

Security Management in D365 FO

Security in Microsoft Dynamics 365 Finance & Operations (D365 FO) is a complex but crucial topic. This article provides a guide on Role-Based Security, offering foundational knowledge to help you understand and customize security within the system.

1. Overview of Security in D365 FO

How Security Works

- **Azure Active Directory (AAD) Account:** Every user must have an AAD account to access D365 FO.
- **Creating Users in D365 FO:** After creating an AAD account, you need to create a user record in the system using an admin account.
- **Role Assignment:** Users are assigned Roles, which determine what **Menu Items** they can access in the system.

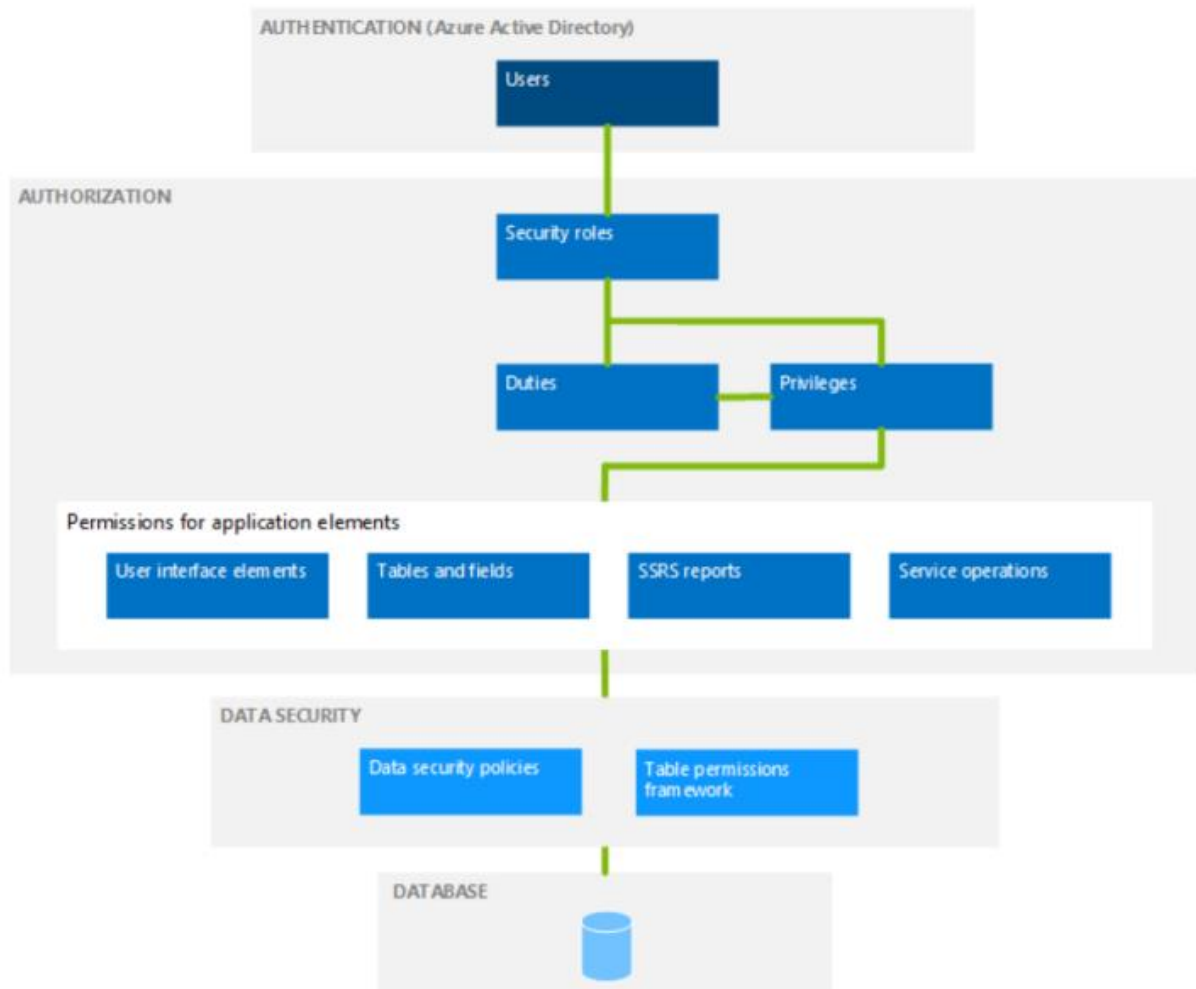

Security Structure

Permissions are not assigned directly to users or Menu Items. Instead, they follow a hierarchical structure:

- **Privileges:** Group similar Menu Items.
- **Duties:** Group multiple Privileges.
- **Roles:** Group multiple Duties.

