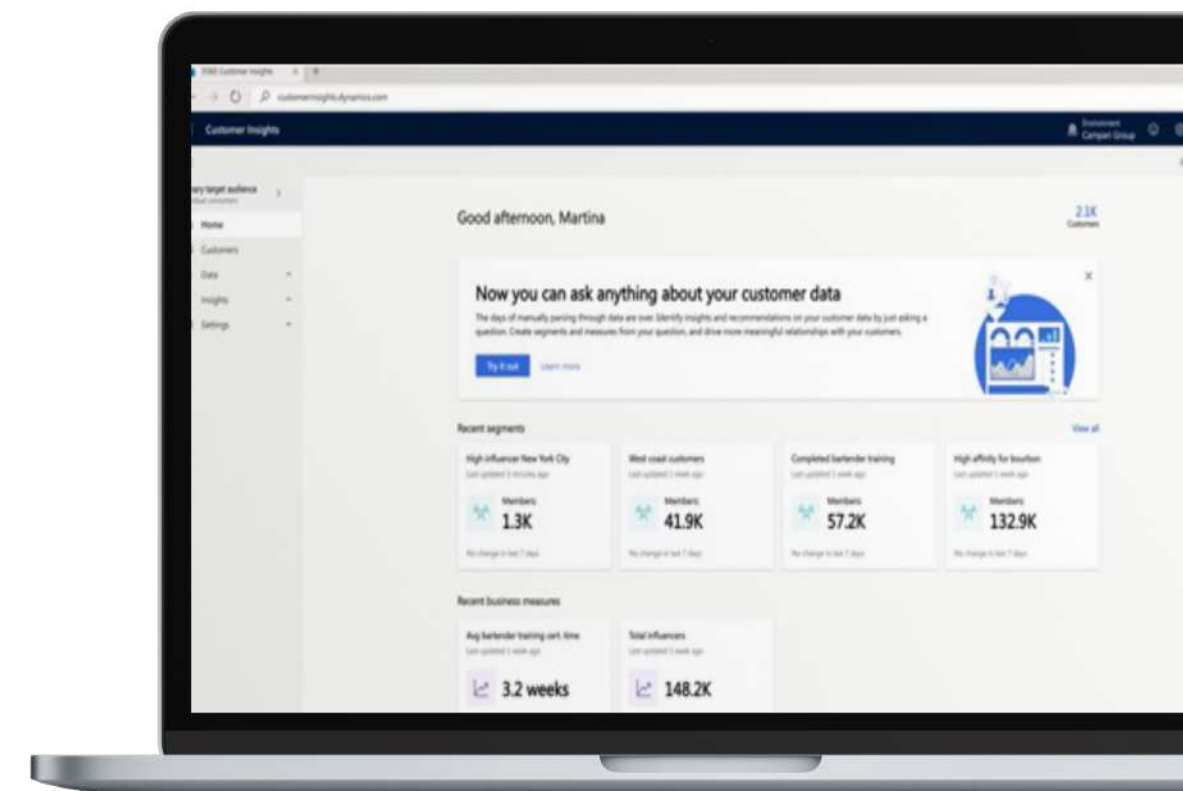

KEY FEATURES AND FUNCTIONALITY

Dynamics 365 Copilot is transforming the next era of business applications. Offering a range of Gen AI-powered expertise, it brings the latest AI breakthroughs to every line of business, improving customer experience, employee experience, and operational efficiency.

Dynamics 365 Copilot enables organizations to unlock the full creativity of their workforce, accelerating their pace of innovation and improving business outcomes in every line of business.

- **Marketing:** Marketers have traditionally relied on skilled data scientists and/or complex tools to uncover insights from customer data. But this approach is extremely time-consuming. Copilot in **Dynamics 365 Customer Insights** and **Dynamics 365 Marketing** empowers marketers to democratize access to insights and discover new information in minutes. Using Copilot, marketers can:
 - Curate highly personalized and targeted customer segments and engage in personalized dialogue using natural language.

Source: [Microsoft](https://www.microsoft.com/en-us/dynamics365/customer-insights)

With sellers spending as much as **66% of their day** checking and responding to emails, Copilot presents a significant business upside to give them more time with their customers.

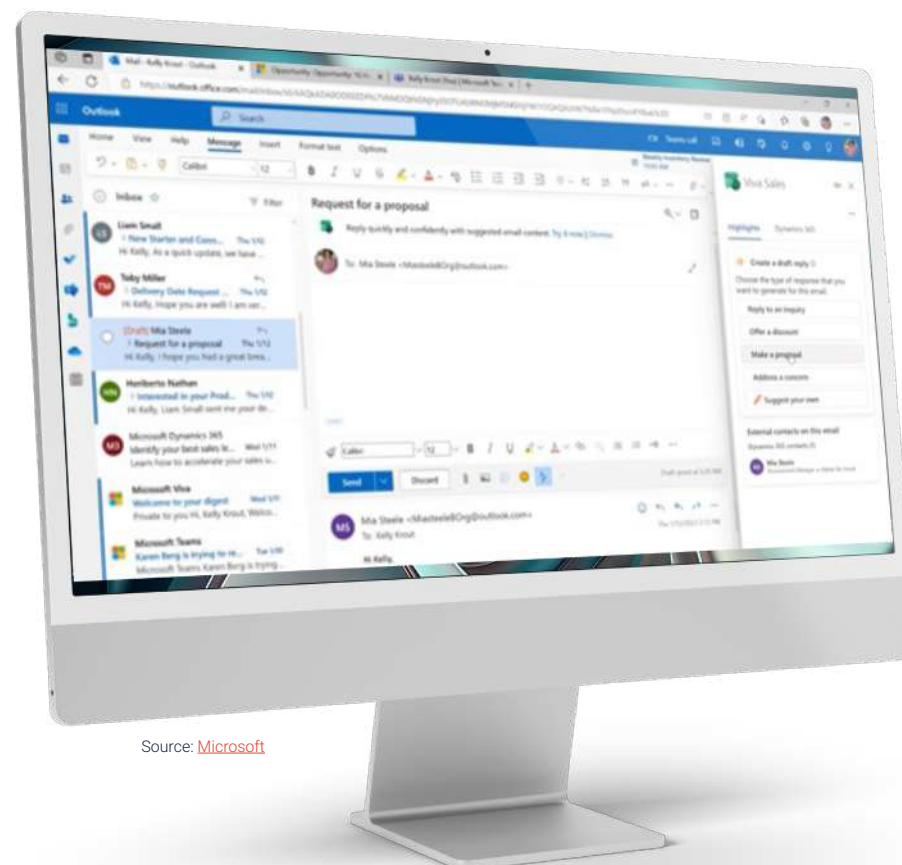

- **Copilot enables sales teams to:**

- Automate email responses to customers while also creating an email summary of meetings in Outlook.
- Get content suggestions based on customer emails and more accurately craft communication that addresses their specific needs.
- Leverage AI-powered insights and actions to augment sellers' actions and decisions.
- Streamline and scale the sales process by acting on automated summaries of key topics and issues and boost productivity and efficiency.
- Minimize unnecessary workload and stay focused on connecting with customers and closing deals.

- Draft contextual answers to queries in both chat and email with a single click and deliver better customer experiences.
- Build virtual agents in minutes while harnessing the power of Azure OpenAI Service and Bing.
- Use AI insights to diagnose complex customer issues and plan necessary resolutions.
- Offer customers enriched self-service capabilities to get contextual answers to queries and instant resolution to issues.

- **Customer Service:** Customer service agents play a huge role in driving customer loyalty. But the constant deluge of customer cases often leads to burnout. Copilot in Dynamics 365 Customer Service facilitates agents to deliver exceptional customer care. Using Dynamics 365 Copilot, customer service agents can:

- Enjoy 24/7 AI-powered assistance to resolve issues faster, handle cases more efficiently, and automate time-consuming tasks.

Source: [Microsoft](#)

We're making it easier for customer service departments to build virtual agents in minutes with **conversation boosters in Power Virtual Agents**, which harnesses the power of Azure OpenAI Service and Bing to provide answers from company websites and internal knowledge bases that you choose.

- **Operations:** Presenting compelling product descriptions is critical to making products stand out in the market. However, constantly producing engaging descriptions can be challenging, especially for large SKUs. Copilot in **Dynamics 365 Business Central** streamlines the process of product listings for online commerce. Using Copilot, organizations can:

- Craft engaging product descriptions using product attributes such as color, material, and size.

- Tailor listings to suit different audiences by choosing the right tone of voice, format, and length.
- Seamlessly publish products with descriptions to e-commerce stores in just a few clicks.
- Create ideas and content faster, complete time-consuming tasks, and get insights on the next best action.

REAL-WORLD USE CASES

- **Supply Chain:** Many businesses today continue to struggle with their supply chain processes – thanks to the constant disruption. Copilot in **Dynamics 365 Supply Chain Management** enables organizations to effectively manage their business – despite the fluctuating environment. Using Copilot, they can:
 - Automatically draft emails to alert impacted partners and mitigate potential disruptions before they happen.
 - Quickly identify new ETAs and re-route purchase orders based on identified disruptions.
 - Fulfill high-priority customer orders via an alternate distribution center and meet customer demand on time.
- Proactively predict and flag external issues such as weather, financials, and geography that may impact key supply chain processes.
- Get predictive insights across materials, inventory, carriers, distribution networks, and more.