Access Levels

- Access levels define what users can do with a Menu Item: **Read, Update, Create, Delete, or Correct.**

2. Security Structure in D365 FO

The security structure in D365 FO is organized hierarchically:

- **Menu Item** → Part of **Privilege** → Part of **Duty** → Part of **Role** → Assigned to users.

Example

- **System Administrator Role:**
 - This role contains all Duties and Privileges, granting full access (Read, Update, Create, Delete).
- **Accounts Receivable Clerk Role:**
 - This role only contains Duties and Privileges related to the Accounts Receivable module, limiting access.

Benefits of Security Structure

- **Ease of Management:** Users don't need individual permissions assigned.
- **Flexibility:** A Menu Item can belong to multiple Privileges, and a Privilege can belong to multiple Duties.

3. How to Create Users and Assign Roles

Create a New User

- Go to **System Administration > User > Users**.
- Click **New** and input:
- **User ID:** User identifier.
- **User name:** Display name of the user.
- **Provider:** Choose AAD
- **Email:** User's email address.
- **Default Company:** The user's default company in D365 FO.
- Click **Save** to save the record.

The screenshot shows the 'Users' form in Microsoft Dynamics 365 Finance and Operations. The form is titled 'pramer : Peter Ramer'. Below the title, there is a 'User details' section with the following fields:

User ID	User name	Provider	Email	Telemetry ID	Company	Person	Enabled
pramer	Peter Ramer	https://sts.windows.net/junct...	pramer@junctionsolutions.co...	001A18C0B-9AF1-45F4-9985...	USBT		☒ Yes

Assign Roles to Users

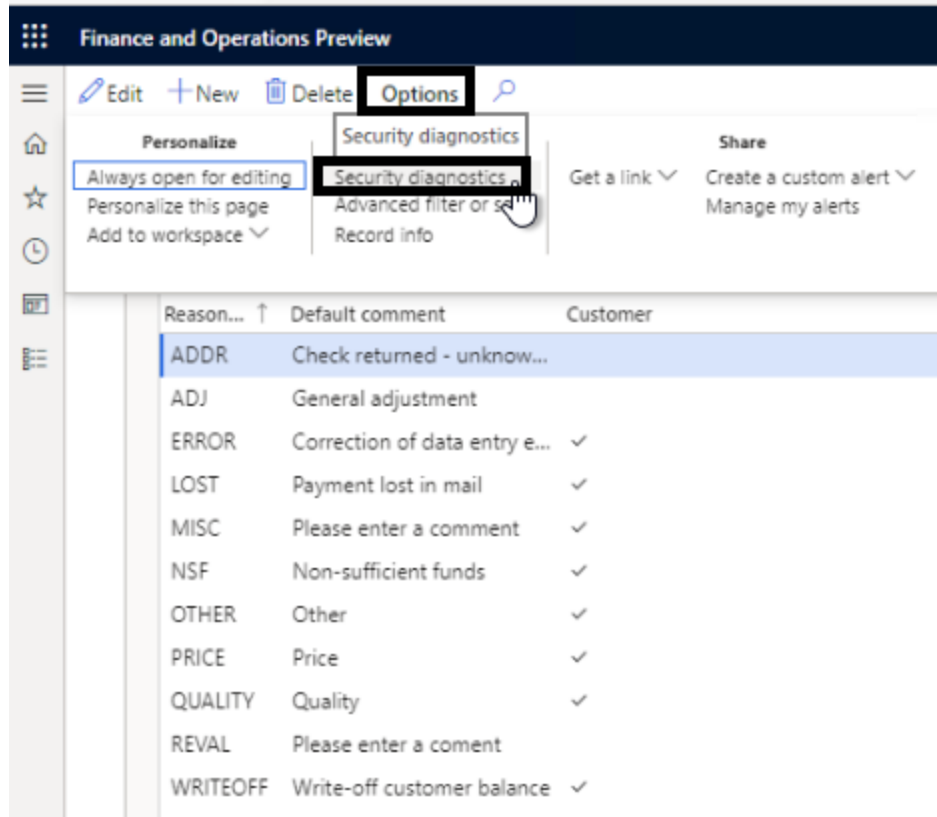

1. In the **Users** form, select the user to assign roles.
2. Click **Assign roles**.
3. In the dialog box, select one or more roles by checking the radio boxes.
4. Click **OK** to confirm.

4. Determining the Right Roles for Users

There are two main approaches:

Approach 1: When you know the Menu Item to access

- [illegible]

The **Security diagnostics** dialog will show all of the **Roles**, **Duties** and **Privileges** that have access to this **Menu Item**.

Click the '**Show object identifiers**' blue link to show the **Application Object** name of the security object.

Security diagnostics

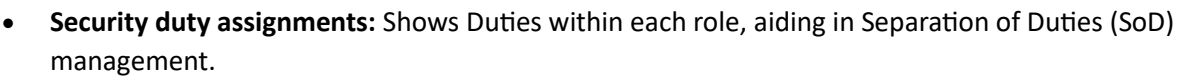

This is the list of security objects that grant the active security entry point.

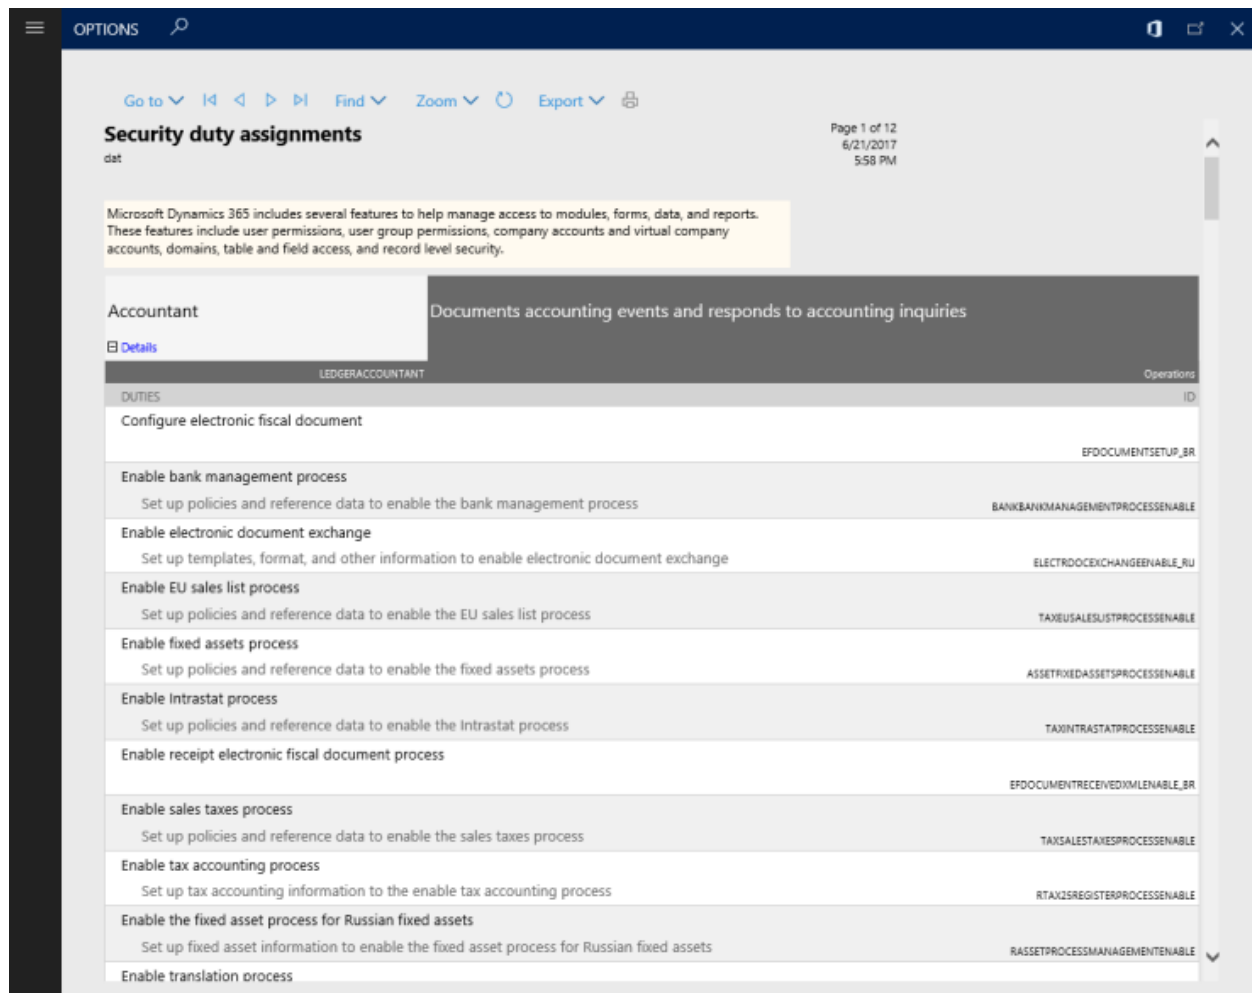

[Add roles to user](#) [Hide object identifiers](#)

☐ Filter			
☐ Object identifier	Object type	Label

Approach 2: When you want to check a Role's Menu Items

- Go to **System administration > Inquiries > Security > Security role access** to generate a report. This report lists the Menu Items and their Access Levels provided by each role.
- Alternatively, temporarily assign a Role to a user, log in as the user, and verify the accessible Menu Items.

7. Conclusion

This article provides a foundational understanding of security management in D365 FO, from creating users, assigning roles, to understanding the security structure. This ensures users are granted appropriate permissions while optimizing security management.

In the next article, we will explore **customizing security**, including creating new Roles, Duties, and Privileges to meet specific business requirements.