As workforce productivity becomes a top priority for businesses across sectors and segments, Dynamics 365 Copilot helps streamline complex workflows. Via intelligent automation, it enables employees across sales, marketing, and customer service roles to better comprehend customer needs and concerns, craft contextual responses, and enhance engagement and experience. By enabling employees to save tremendous time on mundane activities, it paves the way for predictive, data-driven, smart decision-making. Here's how Dynamics 365 Copilot offers benefits for real-world use cases:

Through intelligent suggestions and recommendations, it allows for the automation of time-consuming tasks. This enables agents to handle cases more efficiently and focus on delivering high-quality service to customers.

3. Marketing Campaign Optimization: Targeting the Right Audience

Dynamics 365 Copilot enables marketers to create and optimize marketing campaigns in minutes. They can mention campaign elements in natural language and allow Copilot's built-in generative AI capabilities to build the right content. By minimizing the time spent gathering and personalizing content, marketers can focus on driving engagement and ensuring campaign alignment.

4. Finance and Operations: Improving Cost Management

For financial teams struggling with cost management, Dynamics 365 Copilot helps reduce the unpredictability of operational costs. By offering deep visibility into workload-related spending, teams can more easily analyze spending patterns and anomalies that drive up costs. They can accordingly set budgets, distribute costs across business units, and spot opportunities for optimization.

1. Sales Team Empowerment: Closing Deals

Faster Dynamics 365 Copilot enables

sales teams to automatically capture, access, and register data into their CRM system. It eliminates manual data entry and gives sellers more time to focus on selling. Since each data set is enriched with customer engagement data from Microsoft 365, sellers can arm themselves with the sales intelligence they need for faster deal closure. They can lighten their workloads, improve their productivity, and devote more time and energy to sales.

2. Exceptional Customer Service:

Personalized Support with AI

Dynamics 365 Copilot offers several capabilities to revolutionize the agent experience. It provides real-time intelligent assistance to customer service agents, enabling them to resolve issues faster.

GETTING STARTED WITH DYNAMICS 365 COPILOT: BEST PRACTICES

As generative AI continues to advance and innovate, the application of Dynamics 365 Copilot is widespread. Here are some best practices to keep in mind while getting started with Dynamics 365 Copilot:

- 1. Assess readiness:** Dynamics 365 Copilot is enabled by default for all organizations in North America. Organizations in other regions need to manually set up Copilot, which can be done in a few easy steps. But before they do so, they must assess the readiness of users to leverage these cutting-edge capabilities. Educating them on the many features and benefits of Copilot is a critical step organizations must take to determine their willingness and address early concerns around adoption.
- 2. Maintain good content:** Dynamics 365 Copilot relies largely on data to drive accurate suggestions and recommendations. To ensure it uses the right data, it is important for organizations to update their content management practices. They must also relook their existing permissions and policies to ensure Copilot delivers the most relevant information.
- 3. Ensure data security:** Although all data exchanges in Dynamics 365 Copilot are handled according to Microsoft's data management guidelines, it is important for organizations to comply with necessary data privacy regulations. Establishing the right data governance and access controls can go a long way in ensuring the data used by Dynamics 365 Copilot adheres to the required set of compliance obligations.
- 4. Enable user training:** Dynamics 365 Copilot offers a bunch of ready-to-use intelligent capabilities that streamline day-to-day tasks. However, to better understand the many intricacies, organizations must conduct regular training sessions. These sessions can help in offering insights into Copilot's functionality as well as encourage the use of AI in a responsible and ethical manner.
- 5. Stay up to date:** With the pace of gen-AI advancement, it becomes critical for organizations to stay up to date with the latest Dynamics 365 Copilot features, changes, and announcements. Visiting the Microsoft message center and constantly studying the latest updates can help organizations in making the most of all that's new.

Essential to our approach as we bring these latest advancements to customers is our commitment to responsible AI by design – our framework for the safe deployment of AI technologies.

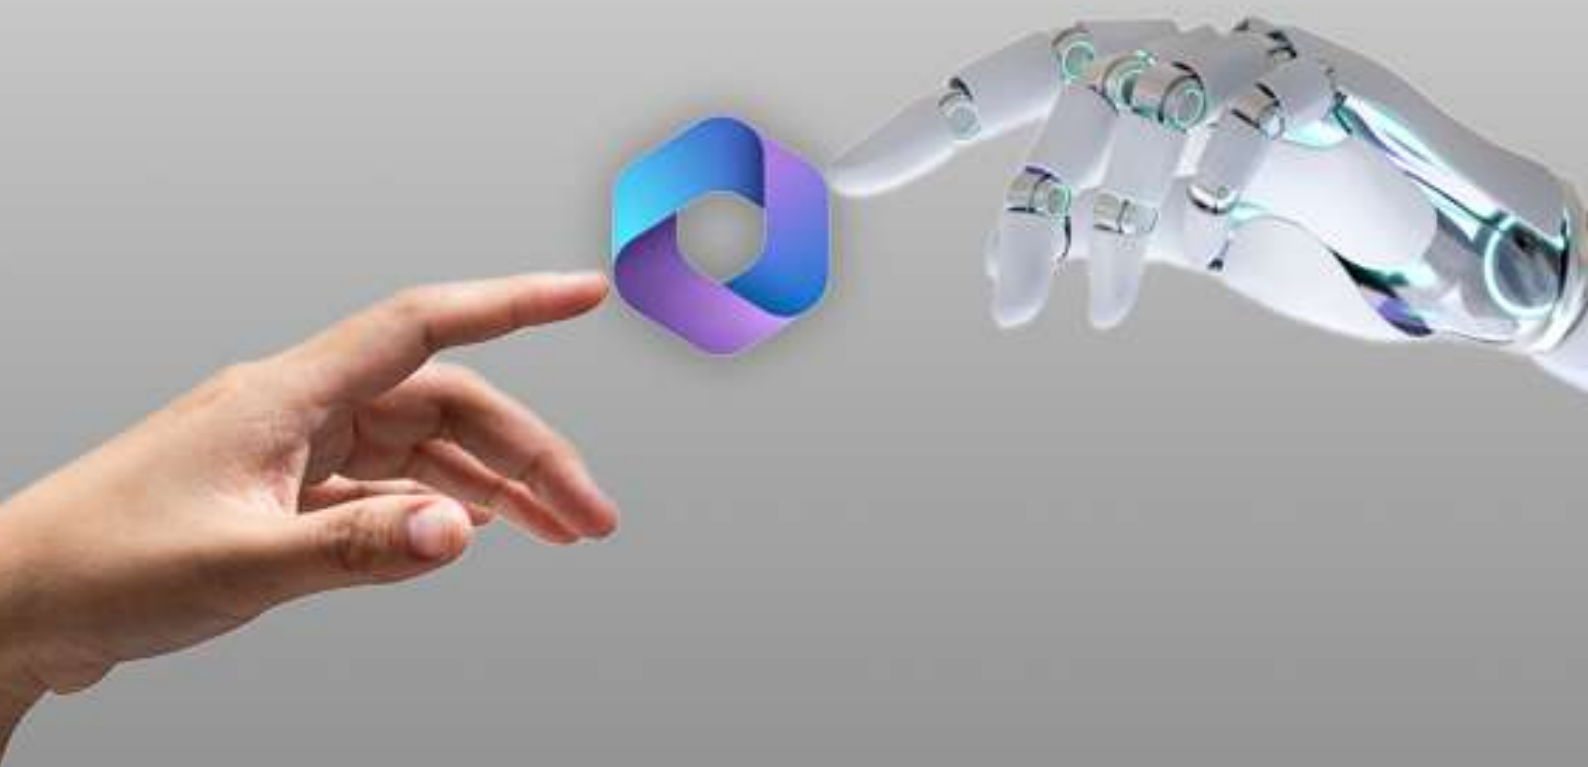

THE ROAD AHEAD

ChatGPT and other generative AI tools have taken the world by storm. As humans begin exploiting these new-age technologies in their personal and professional lives, Dynamics 365 Copilot opens doors to next-gen AI in every line of business. From marketing and sales to customer service, supply chain, and operations – this AI-powered assistance is poised to enable the workforce to become more efficient and productive.

With generative AI carving the future of technology, [Microsoft](#) is committed to investing in continued Copilot advancements. Bringing exciting new opportunities, Dynamics

365 Copilot will help automate mundane activities and minimize workplace stress. By offering intelligent capabilities that complement human expertise and skillset, Dynamics 365 Copilot will empower business professionals across all departments to expedite workflows, enable process efficiencies, and boost business outcomes. Supercharge your business with Dynamics 365 Copilot today! Embrace the power of Copilot for enhanced productivity and efficiency with Synoptek!

ABOUT SYNOPTEK

Synoptek delivers accelerated business results through advisory-led, transformative full-life-cycle systems integration and managed services. We partner with organizations worldwide to help them navigate the ever-changing business and technology landscape, build solid foundations for thier business, and achieve their business goals.
